Middle Swing Control Box

2900 Series, 9700 Series

Senior Swing Control Box

2800 Series, 9500 Series

Installation Instructions
IMPORTANT

These instructions are presented in step-by-step sequence. It is very important that installation begins with “1. Pre-Installation Site and Product Check” (page 3) and continues as directed after each section.

WARNINGS

- Always disconnect main power to the operator prior to replacing.
- Control box contains no serviceable parts inside.

GENERAL INFORMATION

The Middle and Senior Swing Control Boxes are for use with the Middle and Senior Swing Power Operator Systems, respectively. The systems can operate a single door (2810, 9530, 9540, 2910, 9730, and 9740 Series), a simultaneous pair of doors (2850, 9550, 2950, and 9750 Series), or an independent pair of doors (2860, 9560, 2960, and 9760 Series).

ANSI/BHMA A156.19 Compliance

The Middle and Senior Swing Power Operator Systems are low energy products and must conform to the latest version of ANSI/BHMAA156.19 (American National Standard for Power Assist and Low Energy Power Operated Doors).

Installation Instructions

All installation instructions are valuable references and should be given to the building owner or maintenance supervisor after installation is complete.

The Middle and Senior Swing Control Box installation instructions and the manufacturer’s instruction manual accompanying any sensor must be referenced to ensure proper installation, setup, and operation.
**AC input voltage** ..................................................... 120 VAC
**AC fuse** .................................................................. 120 VAC, 2.5 A time-delay fuse
**Motor protection** ..................................................... Solid state failure detection and shutdown
**Activate inputs** ....................................................... dry NO contacts (close contacts to open door)
**Safety inputs** .......................................................... dry NO contacts (closed contacts indicate an obstruction)
**Breakaway input** .................................................... dry NC contacts (open contacts indicate breakaway)
**3-position switch input** ............................................ dry 3-position switch
**Power Boost disable input** ...................................... dry NO contacts (close contacts to disable Power Boost
**Lock output** ............................................................ Form C dry relay contacts rated 8 A, 30 VDC maximum
**Accessory power output** ......................................... 24 VAC, 1.5 A (protected by resettable thermal fuse)
**Logic power output** ................................................. 5 V, 50 mA (protected by resettable thermal fuse)

1.1. All required installation steps listed before “8. Control Box Installation” in the Astro/Middle/Senior Swing installation instructions (part No. 740132-00) should be completed before installing the Middle/Senior Swing control box.

1.2. Check that the control box model (indicated on control box label; Figure 1-1) is correct for the application.

1.3. Check that the available AC voltage matches the control box voltage requirement (120 VAC).

1.4. Check that all accessories required for the application are on hand.

---

**Figure 1-1**

**Label indicates model**

**WARNING:** ALL SPEED SETTINGS (OPENING, CLOSING AND LATCHING) AND HOLD-OPEN TIME-DELAY MUST BE ADJUSTED TO MEET LATEST APPLICABLE ANSI/ BHMA STANDARDS.
2. INSTALLATION

To install the Middle or Senior Swing Control Box, follow the Astro/Middle/Senior Swing installation instructions (part No. 740132-00) beginning with "8. Control Box Installation" on page 12 of those instructions.

**CAUTION**

Improper installation or set up may result in personal injury or property damage. Follow instructions carefully. For answers to questions, call LCN at: 1-800-526-2400

3. WIRING

- Review the separate wiring diagrams in the accessory instructions so that all wiring can be completed.
- See Figure 3-1 for system configuration terminology.
- See Figure 3-2, Figure 3-3, and Figure 3-4 for names and locations of control box connectors.
- See Figure 3-5 for control box plug and jack descriptions, wiring, and mating cables.
- See Figure 3-6 for electric strike locking device sample wiring.
- See Figure 3-7 for EL (electric latch retraction) locking device sample wiring.

**CAUTION**

When joining or separating a plug and receptacle, do not push or pull on wires. This may cause a wire to be pulled loose from a terminal, which may result in a malfunction.

![Figure 3-1](image-url)
3. WIRING (continued)

**Figure 3-2.** Control box power board connectors.

**Figure 3-3.** Control box logic board connectors.

**Figure 3-4.** Closeup of control box logic board connectors.
3. WIRING (continued)

**Bodyguard** (master; safety side): Prevents door from opening; holds open door in open position (uses door state data from control box to ignore door movement while opening/closing)

**DMSS** (master; safety side): Prevents door from opening, and slows an opening door

**DMSS** (master; approach side): Initiates a door opening cycle if activated while door is closing

**DMSS** (companion; safety side): Prevents door from opening, and slows an opening door

**DMSS** (companion; approach side): Initiates a door opening cycle if activated while door is closing

**Activate**: Initiates a door opening cycle

**Activate**: Initiates a door opening cycle (operates identically to P6 and is provided as a convenience if 2 activations are used)

