

# C9150-3

## Setup Instructions

### for 2-way Security Revolving Doors

9.244d5

H915, JAN 2005

**Horton**  
AUTOMATICS

## OVERVIEW OF THE C9150 2-WAY SECURITY REVOLVING DOOR CONTROL

This manual contains very detailed instructions for successful setup and adjustment of the C9150 control. All wiring and initial run of the door can be accomplished by following the directions in sections 1 through 14.2. The remainder of the manual contains reference material for options and features that may not be required in all applications.

The concise table of contents will be useful to find the pertinent section of the instructions required for each application.

The C9150 control offers greater flexibility than any revolver control offered before. The operation of the door can now be changed with the keyswitch or remote control. Previously, these functions were changed by changing the firmware (eprom chip). The C9150 has expansion slots for additional input, output or specialized cards that can be added to expand the capabilities of this versatile control.

### THIS MANUAL CONTAINS THE FOLLOWING SECTIONS:

**BASIC SETUP & TESTING:** A step by step outline of the wiring, setup and testing of each part to be installed such as motor and brake, mats, nosing etc.

The sections below give detailed instructions on setting up the functions that are accessed by the keyswitch, remote control and the control itself. The remote may be password protected if desired.

**DIAGNOSTICS:** Used to setup and maintain the revolving door such as...

- Calculating the speed of the door in RPM's
- Testing the voice module.
- Global relearn which sets the safety sensitivity to an optimum level.
- Checking motor and brake voltage and current.

**MODE:** Defines how the door will be used

- Totally secure, card reader access for entry and exit.
- Card reader entry with free exit.
- Motion detector activation in and out
- Freewheel mode.

**PARAMETERS:** Cover such functions as...

- Door speed
- Time delays
- Reaction to, and force required for safety stops.
- Adjust card request storage, safety stops before idle and many other variables.

## INSTRUCTIONS TO INSTALLER

### SECURITY DOORS ARE COVERED BY ANSI 156.27 AND APPLICABLE BUILDING CODES

- This door is to be installed by an experienced installer, trained by Horton Automatics.
- To ensure safe and proper operation, the door must be installed and adjusted to conform to Horton Automatics recommendations and all code requirements.
- If there are any questions about these instructions, call Horton Automatics Technical Service (1-800-531-3111).

### INFORMATION TO BE PROVIDED BY THE DISTRIBUTOR TO THE OWNER

- After installation, instruct the owner on the safe operation of the door.
- Present the Owners Manual M910 (security) and explain how to perform the daily safety check.
- Location of power on / off switch.
- Necessary warnings not covered in these general instructions.
- Date equipment shipped from Horton Automatics.
- Date equipment placed in service.
- Horton Automatics' work order number for warranty reference.
- Equipment type.
- Accessories included.
- Phone number of local distributor to call regarding problems or request for service.
- Give caution** to owner: If a potentially hazardous situation is suspected, the door should be taken out of automatic service until a professional inspection is made and the problem is corrected.

## GENERAL REQUIREMENTS

- Power:(Switchable on the control)120 or 240, 50/60 Hz service to each unit.
- For remote switch locations, routing of low voltage class II wiring to the operator controls will be required.
- Remote switch locations should be predetermined and wired before installation begins.

# 1. BASIC SETUP (wiring motor, brake and encoder)

**NOTE:**

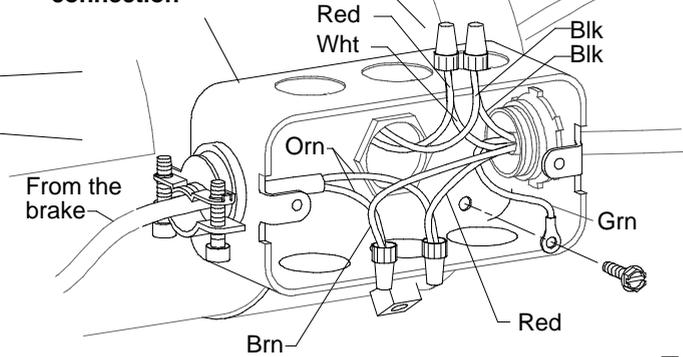

If the door runs backwards, when tested in section 6:  
 -Check that the gear drive is not upside down. "Top" should be stamped on the "up" side. The gear drive may be turned over to the correct position  
**OR...**  
 -Reverse the black and white leads at the CN 1 connection and reverse leads 2 & 3 (green & white) on the encoder

Brake, motor and encoder connections are factory installed. Illustrations are for reference only

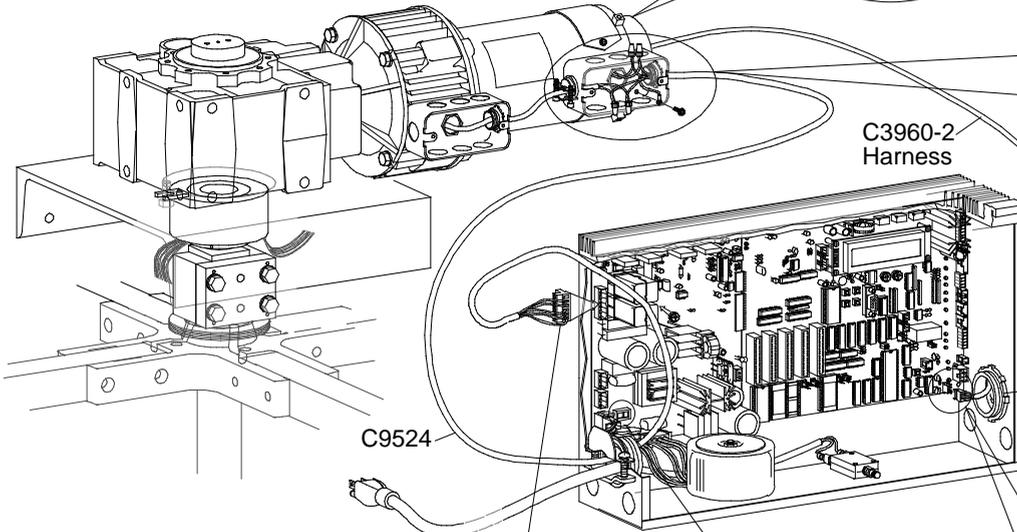

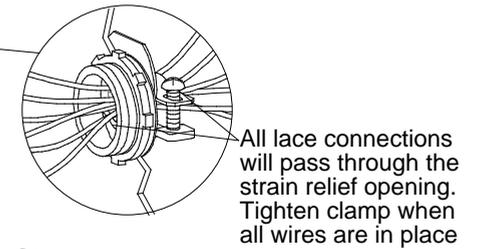

**Brake and motor connection**

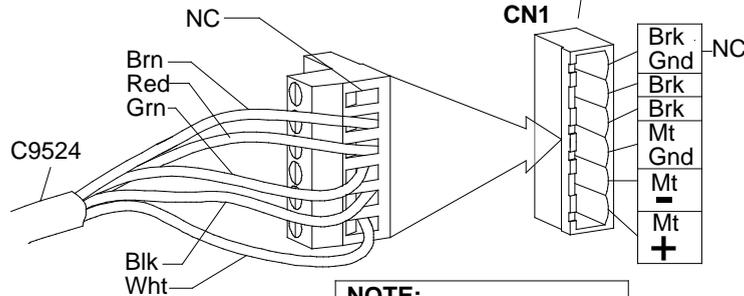

H915.3

**NOTE**  
Route all wiring through the 1 1/2" strain relief

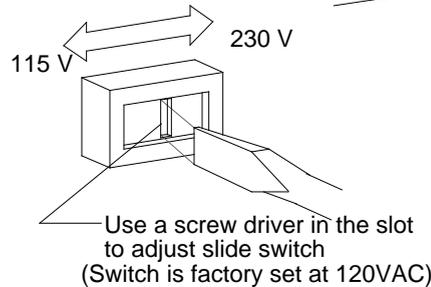

C3851-1  
6 foot (1829mm)  
power cord

**2nd Step**  
Brake and motor connection

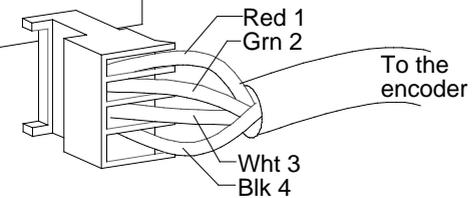

**NOTE:**  
DO NOT PLUG IN UNTIL LATER (SECTION 6)

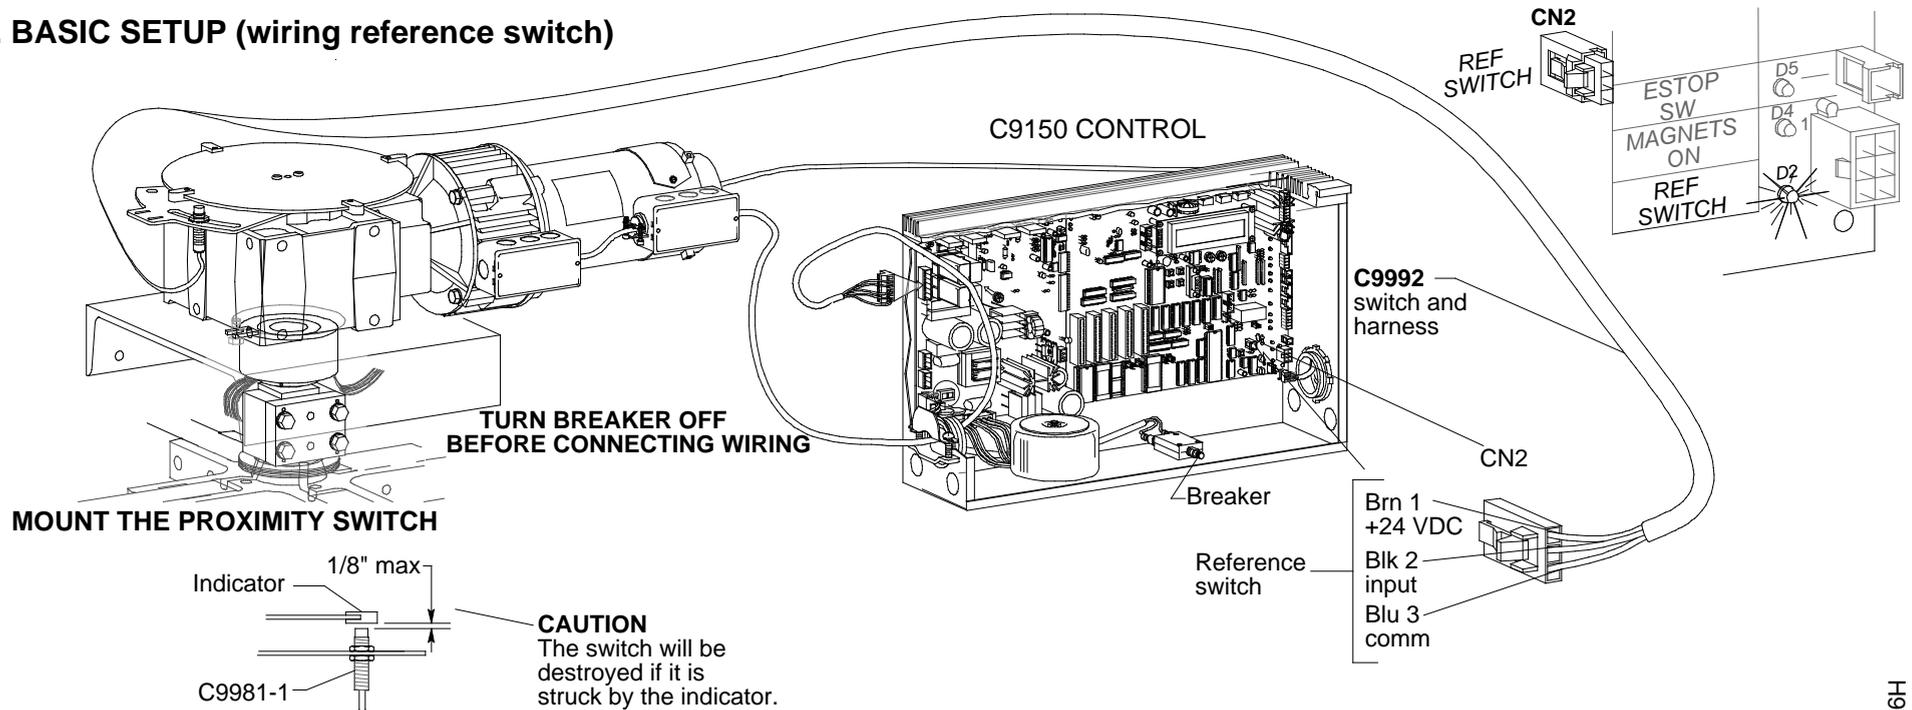

**1st Step**  
Check power supply for proper voltage setting

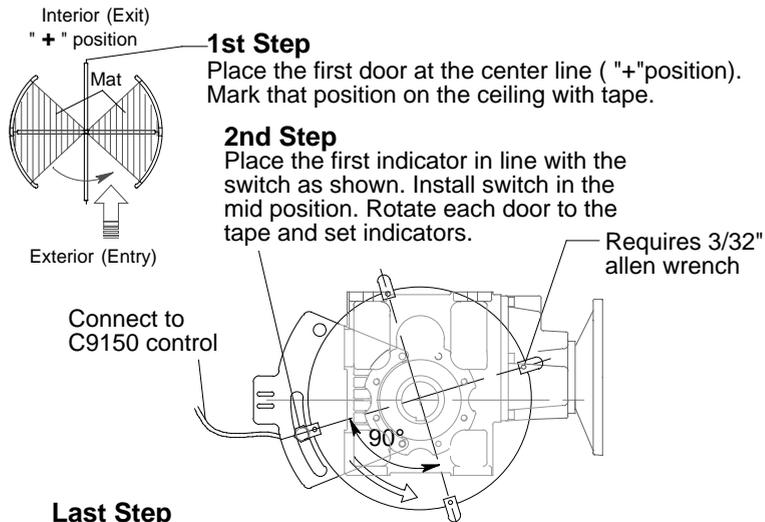

**3rd Step**  
Encoder connection at the control board

## 2. BASIC SETUP (wiring reference switch)

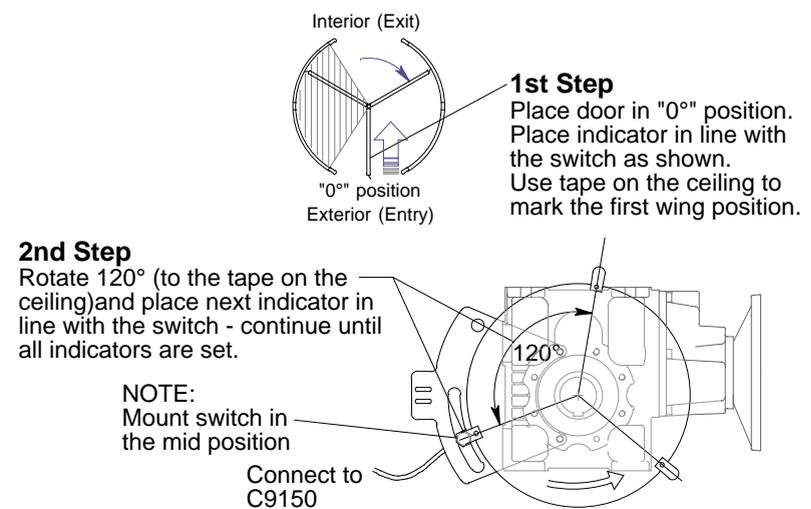

### INDICATOR SETUP FOR 4-WING

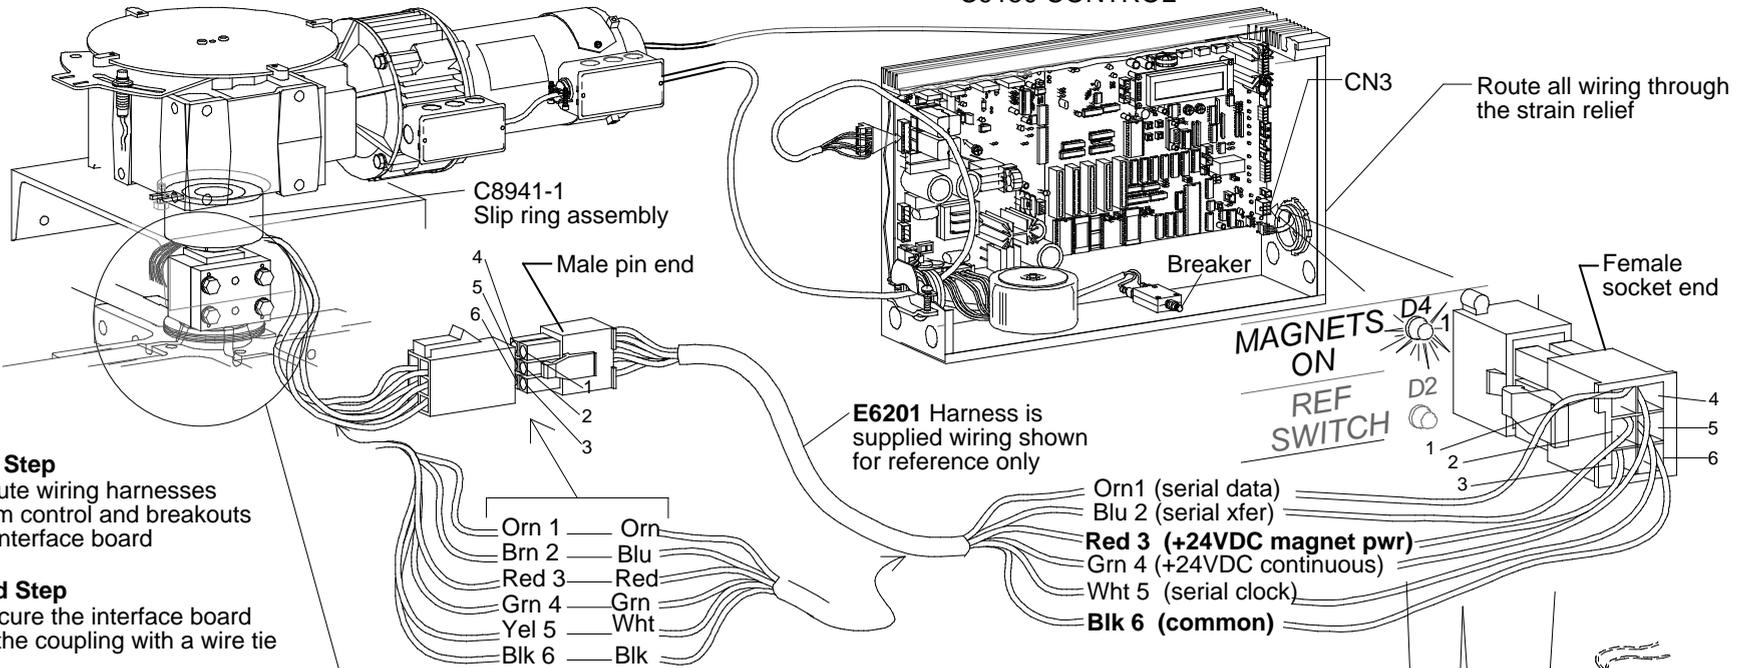

**NOTE:** After setup, **SLOWLY** rotate door and watch for proper alignment and no contact at all indicators. Turn breaker on and watch for the LED, D2, (see above) to light at each quarter position