**Retrofit Accessories**: Accesses older model Activate, Slow/Stop, and Carpet Safety inputs

**Breakaway**: Disables operator inputs when Breakaway switch is active

**3-Position Switch**: OFF, AUTO, HOLD

**Locking Interface**: Power output and relay contacts for locking devices; Power Boost disable input

**Companion Motor Power**: Companion motor power (use only for second door of simultaneous pair or independent pair of doors)

**Master Motor Power**: Master motor power (use for single door)

**AC Input**: 120 VAC

---

**Figure 3-5**

[Diagram showing wiring connections and labels for various components and connections.]
The keypad EL (electric lock) setting is SA (fail safe). When the operator is on, the strike is locked when the door is closed and unlocked when the door is opening. When the 3-position switch is set to OFF, the strike is unlocked.

The keypad EL (electric lock) setting is SE (fail secure). The control box locking relay signals the PS873 x 871-2. When the operator is on, the EL device is locked when the door is closed and unlocked when the door is opening. When the 3-position switch is set to OFF, the EL device is locked.

**Figure 3-6. Sample Wiring for a Fail Safe Electric Strike Locking Device**

Cut connector off rectifier, then connect using wire nuts

Control box lock supply rating: 24 VAC, 1.5 A

NOTE

Always wire the locking device to the NO (normally open) contact of the control box locking interface and use the keypad to set the EL (electric lock) setting to either SA (fail safe) or SE (fail secure).

The keypad EL (electric lock) setting is SA (fail safe). When the operator is on, the strike is locked when the door is closed and unlocked when the door is opening. When the 3-position switch is set to OFF, the strike is unlocked.

**Figure 3-7. Sample Wiring for a Fail Secure EL (Electric Latch Retraction) Locking Device**

When using an EL device such as EL33A, EL99, etc: Use 12 AWG stranded wire for outputs 01 and 02 between PS873 and EL device (200' run maximum).

The keypad EL (electric lock) setting is SE (fail secure). The control box locking relay signals the PS873 x 871-2. When the operator is on, the EL device is locked when the door is closed and unlocked when the door is opening. When the 3-position switch is set to OFF, the EL device is locked.
4. KEYPAD SETTINGS

Settings (except for close speed) for the Middle and Senior Swing Power Operator System are changed using keypad pushbuttons and an alphanumeric display on the Astro Swing control box (Figure 4-1 and Figure 4-2). Close speed is changed using dials on the control box (Figure 4-1).

See page 9 and page 10 for directions for changing the values of settings.

---

**CAUTION**

Adjust the operator for the slowest operation practical in accordance with the latest revisions of Americans with Disabilities Act, ANSI/BHMA A156.19 (American National Standard for Power Assist and Low Energy Power Operated Doors), and local codes.

---

**Figure 4-1. Control Box Panel with Keypad**

**Figure 4-2. Closeup of Control Box Keypad**
4. KEYPAD SETTINGS (continued)

WARNING

KEEP HANDS, CLOTHING, WIRES, TOOLS, LADDERS, ETC. AWAY FROM THE DOOR WHEN THE OPERATOR IS INITIALLY TURNED ON.

See Figure 4-3 for definitions of the positions of the door throughout the opening and closing cycle.

See Table 4-1 for explanations of the keypad settings.

To change setting values:

1. Set the 3-position switch, if used, to OFF.
2. Apply AC power. The POWER light will illuminate and the display will remain blank.
3. Press any two pushbuttons at the same time for 1 second to turn on the keypad. The display will illuminate.
4. Press the UP or DOWN setting selection pushbutton to select the desired setting. The setting is shown in the SETTING display, and the current value for that setting is shown in the VALUE display.
5. Press the UP or DOWN value selection pushbutton to select the desired value for the displayed setting. The value for the setting is indicated in the VALUE display.
6. The keypad will automatically turn off after 5 minutes of inactivity.

To reset all values to default (default values are listed in Table 4-1 under “Selectable Values”):

1. Set the 3-position switch, if used, to OFF.
2. Apply AC power. The POWER light will illuminate, and the display will remain blank.
3. Press any two pushbuttons at the same time for 1 second to turn on the keypad. The display will illuminate.
4. Press the DEFAULT pushbutton for 4 seconds.
5. The values are set to default, and the display will indicate the opening speed setting and value.
6. The keypad will automatically turn off after 5 minutes of inactivity.

Figure 4-3. Door Position Definitions
Safety side Door Mounted Safety Sensor (DMSS) disable feature

**Purpose:**
Deactivate the Door Mounted Safety Sensor (DMSS) on safety side of door to eliminate nuisance detection of a wall or guard rail.