### INDICATOR SETUP FOR 3-WING

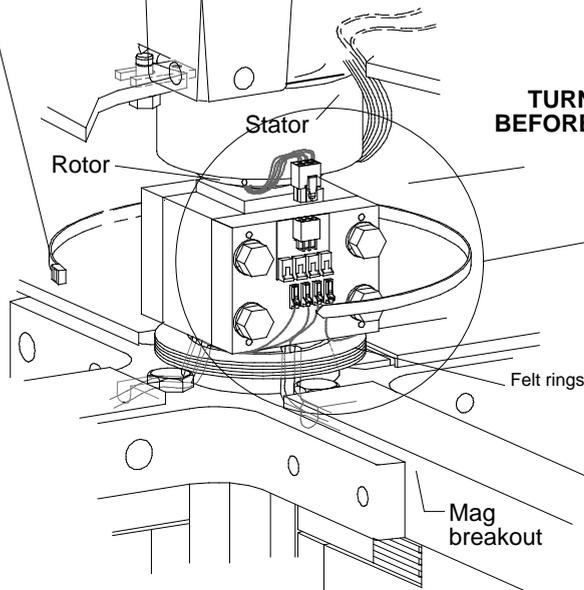

### 3. BASIC SETUP (wiring the slip ring assembly and magnetic breakout)

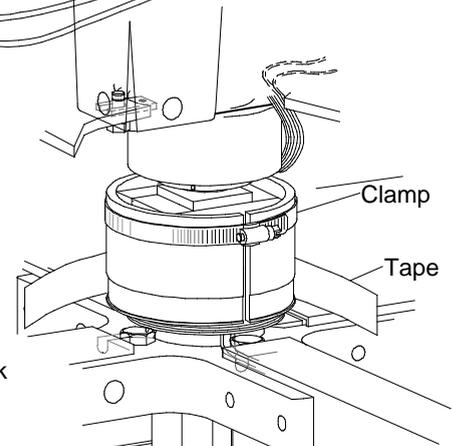

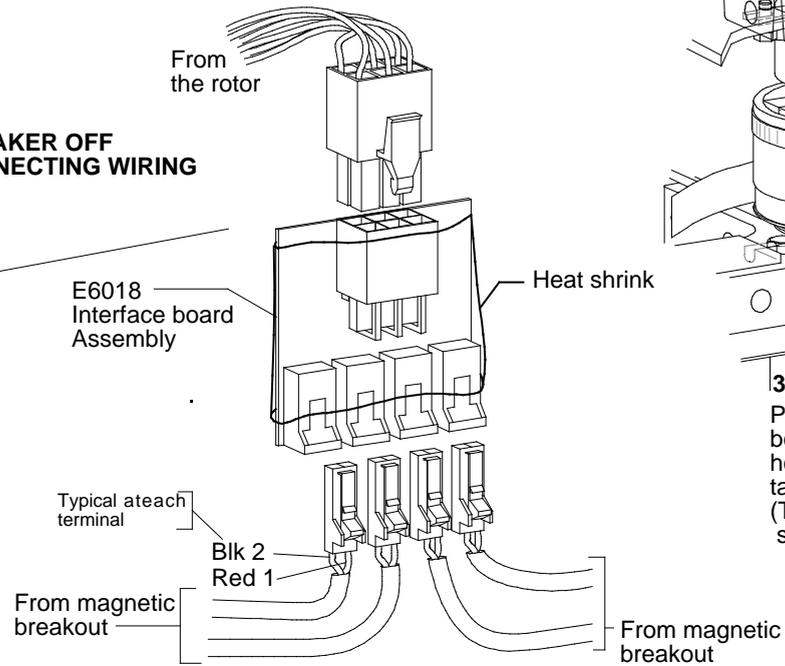

C9150 CONTROL

#### WIRING BREAKOUT MAGNETS

**TURN BREAKER OFF BEFORE CONNECTING WIRING**

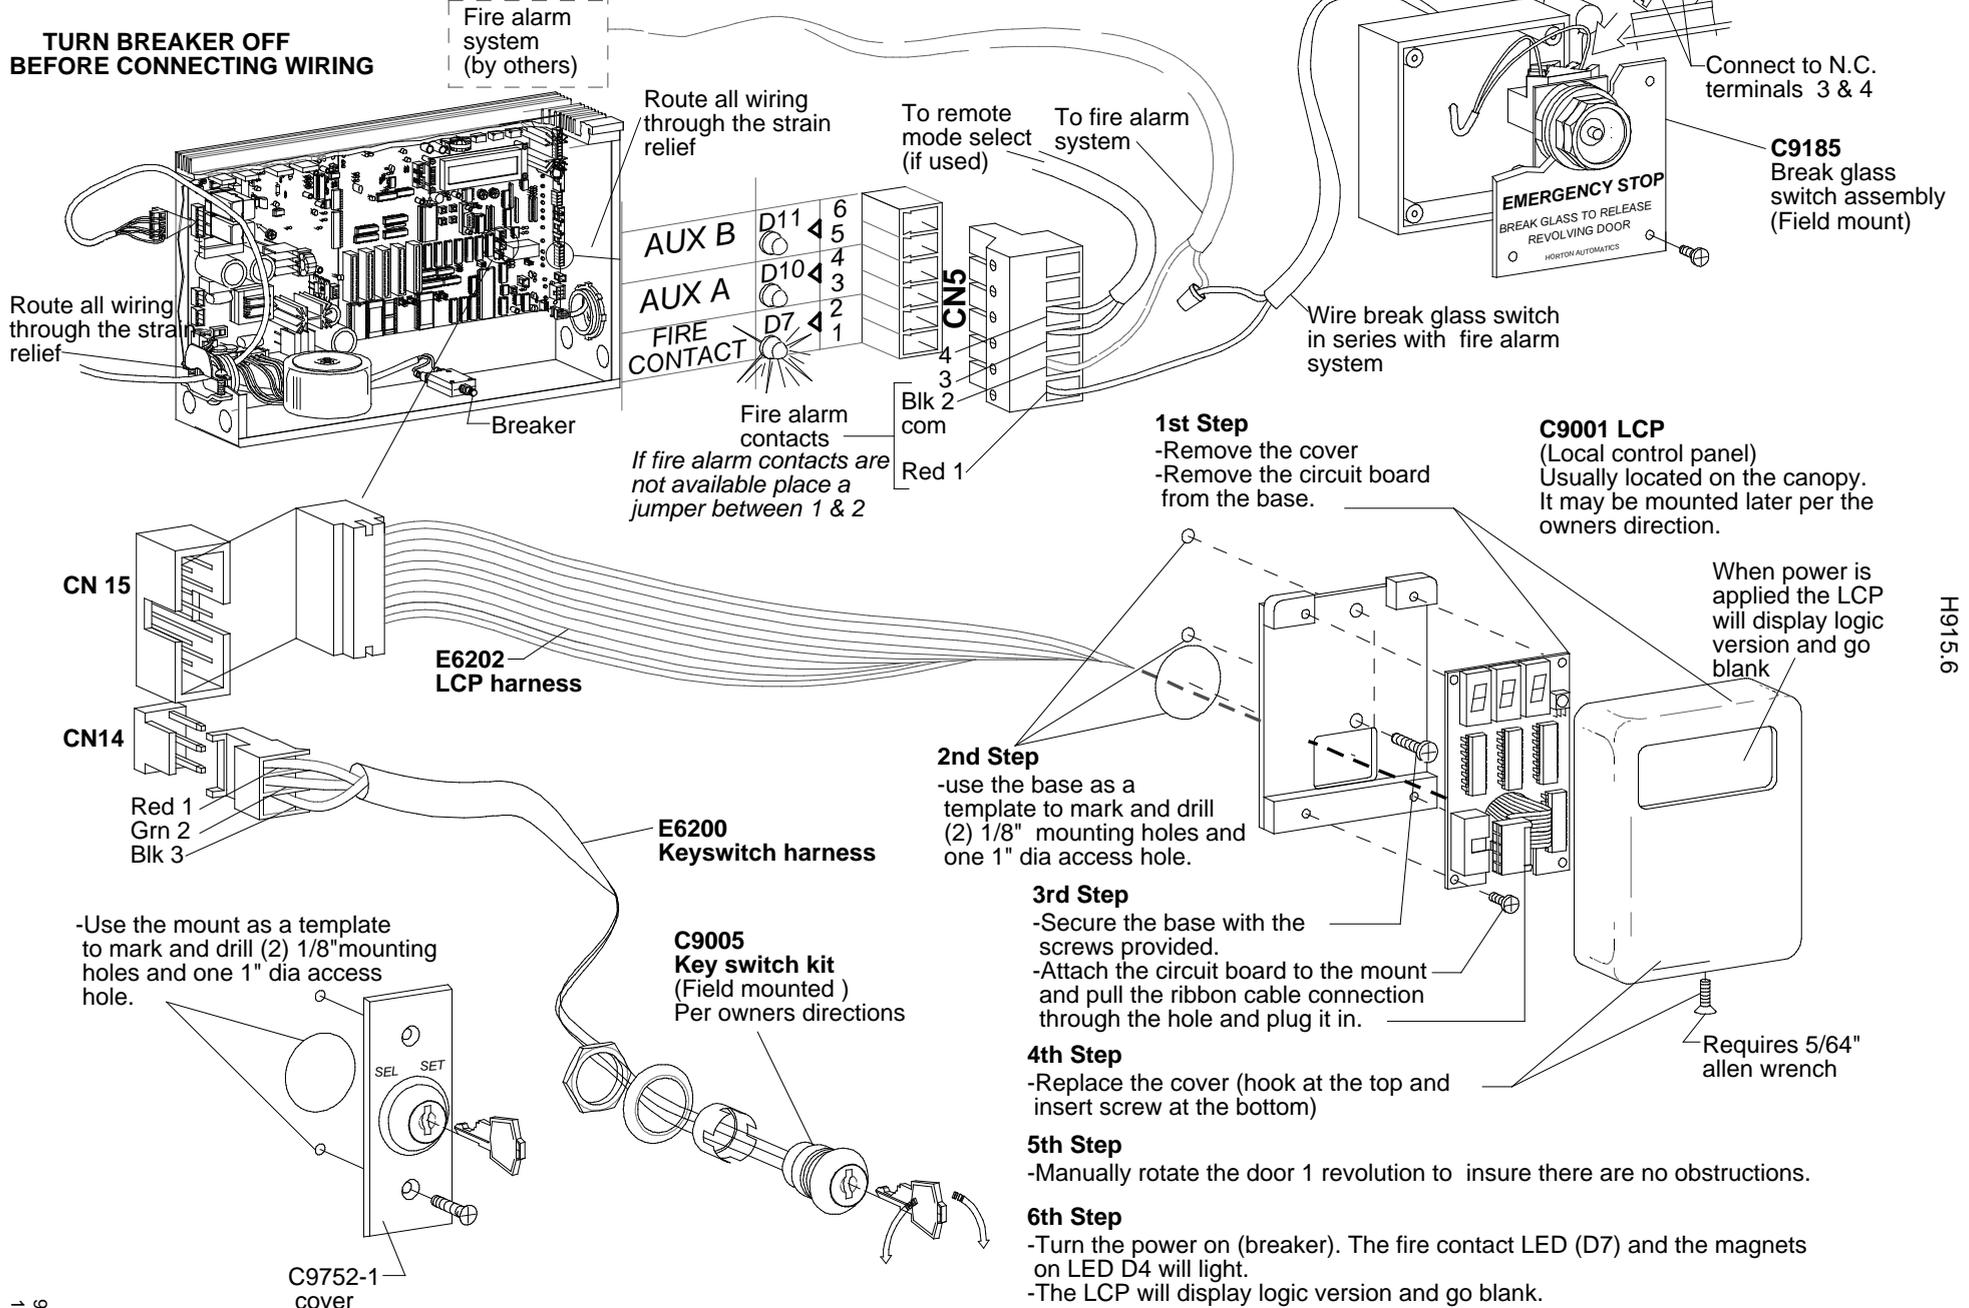

#### 3rd Step

Place the boot around the interface board and coupling secure with a hose clamp at the top and black tape at the bottom.  
(This step may be delayed until after step 6, section 4 test.)

H915.5

## 4. BASIC SETUP (wiring emergency stop switch, fire alarm, LCP and key switch)

**TURN BREAKER OFF BEFORE CONNECTING WIRING**

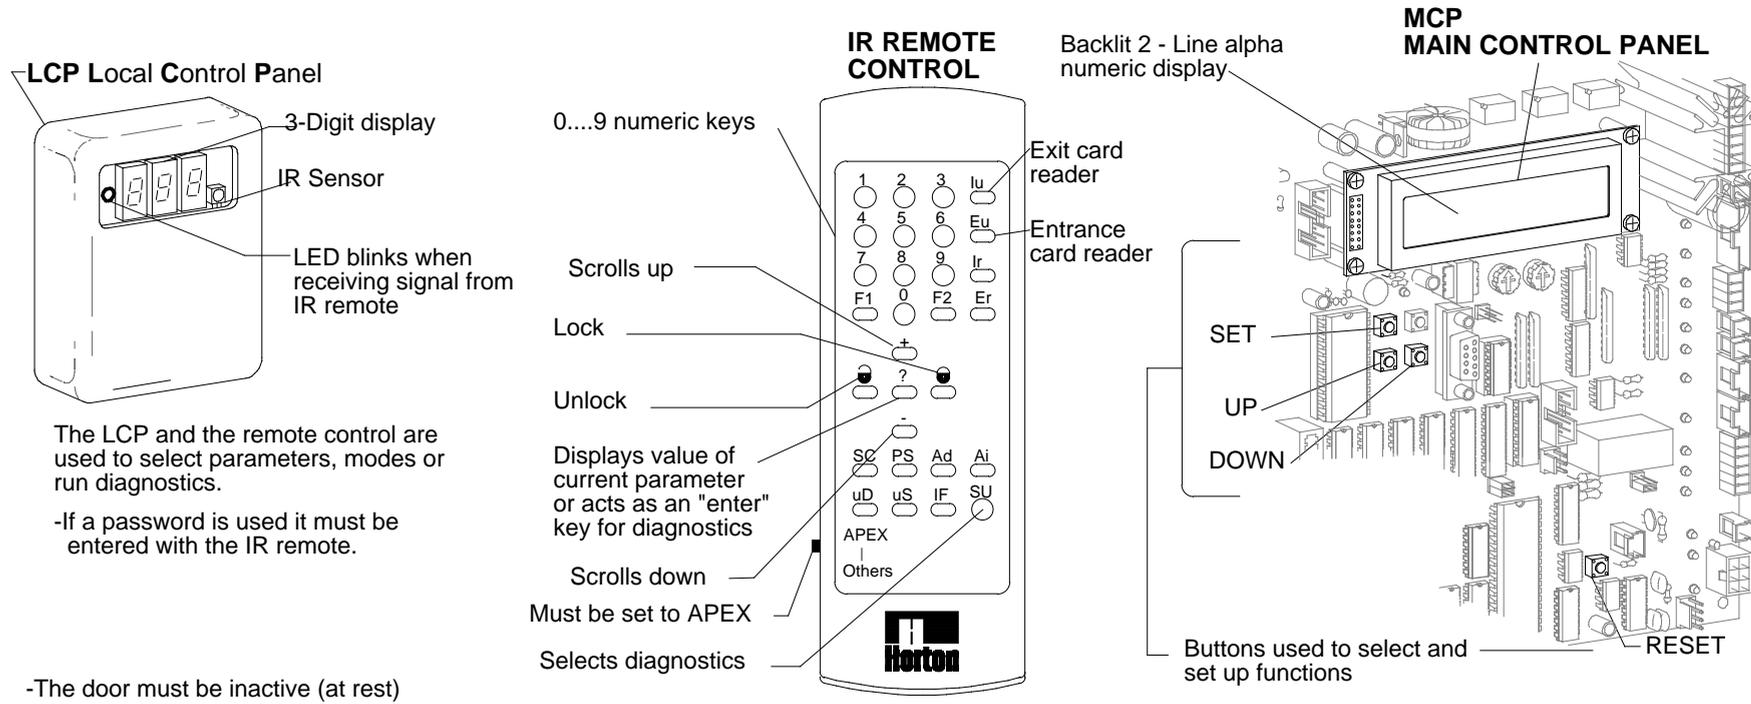

H915.6

## 5. BASIC SETUP (introduction to diagnostics)

Before proceeding 3 diagnostics should be performed. Spot check of motor and brake function to insure proper operation and then a setup run. The following is an outline of performing those diagnostics.

These diagnostics may be performed using the IR control and the LCP (Local Control Panel) or the MCP (Main Control Panel). The MCP will provide more information and can be used for reference even when using the remote / LCP.

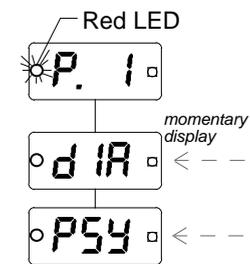

### Accessing the diagnostics from the infrared control.

- Point the IR remote at the LCP and press unlock
- The red LED on the LCP display will flash - indicating the signal is being received.
- If the control was previously locked with a password, the LCP will show **Unl** to indicate that it is waiting for the unlock code. Enter the correct password within 5 seconds.
- If the correct password was entered or none was required, the parameter menu will be displayed. The display will be some parameter number such as **P. 1**

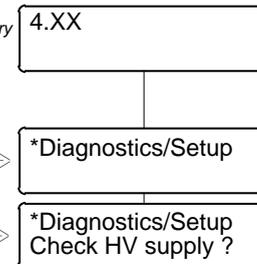

-Press **"SU"** diagnostics will appear

-Press **SU** again to exit

LCP display

MCP display

### Accessing the diagnostics from the control itself.

**-Press and hold the DOWN button while briefly pressing RESET.**

-The version number will display

-If the control is locked with a password it must be unlocked with the IR remote.

-Diagnostics/Setup will display

-Release the **DOWN** button

-Press **RESET** to exit

**GO TO NEXT PAGE TO CHECK MOTOR AND BRAKE CURRENT**

## 6. BASIC SETUP (checking motor and brake current)

**PLUG IN CN1**(motor and break connection) as shown in basic setup 1.  
If the door runs backwards see section 1.

**Accessing the diagnostics from the infrared control.**

**Accessing the diagnostics from the control itself.**

**CAUTION: DOOR WILL MOVE AT SPEED SET IN PARAMETER 1 (default 60 volts)**

The order in which the diagnostics are arranged

- 1 **PSY** (Power supply)
- 2 **SPd** (Door speed)
- 3 **drU** (Motor voltage & current)
- 4 **br i** (Brake voltage)
- 5 **br 2** (Brake voltage)
- 6 **EnC** (Encoder)
- 7 **InP** (Inputs)
- 8 **uo i** (Voice)
- 9 **CoU** (Check statistics)
- 10 **r i0** (Reserved)
- 14 **r i4** (Reserved)
- 15 **55L** (Safety limits)
- 16 **5Et** (Complete setup)

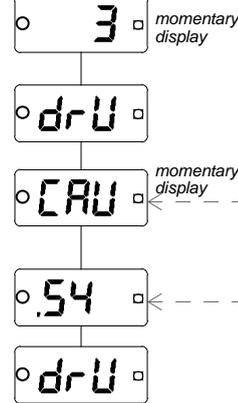

### CHECK MOTOR CURRENT

- Press 3 or "+" up "-" down until 3 is displayed
- Press "?"
- Displays motor amperage
- Useful for detecting mechanical binds
- checking overall performance of the doors mechanics.

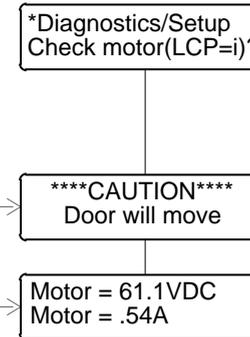

**MOTOR CURRENT SHOULD BE .50A TO 1.5A.**  
Higher than normal current suggests a mechanical bind or "rarely" an electrical problem

-Press **SU** again to exit

LCP display

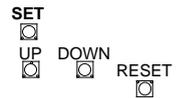

MCP display

-Press UP till 3 is displayed

-Press SET

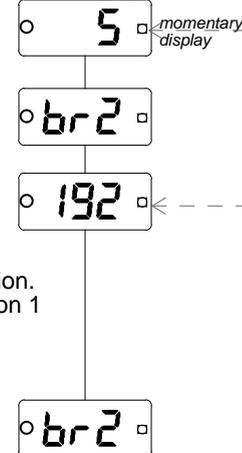

-Displays motor voltage and amperage

-Press RESET to exit

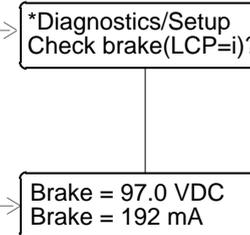

### CHECK BRAKE CURRENT (This test checks the brake (lock) mechanically and electrically)

- Press 5 or "+" up "-" down until 5 is displayed
- Press "?"
- Brake current is displayed.
- BRAKE CURRENT SHOULD BE 180ma TO 200ma.**  
Low brake current indicates an open connection. Check motor / brake connection at CN1 section 1 basic setup.
- Push the door to make sure the brake is physically locked.
- Press **SU** again to exit

LCP display

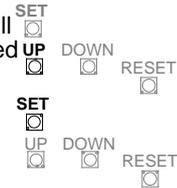

MCP display

-Press UP till 5 is displayed

-Press SET

-Break current and voltage are displayed

-Press RESET to exit

**GO TO NEXT PAGE**

## 7. BASIC SETUP (setup run)

Before installing any additional devices, a setup run should be performed. The setup run sets factory default settings to all parameters, zeros all counters and sets safety sensitivity settings.

### Accessing the diagnostics from the infrared control.

### Accessing the diagnostics from the main control panel.

#### COMPLETE SETUP

**CAUTION: The door will move on its own when this routine is initiated! use extreme caution to avoid entrapment.**

This diagnostics allows a complete control setup to be performed. This diagnostic can be the most **DESTRUCTIVE** if it is performed accidentally. This diagnostic should always be performed when initially installing a door and **never** be performed without good reason otherwise.

- Press 16 or "+" up "-" down  
Until 16 is displayed
- Press "?"

LCP display  
 momentary display

- Confirmation will be requested.
- To confirm press SET

- Press the "+" key again to perform the diagnostic.

- To **cancel** the setup, press the "-" key.

 momentary display

MCP display  
 \*Diagnostics/Setup  
 Do Complete Setup?

Setup:are you sure  
 Yes:Up/+ No:Down/-

\*\*\*\*CAUTION\*\*\*\*  
 Door will move-

Seeking + ref ..1 thu 4

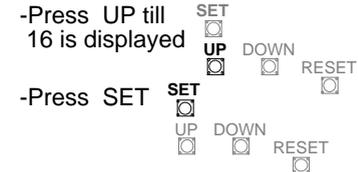

Pulses/wing=155

Seeking + ref ..1 thu 4

Peak I = 0.48

Seeking + ref ..1 thu 4

Peak I = 0.48

-Confirmation will be requested

- Press the **UP** button again to perform the diagnostic.

- To **cancel** the setup, press the **DOWN** button.

16

#### PULSES PER QUADRANT

- The door rotates through four quarterpoints and counts the total encoder pulses to determine how many pulses are present in each quadrant.
- Automatic 4-w 155 pulses per quadrant
- Automatic 3-w 210 pulses per quadrant
- Readings may vary depending on gear ratio

#### NORMAL SPEED CURRENT

- The door rotates through four quarterpoints at normal speed to determine the maximum current

#### REDUCED SPEED CURRENT

- The door rotates through four quarterpoints at reduced speed to determine the maximum current

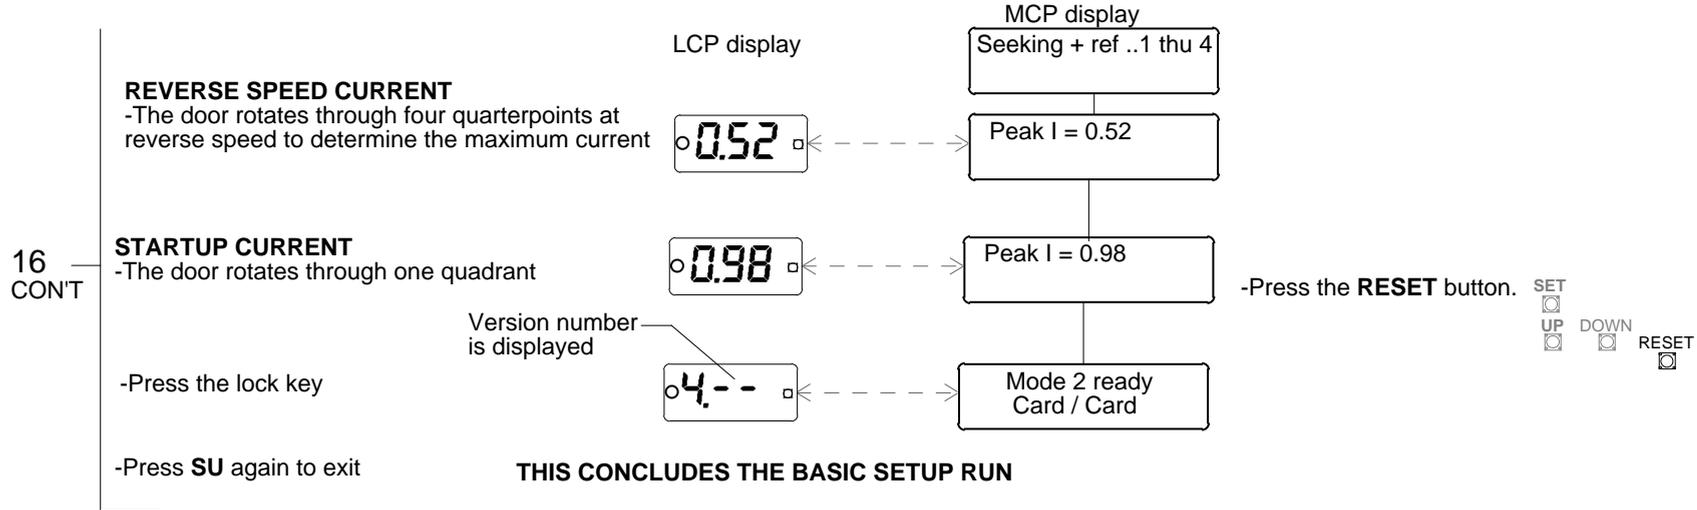

GO TO THE NEXT PAGE

## 8. BASIC SETUP (setup run)

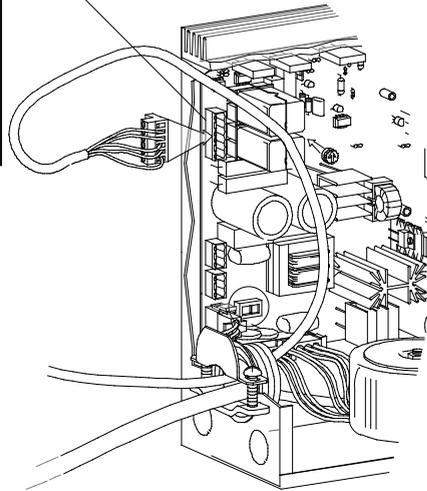

Accessing the diagnostics from the infrared control.

Accessing the diagnostics from the main control panel.

### COMPLETE SETUP (CON'T)

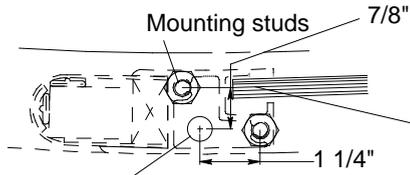

**NOTE:**  
Disconnect CN1 (motor & brake) so that the auxillary equipment can be connected and tested without the danger of the door rotating and causing injury or someone becoming entrapped by the brake (lock).

GO TO THE NEXT PAGE TO COMPLETE THE WIRING

## 9. BASIC SETUP (mat installation)

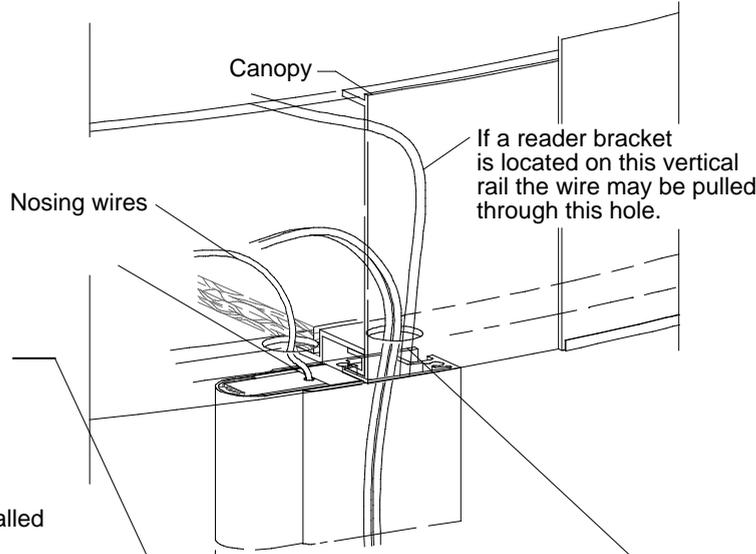

TURN BREAKER OFF BEFORE CONNECTING WIRING

**CAUTION**  
Do not drill into the glass pocket

### 1st Step

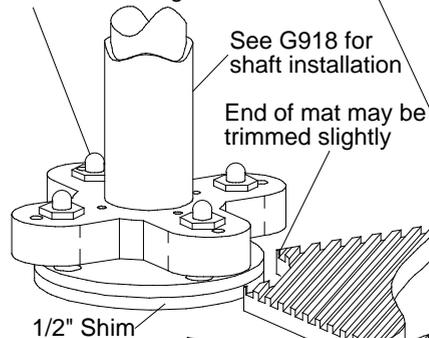

If the hole for the mat wire has not been pre-drilled - locate approx as shown. Drill a 3/4" hole.

### 2nd Step

Lay mat in the door and mark locations of wires. If not already done, cut a 3/8" high x 1" notch for wire access on all 4 entry posts.

**NOTE:**  
Mats should be installed before the wings.

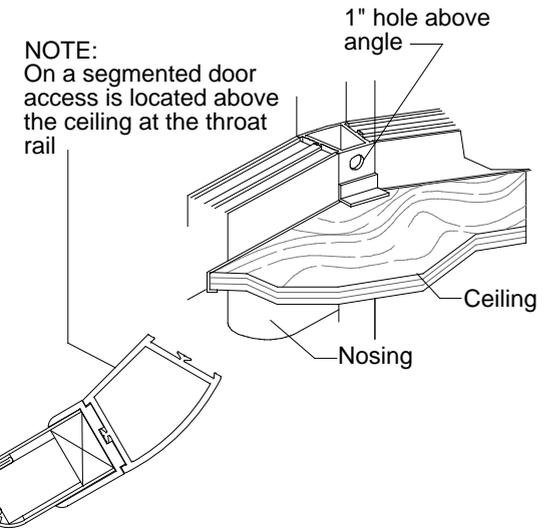

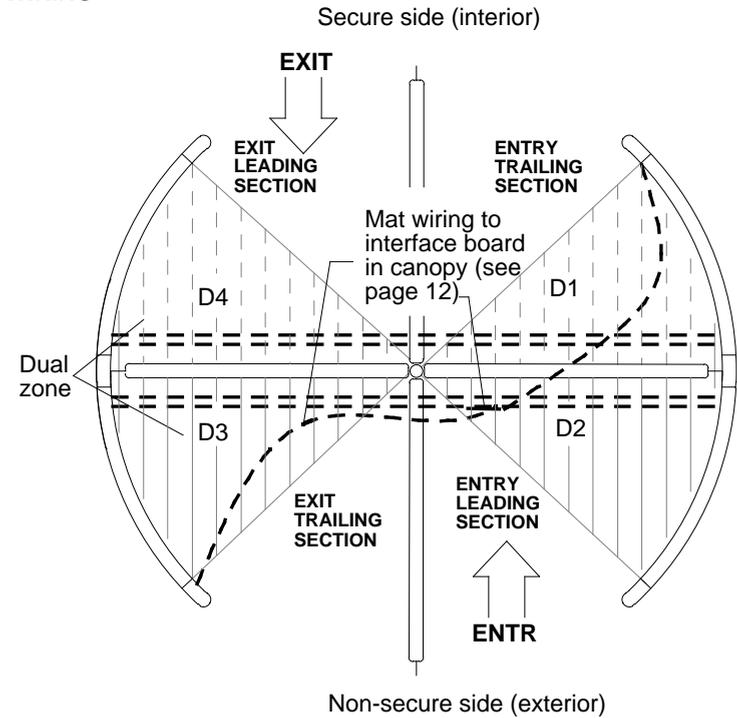

### 3rd Step

Drop a small "fish" chain down through the vertical throat rail and out through the slot at the bottom. Attach the chain to the mat wire. While feeding the wire in from the bottom pull the wire into the canopy (see plan)

### 4th Step

Position the active mat under the spider first then against the bottom drum rail. See floor plan for proper placement.