1. Install control box, all door hardware and safety devices per their instructions.
2. Setup DMSS sensors in accordance with ANSI standard 156.10.
3. Use keypad to set SAFETY SLOW/STOP (SS) value to STOP (SP).
4. Use keypad to set SLOWDOWN DISABLE (SD) value to 85.
5. Activate door opening cycle. If door does not open fully, use keypad to reduce SD value from 85 in 5 degree increments.
6. Repeat Step 5 until door opens fully.
7. Perform a complete system test as described in the section 5.
### Table 4-1. Control Box Settings and Selectable Values

<table>
<thead>
<tr>
<th>Setting</th>
<th>Setting Display</th>
<th>Selectable Values</th>
<th>Values as Displayed</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Opening Speed</td>
<td>0S</td>
<td>01 = slow 02 = medium 03 = fast</td>
<td>01 02 03</td>
<td>Controls opening speed of any normal weight and size door</td>
</tr>
<tr>
<td>back check Speed</td>
<td>bS</td>
<td>01 = 1 door 02 = 2 doors (default = 01)</td>
<td>01 02</td>
<td>Controls speed of door near full open position to prevent door slamming open</td>
</tr>
<tr>
<td>back check Position</td>
<td>bP</td>
<td>45-80 degrees (default = 70)</td>
<td>45-80</td>
<td>Approximate angle at which door begins to decelerate near the full open position</td>
</tr>
<tr>
<td>hold open delay</td>
<td>hD</td>
<td>01-32 seconds (default = 05)</td>
<td>01-32</td>
<td>Amount of time (in seconds) door remains fully open following an activate signal</td>
</tr>
<tr>
<td>Latch Position</td>
<td>LP</td>
<td>00-23 degrees (default = 13)</td>
<td>00-23</td>
<td>Approximate angle at which door begins to decelerate near the full closed position</td>
</tr>
<tr>
<td>Auto reverse Closing</td>
<td>RC</td>
<td>off, on (default = off)</td>
<td>OFF ON</td>
<td>When on, door will re-open upon hitting an obstruction</td>
</tr>
<tr>
<td>Electric Lock</td>
<td>EL</td>
<td>SA = fail safe SE = fail secure</td>
<td>OFF SA SE</td>
<td>To turn on, set to SA (fail safe) or SE (fail secure) to match locking device connected to control box locking interface receptacle (P10); when on, causes a 1 second delay between activate signal and door opening to allow time for most electric locks to disengage before operator opens door</td>
</tr>
<tr>
<td>Power boost</td>
<td>PB</td>
<td>off 5 seconds continuous (default = off)</td>
<td>OFF SS CN</td>
<td>When on, increases closing force of door from 9 lbs to 18 lbs to close door against high winds or stack pressure; turns on for 5 seconds or continuously after door reaches latch position during closing cycle; disabled by Power Boost disable input</td>
</tr>
<tr>
<td>Push ‘N’ Go</td>
<td>PG</td>
<td>off, on, fd (default = off)</td>
<td>OFF ON FD</td>
<td>When set to On or Fd, pushing door open 5 degrees causes operator to open door remainder of way and hold open. Hold open time is same as hd setting when set to On. Hold open time is 1 second when set to Fd.</td>
</tr>
<tr>
<td>Alternate Activate</td>
<td>RA</td>
<td>off, on (default = off)</td>
<td>OFF ON</td>
<td>When on, door stays open until a second activate signal is received</td>
</tr>
<tr>
<td>Safety Slow/Stop</td>
<td>SS</td>
<td>slow, stop (default = slow)</td>
<td>SL SP</td>
<td>Determines response to a DMSS on the safety side of the door; if SL (slow), door goes to back check speed; if SP (stop), door stops for 5 seconds, then continues opening at back check speed</td>
</tr>
<tr>
<td>Slowdown disable</td>
<td>SD</td>
<td>off, 30-85 (increments of 5)</td>
<td>30-85</td>
<td>Used when DMSS detects nearby wall or guard rail while opening. Set to highest approximate angle that normal door operation will allow. When enabled, slowdown ignored at all angles greater than value displayed.</td>
</tr>
<tr>

5. SYSTEM TEST

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>KEEP HANDS, CLOTHING, WIRES, TOOLS, LADDERS, ETC. AWAY FROM THE DOOR WHEN THE OPERATOR IS INITIALLY TURNED ON.</td>
</tr>
</tbody>
</table>

If control box does not operate as expected during system test, see section 6 for troubleshooting tips.