GO TO NEXT PAGE

**NOTE:**  
On a segmented door access is located above the ceiling at the throat rail

H915.11

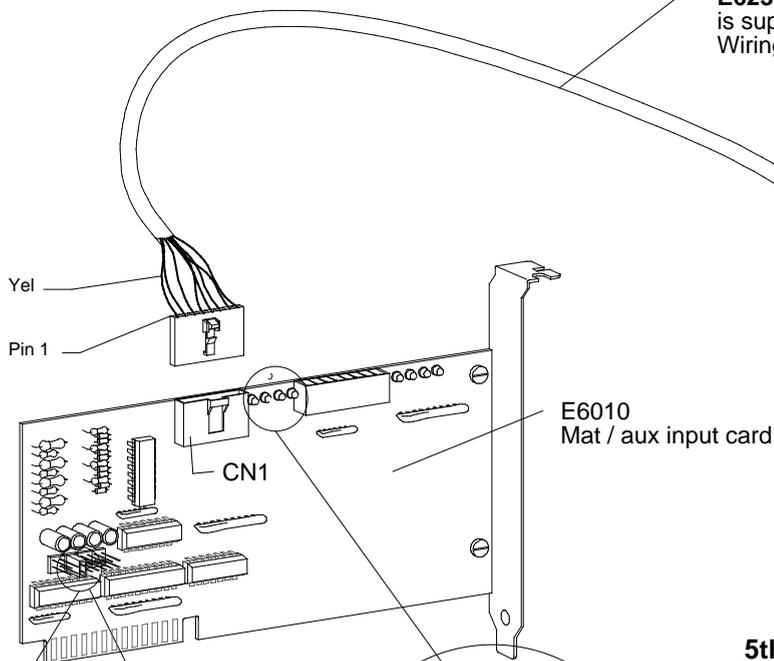

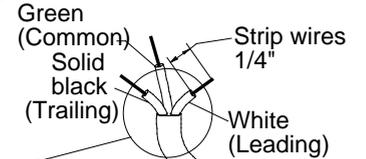

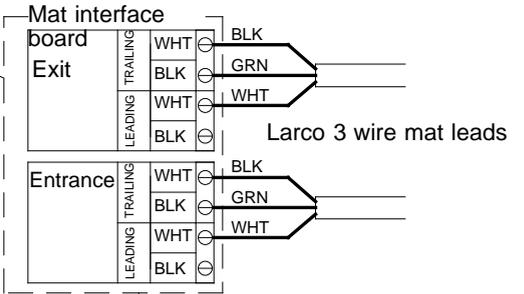

# 9.1 BASIC SETUP (mat installation for LARCO single 3-wire lead)

**TURN BREAKER OFF BEFORE CONNECTING WIRING**

For old mats follow color code on board

**E6238 Mat harness** is supplied with the control accessories. Wiring color code is shown for reference.

**E6026 Mat interface board** is supplied with the control accessories. Mount to gear drive support tube with #6 SMS

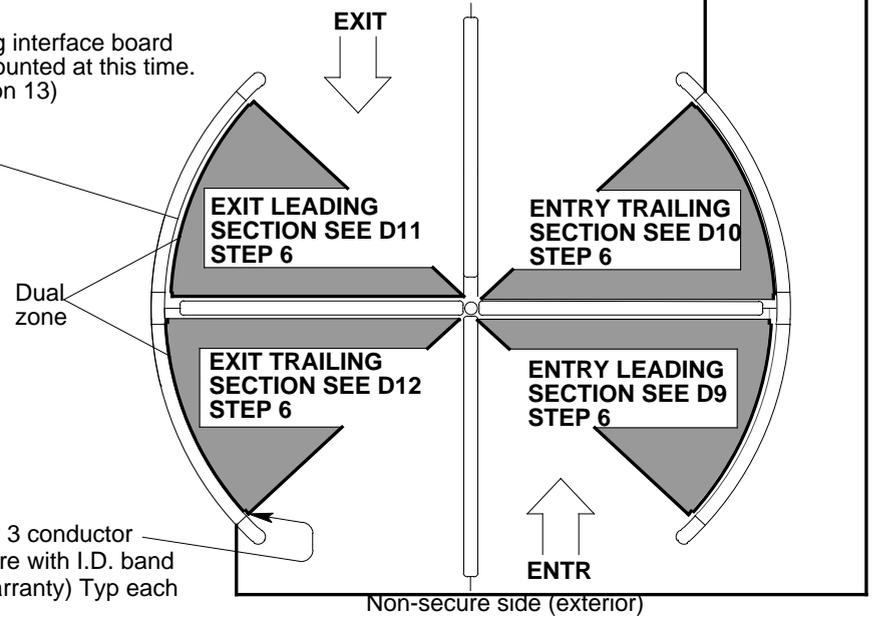

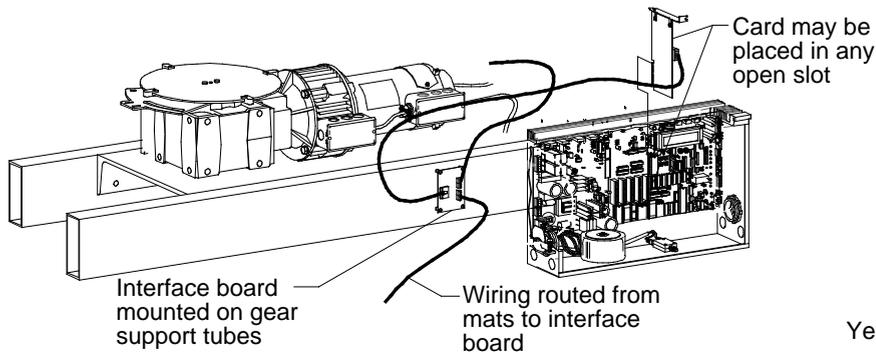

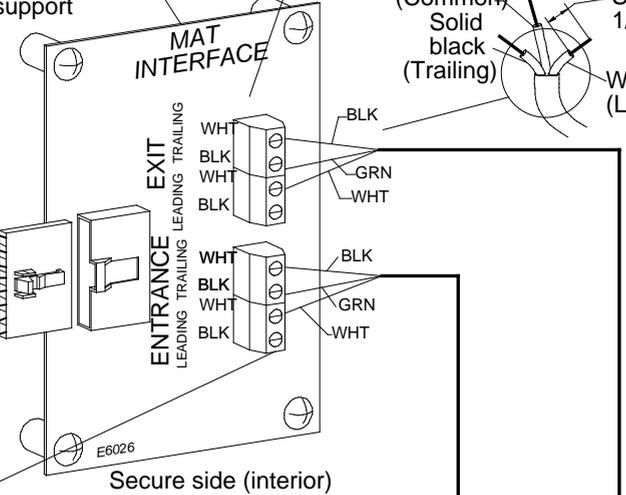

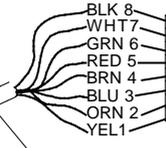

JUMPER should be in position shown on this card

**6th Step** Turn the control on and test mat by stepping on each section and observing the LEDs on the mat input card.

**5th Step** Connect wiring harness. Connect wiring from mats to mat interface.

**NOTE:** The nosing interface board may be mounted at this time. (see section 13)

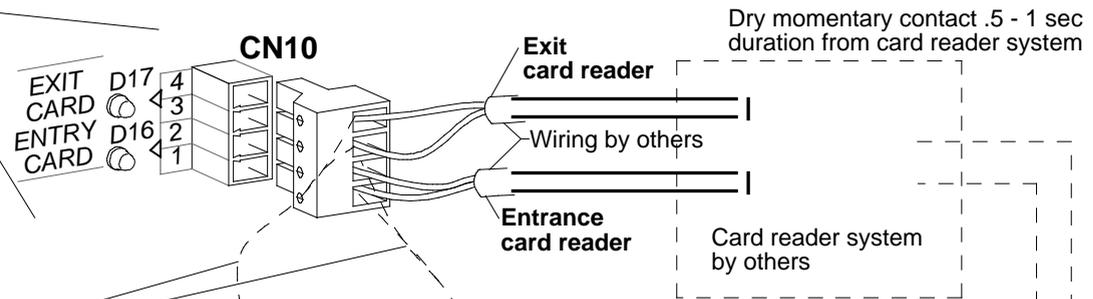

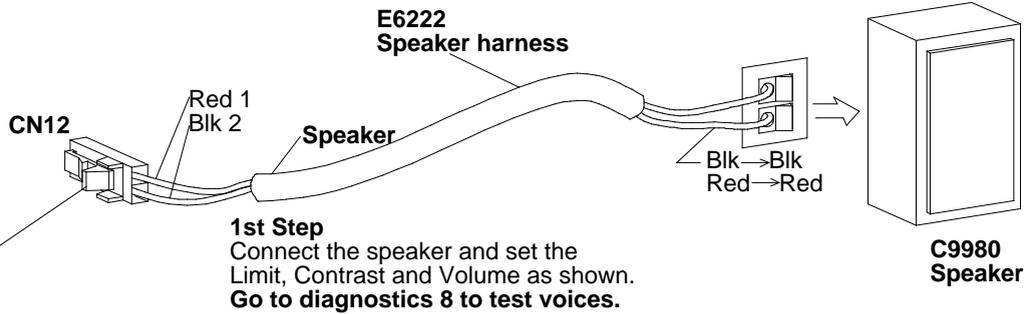

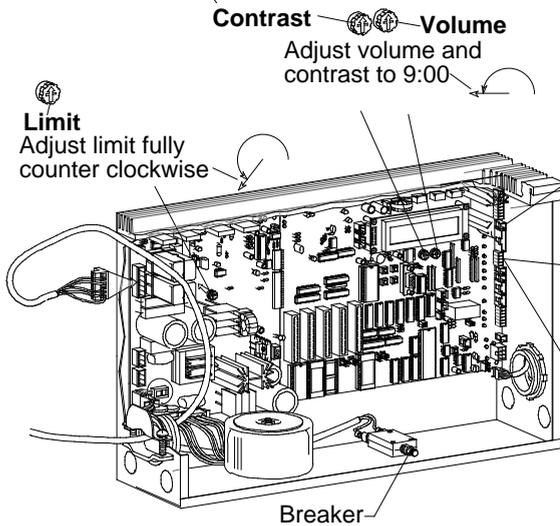

Yellow 3 conductor mat wire with I.D. band (for warranty) Typ each side.

H915.12

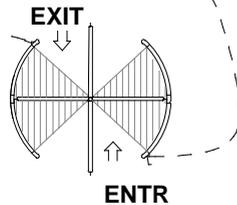

# 10. BASIC SETUP (wiring card readers and speakers)

**TURN BREAKER OFF BEFORE CONNECTING WIRING**

Improper adjustment of contrast can cause the display to look blank

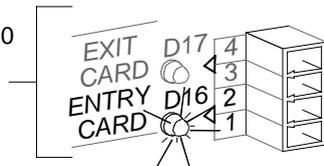

**2nd Step**  
**For test purposes:**  
 -Connect a 2 conductor (scrap) wire to 1 & 2 of CN10 and temporarily run to the ENTRY side of the door.  
 -Connect 3&4 of CN10 to the EXIT side of the door.

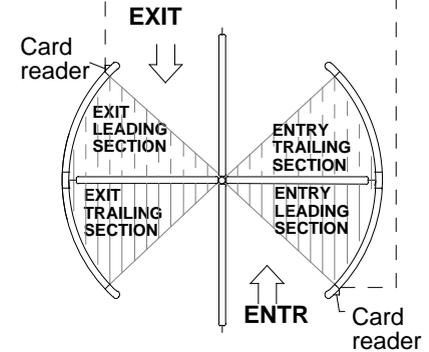

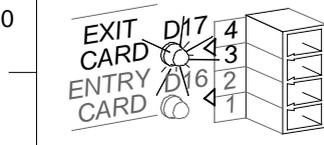

**3rd Step**  
**Turn power on and test as follows:**

-Close the connection between 1 & 2 on CN 10  
 D16 will light

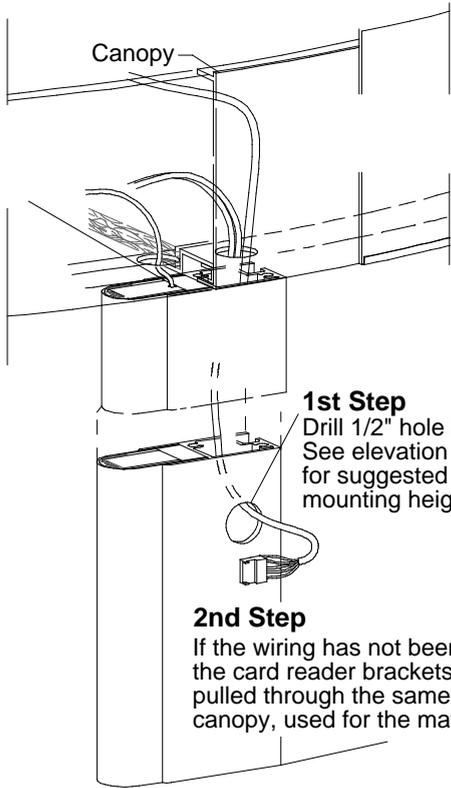

-Close the connection between 3 & 4 on CN 10  
 D17 will light

# 11. BASIC SETUP (routing wires & card reader status)

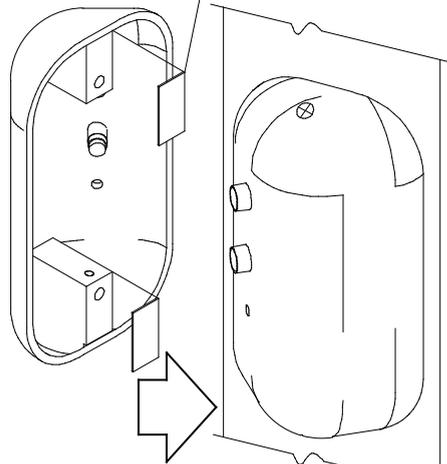

TURN BREAKER OFF BEFORE CONNECTING WIRING

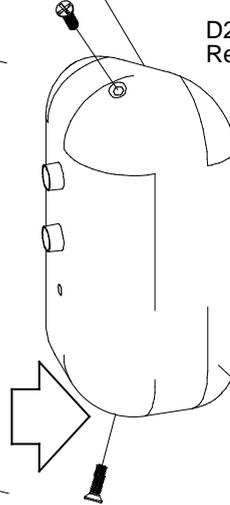

**1st Step**  
Drill 1/2" hole for plug.  
See elevation below  
for suggested  
mounting height.

**2nd Step**  
If the wiring has not been routed from  
the card reader brackets it may be  
pulled through the same hole, in the  
canopy, used for the mat wires.

**3rd Step**  
Place double face  
tape on the top and  
bottom mounts.  
Press the bracket  
to the nose rail

**4th Step**  
Remove the bracket  
Drill holes in the rail as  
shown

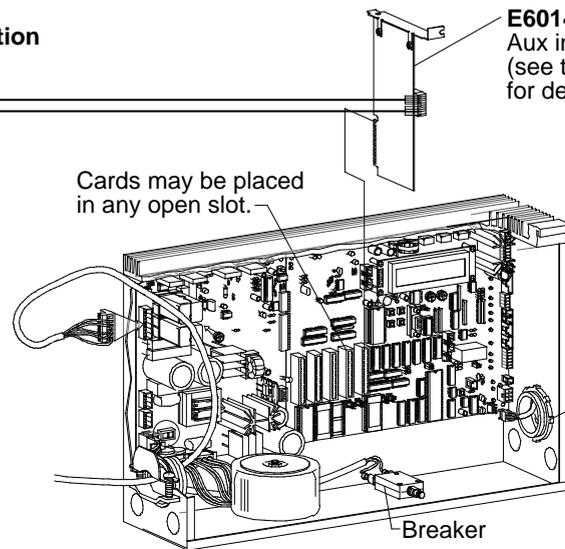

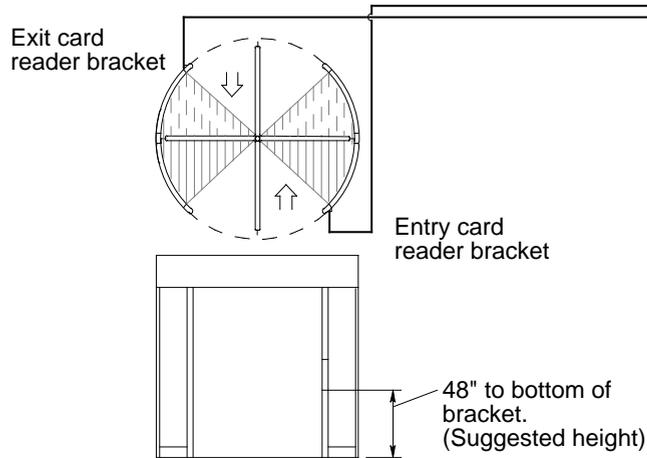

D2 Red  
D1 Grn

**E6205**  
Brn 1  
Red 2  
Grn 3  
Wht 4  
Blk 5

C9997-5  
(For round doors)  
C9997-4  
(For segmented doors)

Drill for  
mounting  
holes for #10  
SMS

**NOTE:**  
Ask the customer about location  
of bracket before mounting.

**6th Step**  
Bring the wiring through  
the canopy and the strain relief to  
the Aux indicators card.

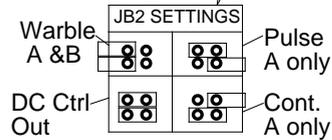

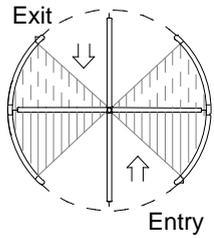

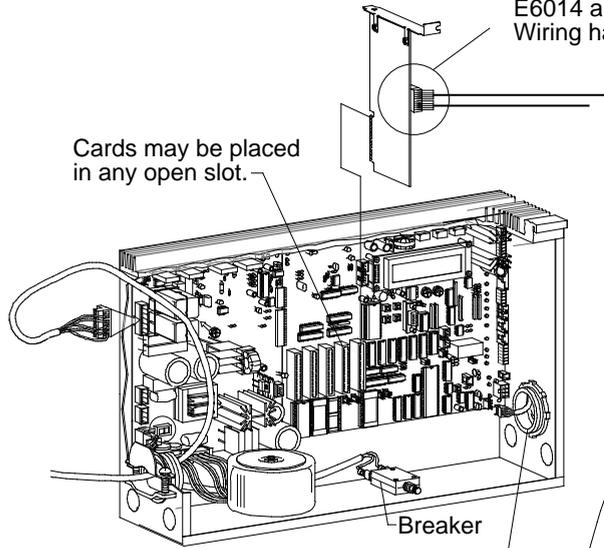

**GO TO NEXT PAGE**

Route all wiring  
through the strain  
relief

# 11.1 BASIC SETUP (wiring reader brackets)

**TURN BREAKER OFF  
BEFORE CONNECTING WIRING**

**7th Step**  
Make wiring connections to the E6014 aux card as shown. Wiring harnesses are supplied.

Pulse A only sound (beep-beep-beep...)

Pulse A cont sound (beeeeeeeee...p)

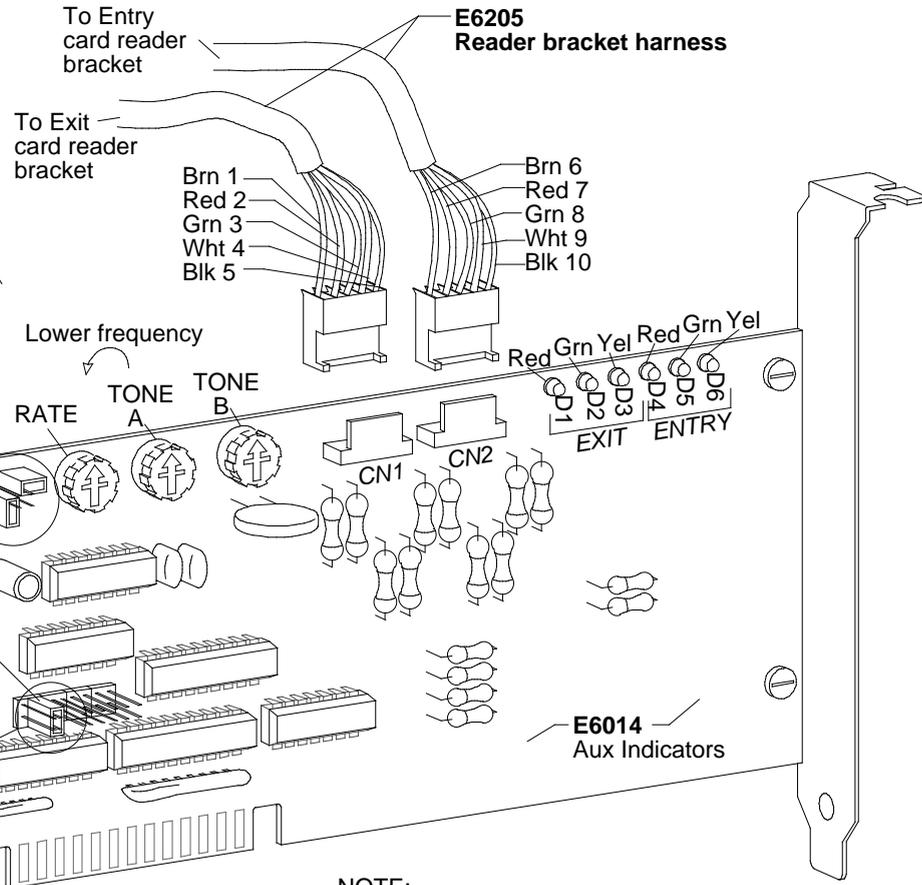

Warble A & B sound alternates between tone A & B (deee-doo-deee-doo-deee-doo...)

DC Ctrl Out (no sound at all)

The rate potentiometer changes the frequency of the warble:

=de-do-de-do-de-do...

=deee-dooo-deee-dooo-deee-dooo....

Jumper is factory set and should be in position shown on this card **DO NOT MOVE**

**NOTE:**  
E6014 can be used for status indicator lights even if card reader brackets are not installed.

## 12. BASIC SETUP (wiring motion detectors and lights)

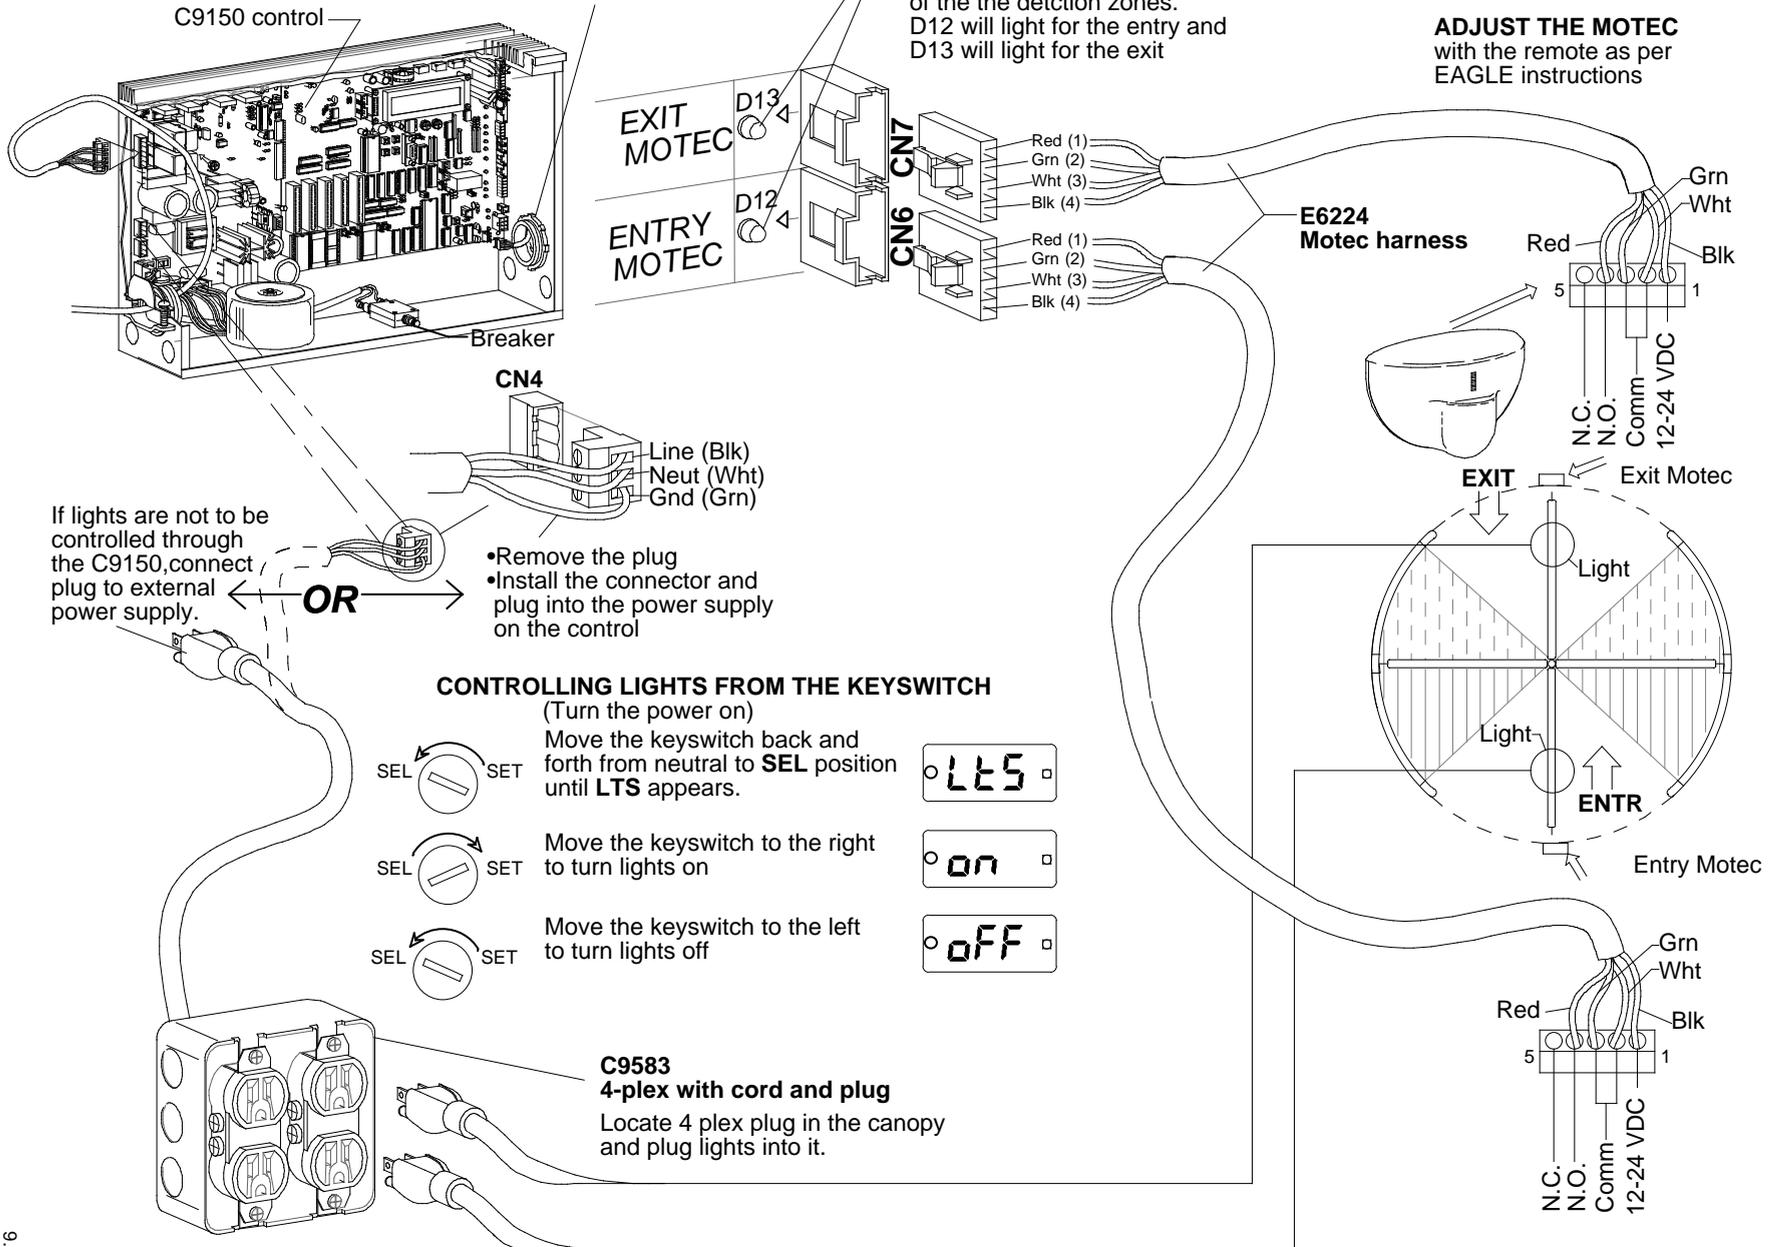

**TURN BREAKER OFF  
BEFORE CONNECTING WIRING**

Route all wiring through  
the strain relief

### TEST THE MOTECs

Turn on the power.  
Have someone pass through each  
of the the detection zones.  
D12 will light for the entry and  
D13 will light for the exit

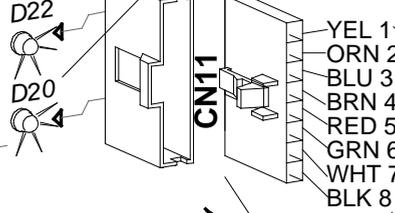

**ADJUST THE MOTEC**  
with the remote as per  
EAGLE instructions

# 13. BASIC SETUP (nosing wiring)

**TURN BREAKER OFF BEFORE CONNECTING WIRING**

TRAILING NOSINGS  
LEADING NOSINGS

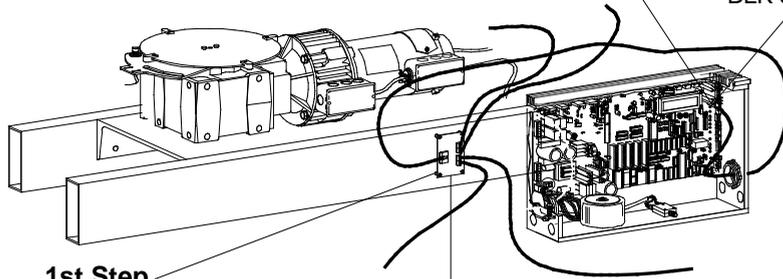

## 5th Step TEST THE NOSINGS

- Turn the power on.
- Push each leading nosing LED D20 will come on.
- Push each trailing nosing LED D22 will come on