5.1. With the door closed, set the 3-position switch, if used, to AUTO and turn on all AC power. For applications using companion door, try to get both doors to open same amount of degrees before hitting hard stop (either internal gearbox stop or rubber bumper on wall).

5.2. Activate the operator using an activation device. The operator should perform one sizing cycle.

**Sizing Cycle:** Occurs when the door is activated for the first time after power is turned on. During the sizing cycle, the door opens and closes once.

If the door sizes properly, go to step No. 5.3.

If the door does not open at all during the sizing cycle:

- Check that the 3-position switch, if used, is not set to OFF.
- Check door for binds and proper mechanical installation.
- Verify that all safety sensors are inactive.
- If an electromechanical lock is used, check that the lock disengages before the operator opens the door.
- Verify that the Breakaway switch, if used, is connected to NC contacts. If a Breakaway switch is not used, check that the Breakaway cable coming from the control box logic board is jumpered (jumper part No. 81269).
- Check fuse, wiring, and connections.
- Adjust the operator as follows and check door operation:
  
  - Opening speed: ................. 01
  - Back check speed: ............ 01 for one door, 02 for two doors
  - Hold open delay: .............. 05
  - Back check position: ......... 75
  - Latch position: ............... 10
  - Close speed: .................. medium
  - Electric lock: .................. SA (fail safe) or SE (fail secure) to match lock

If the door does not open fully during the sizing cycle, check door for binds, obstructions, or items that could activate safety sensors.
5. SYSTEM TEST (continued)

5.3. After the sizing cycle is complete and the door is closed, apply a maintained activation signal and check that the door remains open while the activation signal is applied. Then release the activate signal and verify door closes after the open time delay expires.

5.4. To check the function of the door safety device:

5.4.1. Activate the door and then activate the approach side safety device while the door is open. The door should not close while the safety device is activated. Next, deactivate the safety device. The door should close after the hold open time delay expires.

5.4.2. With the door closed, activate the safety side safety device, then activate the door. The door should not open while the safety device is activated. Next, deactivate the safety device. The door should open when activated.

5.5. Set the 3-position switch, if used, to HOLD. Verify that the door opens and stays open.

5.6. Set the 3-position switch, if used, to OFF. Verify that the door closes. Verify that an activate signal does not open the door.

5.7. If a Breakaway switch is connected, set the 3-position switch, if used, to AUTO, then break open the door. Verify that an activate signal does not cause the door to move. Re-latch the door after testing.

5.8. Do not release the system for service until it is operating properly.

6. TROUBLESHOOTING

6.1. Identify all switch and sensor inputs that are currently active:

6.1.1. Remove breakaway jumper to enter diagnostic mode.

Note: When in diagnostic mode, controller will not open door.

6.1.2. Keypad display shows each active input signal for 1 second. See table below:

- (Key switch) set to Auto OR is not present \( SA80 \)
- (Key switch) set to OFF \( SA81 \)
- (Key switch) set to HOLD \( SA82 \)
- (Activate) input is ON \( SA83 \)
- (DMSS approach) activate input is ON \( SA84 \)
- (DMSS safety) slowdown input is ON \( SA85 \)
- (Carpet Safety) input is ON \( SA86 \)
- (Bodyguard) input is ON \( SA87 \)
- (Power Boost Disable) input is ON \( SA88 \)

For example, if key switch is set to Auto, Activate button is pressed, and DMSS sees something on the safety side, then display will repeat the sequence \( SA80, SA83, SA85 \) continuously until breakaway jumper is replaced.

6.1.3. After completing diagnostics, reinstall breakaway jumper for normal operation.
6. TROUBLESHOOTING (continued)

6.2. If control box does not function and the error message Er## flashes on the control box Setting and Value displays, turn AC power off and on to reset the control box. The following are common errors and suggested fixes:

- **ER 06**: Master motor problem - verify master motor cable is connected to motor.
- **ER 14**: Companion door added to a setup that was already sized - turn AC power off, then on and resize with both doors connected.

If problem cannot be corrected by using suggested fixes, contact 1-800-526-2400.

7. RELEASE FOR SERVICE

7.1. Remove all tools, installation equipment, and debris from the vicinity of the door.

7.2. Install all safety, traffic control, and instruction decals on the door as required by the latest revision of ANSI/BHMA A156.19. **This is very important! Failure to do this leaves the installer LIABLE for any accident that might occur. This must be done!**

7.3. Verbally instruct the owner or person in charge of the proper operation of the door.

7.4. Instruct the owner or person in charge to routinely inspect the door for the following:

- Visible damage
- Developing problems
- Minor preventive maintenance

7.5. Instruct the owner or person in charge who and where to call for service when required.

![IMPORTANT]

Make sure to install all safety, traffic control, and instruction decals on the door as required.