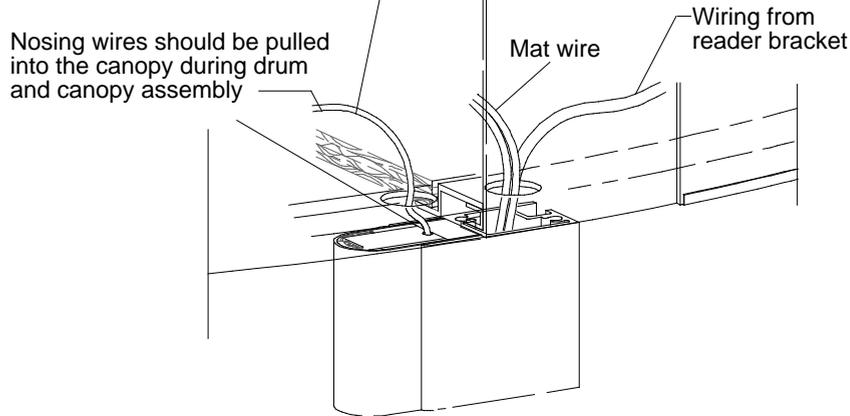

**E6238 Nosing harness** is supplied with the control accessories. Wiring color code is shown for reference only.

**E6024 Nosing** interface board is supplied with the control accessories.

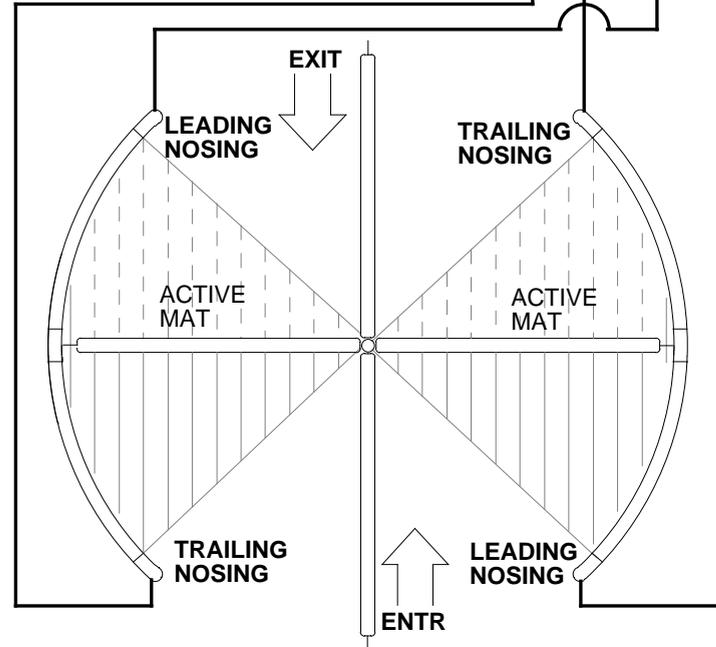

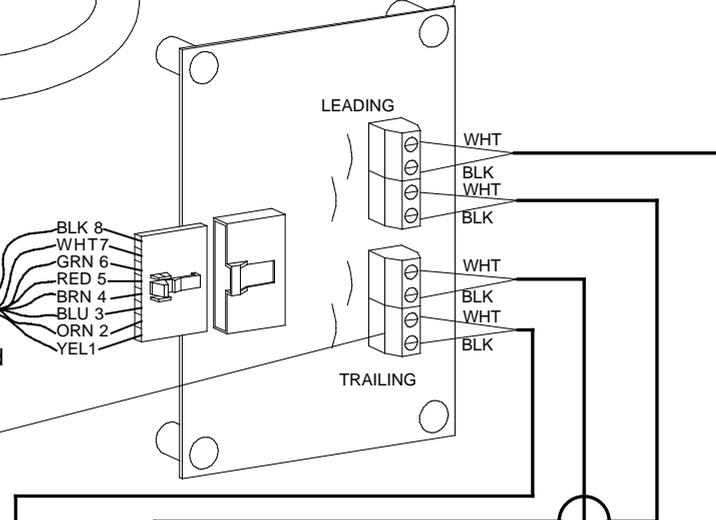

**1st Step**  
Interface board is supplied with the control accessories. Mount to the gear drive support tubes with #6 SMS (drill 3/32" pilot hole)

**2nd Step**  
Route safety edge wiring to control nosing interface board mounted on geartrain support tubes

**4th Step**  
Connect harness from CN11 to interface board

**3rd Step**  
Make connections at nosing interface board.

H915.17

## 14. BASIC SETUP (testing)

The following tests are designed to check all inputs and outputs without regard to mode. The tests are conducted in mode 2 (card/card +) and mode 11 (motec/motec), if motecs are used. ATTENTION "X" logic users, all tests are conducted in the "+" position - return to the "X" position after the test is complete.

Plug in CN1 (motor and brake) and turn the breaker on.

### WALK TEST (mode 2)

(If MCP does not read mode 2 ready... see SEC.21)

Card in may be simulated by closing the contacts between 3 & 4 on CN10

D17 lights on CN10

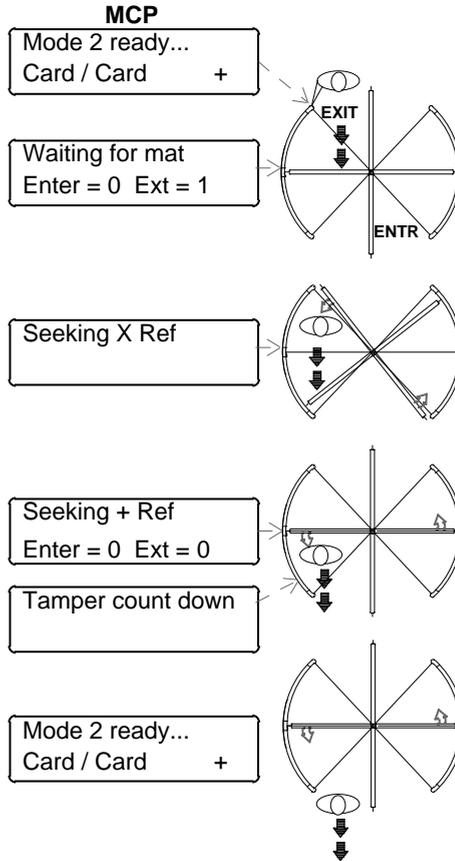

System is waiting for contact with the mat

Step on the mat-D11 Exit mat lights up and motor starts to run

Walk through - the door will seek X and then +reference

If the mat is not cleared in the time required a count down begins to a security violation

Exit from the revolver and the system returns to inactive status

### UN-AUTHORIZED ENTRY (mode 2)

(If MCP does not read mode 2 ready... see SEC.21)

Card in may be simulated by closing the contacts between 3 & 4 on CN10

D17 lights on CN10

System is waiting for contact with the mat

Step on the mat-D11 Exit mat lights up and motor starts to run

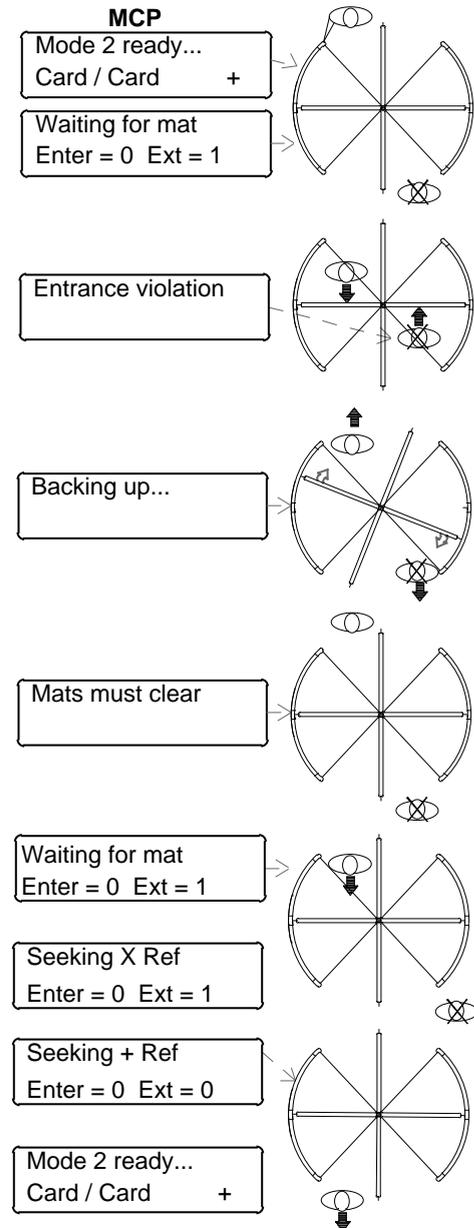

If an un-authorized enter is attempted from the other side the door will stop and announce a security violation

The door will then start to backup after the announcement is complete

The mats must be cleared on both sides

The door may be re-entered form the authorized side

The authorized entry may proceed through the door

GO TO NEXT PAGE TO CONTINUE MODE 2 TESTING

## 14.1. BASIC SETUP (testing)

The following tests are designed to check all inputs and outputs. The tests are conducted in mode 2 (card/card +) and mode 11 (motec/motec), if motecs are used.

**Plug in CN1** (motor and brake) and turn the **breaker on**.

### SAFETY STOP (mode 2)

(If MCP does not read mode 2 ready... see SEC.21)

Card in may be simulated by closing the contacts between 3 & 4 on CN10  
D17 lights on CN10

System is waiting for contact with the mat

Step on the mat-D11 Exit mat lights up and motor starts to run

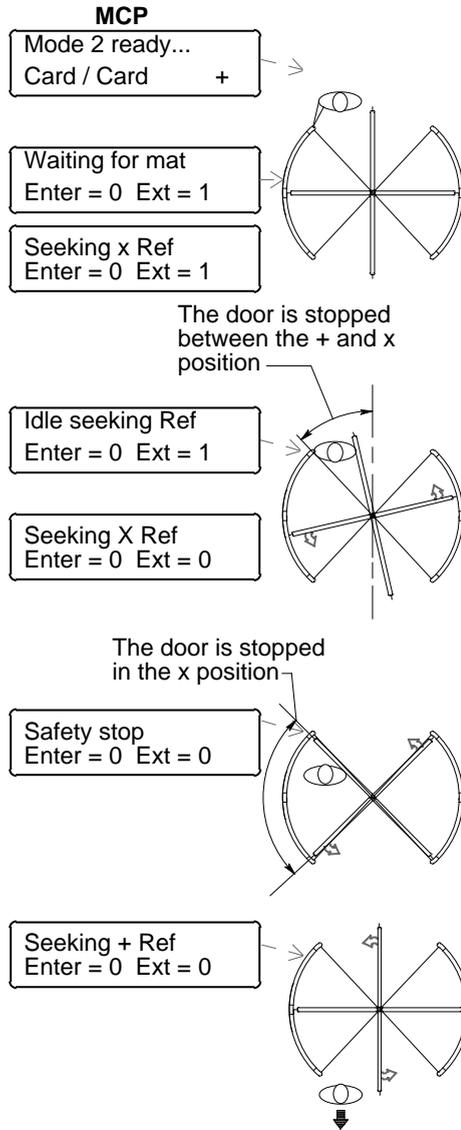

If door is stopped or contact is made with the safety nosing between the + and X position the door will go into the idle mode, with the brake off, and may be pushed back or forward to the + position

Contact is cleared

Door makes contact with pedestrian

Contact is cleared

Exit the door

### IDLE TEST (mode 2)

(If MCP does not read mode 2 ready... see SEC.21)

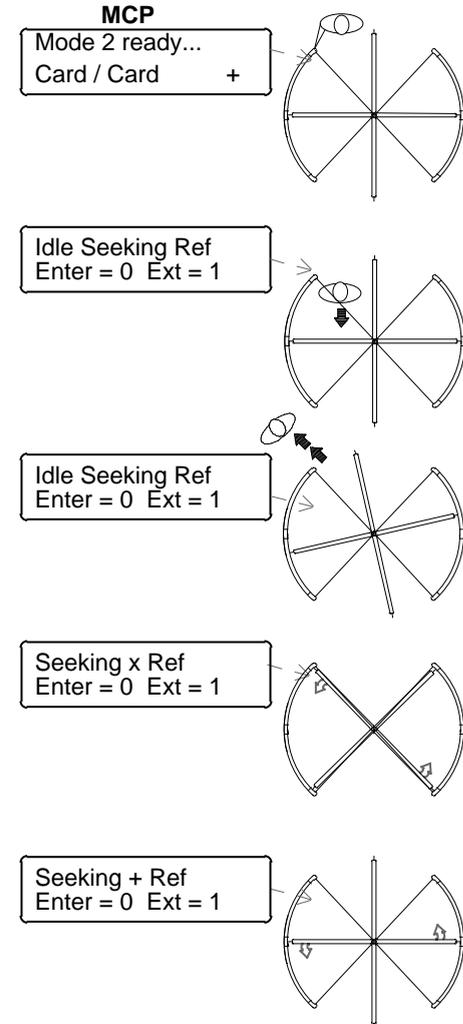

Card in may be simulated by closing the contacts between 3 & 4 on CN10

Mat is activated  
Contact with safety nosing

Then...

Abandon

After a 5 sec. delay  
The door will rotate through the X then the + position.

**THIS CONCLUDES MODE 2 TESTING  
GO TO NEXT PAGE FOR MODE 11 TESTING**

## 14.2. BASIC SETUP (testing)

The following tests are designed to check all inputs and outputs. The tests are conducted in mode 2 (card/card +) and mode 11 (motec/motec), if motecs are used.

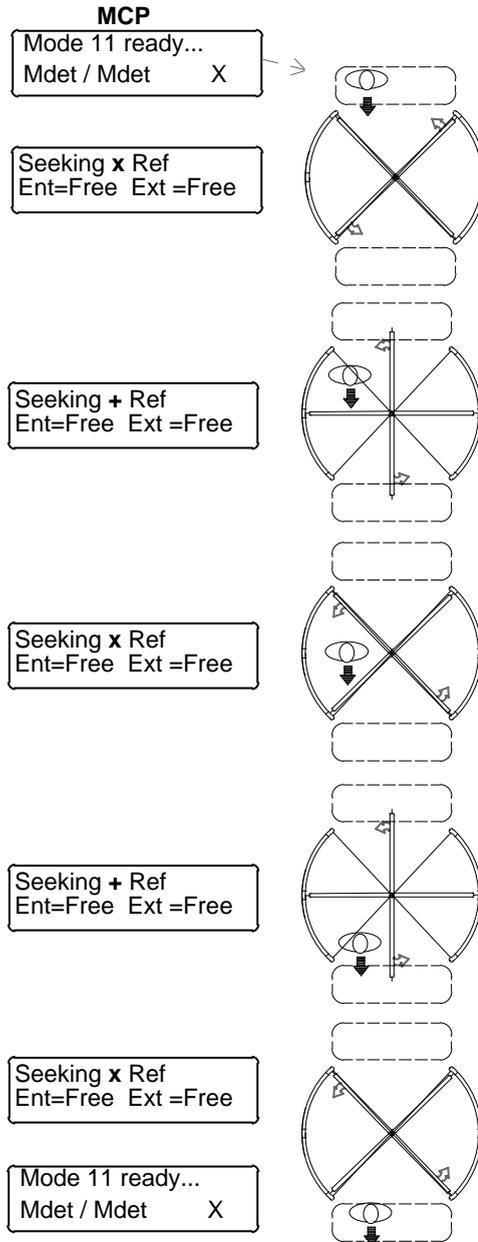

**Plug in CN1** (motor and brake) and turn the **breaker on**.

### MOTION DETECTOR ACTIVATION (mode 11)

(If MCP does not read mode 11 ready... see SEC.21)

Move into the detection zone - the door will start to rotate

The light on the reader bracket will be green

This cycle will continue as long as the motec zone is activated.

After activation zone clears, the will door rotate for 5 sec. (default) see parameter 23

After the zones are clear the unit returns to inactive status

Repeat this test for each side

# 15. DIAGNOSTICS CHART 1

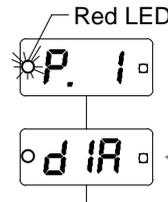

## SEE SECTION 5 FOR INTRODUCTION TO CONTROL SETUP

### Accessing the diagnostics from the infrared control.

- The door must be inactive (in standby condition)
- Point the IR remote at the LCP and press unlock
- The red LED on the LCP display will flash - indicating the signal is being received.
- If the control was previously locked with a password, the LCP will show **UnL** to indicate that it is waiting for the unlock code. Enter the correct password within 5 seconds.

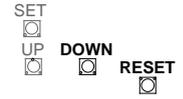

-If the correct password was entered or none was required, the parameter menu will be displayed. The display will be some parameter number such as **P. 1**

-Press **"SU"** diagnostics will appear

### Accessing the diagnostics from the control itself.

- The door must be inactive (in standby condition)
- Press and hold the **DOWN** button while briefly pressing **RESET**.

-The version number will display

-If the control is locked with a password it must be unlocked with the IR remote.

- Diagnostics/Setup will display
- Release the **DOWN** button

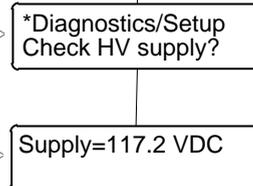

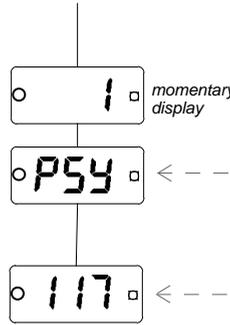

The order in which the diagnostics are arranged

- 1 **P5Y** (Power supply)
- 2 **SPd** (Door speed)
- 3 **drU** (Motor voltage & current)
- 4 **br 1** (Brake voltage)
- 5 **br 2** (Brake voltage)
- 6 **EnL** (Encoder)
- 7 **inP** (Inputs)
- 8 **uo 1** (Voice)
- 9 **CoU** (Check statistics)
- 10 **r 10** (Reserved)
- 11 **r 11** (Reserved)
- 12 **r 12** (Reserved)
- 13 **r 13** (Reserved)
- 14 **r 14** (Reserved)
- 15 **55L** (Safety limits)
- 16 **5Et** (Complete setup)

To return to the main diagnostics menu, press the **"SU"** button on the remote . Press the **LOCK** button, on the remote, or hold the **DOWN** button and briefly push the **RESET** on the control to exit all diagnostics and restore normal door operation.

#### CHECK POWER SUPPLY

- After a few seconds diagnostic 1 will display *or...*
- Press 1 or "+" up "-" down
- Press "?"
- Displays DC voltage output of the power supply to operate the motor and the core brake. Voltage will fluctuate with changes in the incoming voltage. A typical value is 111 to 114 VDC

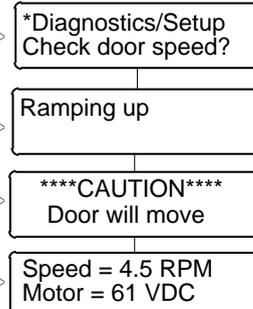

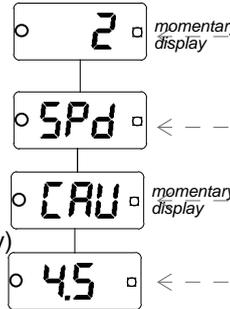

-After a few seconds diagnostic 1 will display

- Press SET .

#### CHECK DOOR SPEED

- Press 2 or "+" up "-" down
- Press "?"
- Ramps the motor up to normal speed and displays it in RPM.
- Using the + and - keys on the IR remote the motor voltage may be changed in small steps (temporarily) to determine the motor voltage required for a desired speed. The actual voltage is change in parameters 1 and 2.

- Press UP till 2 is reached

- Press SET

the LCD displays the RPM and the motor voltage.

To choose this speed for Normal --- Press 1  
Reduced - Press 2  
Reverse -- Press 3

If the door speed is changed re-do diagnostic 15 (Reset safety sensitivity levels)

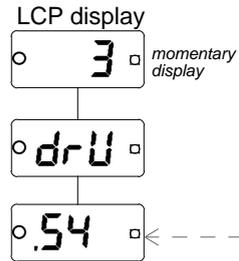

## 16. DIAGNOSTICS CHART 2

### Accessing the diagnostics from the infrared control.

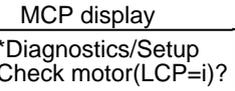

#### CHECK MOTOR VOLTAGE AND CURRENT

3

- Press 3 or "+" up "-" down
- Press "?"
- Displays motor amperage
- Useful for hunting mechanical binds
- checking overall performance of the doors mechanics.
- Press **SU** again to exit

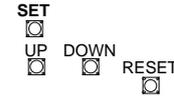

### Accessing the diagnostics from the control itself.

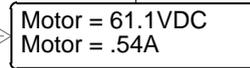

- Press UP till 3 is reached

- Press SET

- Displays motor voltage and amperage

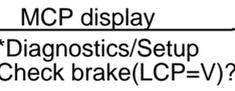

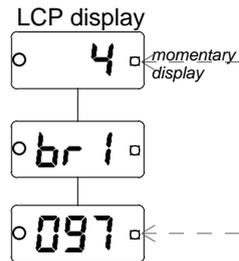

- Press RESET to exit

#### CHECK BRAKE VOLTAGE AND CURRENT (LCP displays voltage)

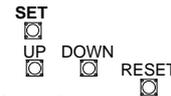

4

- Press 4 or "+" up "-" down
- Press "?"
- Engages the core brake and displays the voltage.
- Voltage will fluctuate with line voltage changes.
- A value of 90 to 105VDC is typical.
- Verify that the brake engages mechanically and properly locks the door.
- Checks the break control subsections of the control.
- Press **SU** again to exit

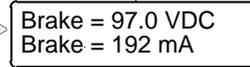

- Press UP till 4 is reached

- Press SET

- Displays brake voltage and amperage

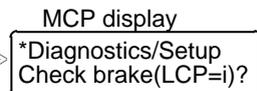

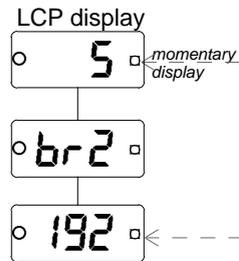

- Press RESET to exit

#### CHECK BRAKE VOLTAGE AND CURRENT (LCP displays current)

5

- Press 5 or "+" up "-" down
- Press "?"
- Brake current is displayed. Current is typically in the 200ma range
- Press **SU** again to exit

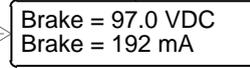

- Press UP till 5 is reached

- Press SET

- Break current and voltage are displayed
- Press RESET to exit

# 17. DIAGNOSTICS CHART 3

## Accessing the diagnostics from the infrared control.

## Accessing the diagnostics from the control itself.

### ENCODER TEST

- Press 6 or "+" up "-" down
- Press "?"

- Encoder count is displayed up to 999. If the count exceeds 999 the LCP displays ---
- The encoder count should increase smoothly as the door is **pushed**.

### MANUAL ENCODER TEST

- Negative readings will not display - Both displays will be frozen at zero if the door is pushed backwards from a reference indicator.
- To manually test the reverse operation of the encoder, push the door forward allowing it to build up the count, then reverse the door to test the reverse operation of the encoder.

### POWER ENCODER TEST (Remote only)

- The encoder may also be checked by pressing the 1 key on the IR remote. The door will run forward at a slow speed -the speed may be changed up or down by using the + and - buttons on the IR remote. Pressing the 2 button will run the door in reverse.
- Press zero on the IR remote to return to manual encoder testing.
- Press **SU** again to exit

NOTE: codes 33 thru 40 may appear if an E6004 card is NOT installed in the system. In this case the codes are meaningless.

# 18. DIAGNOSTICS CHART 4

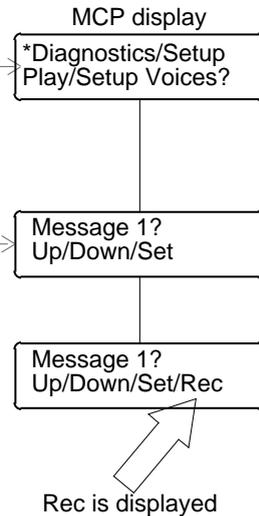

## Accessing the diagnostics from the infrared control.

### VOICE

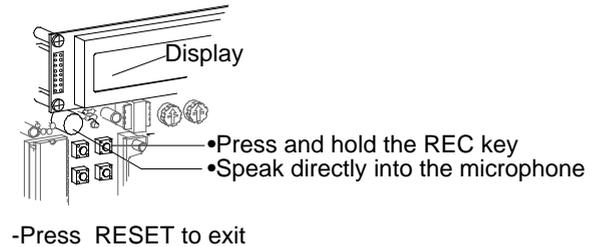

- Press 8 or "+" up "-" down
- Press "?"
- Displays V.1, V.2, V.3 & V.4  
Use the "+" and "-" keys to select any of the voices stored in the control's speech memory. Use the "?" key to play the selection.
- Voices may be played from the IR control but not recorded
- To record a new message:
- Select the message to be replaced
- Hold the SET button until REC appears. Hold the REC button and speak directly into the microphone. The total length of each message cannot exceed 5 seconds.
- CAUTION:** Pressing the REC button will completely erase the previous message.
- The REC button is disabled at all times except when this setup routine is run.
- The factory default messages are:
- Voice 1 "Security violation"      -Voice 3 "Please exit door, then re-enter"
- Voice 2 "Door will reverse"      -Voice 4 (Not recorded)
- Press **SU** again to exit

## Accessing the diagnostics from the control itself.

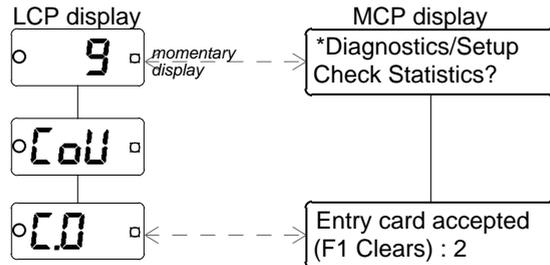

- Press UP till 6 is reached
- Press SET
- The voice message will be displayed in text form. Use the UP and DOWN keys to select a voice message.
- Use the SET key to play that message.

### CHECK STATISTICS

- Press 9 or "+" up "-" down
- Press "?"
- The code for the first statistic is displayed.

- Press UP till 9 is reached
- Press SET
- Each statistic is displayed along with its corresponding value.

During normal operation a number of significant statistics are stored in the counter's internal memory. These counters hold the following information:

LCP	LCD	LCP	LCD
C.0	Entrance - number of cards accepted	C.16	Exit - reserve counter
C.1	Entrance - number of successful entrances	C.17	Exit - reserve counter
C.2	Entrance - number of attempted violations	C.18	Control reboots
C.3	Entrance - number of cancellations	C.19	Door lockdowns
C.4	Entrance - reserved counter	C.20	Safety stops
C.5	Entrance - reserved counter	C.21	Security pass requests
C.6	Entrance - reserved counter	C.22	Idle requests
C.7	Entrance - reserved counter	C.23	Tamper alarms
C.8	Entrance - reserved counter	C.24	Inactive timeouts
C.9	Exit - number of cards accepted	C.25	Reserve counter
C.10	Exit - number of successful exits	C.26	Reserve counter
C.11	Exit - number of attempted violations	C.27	Reserve counter
C.12	Exit - number of cancellations	C.28	Reserve counter
C.13	Exit - reserve counter	C.29	Reserve counter
C.14	Exit - reserve counter		
C.15	Exit - reserve counter		

- To view a statistic: Use the "+" and "-" buttons on the remote. The Up and DOWN buttons on the control itself. The number keys 0 thru 9 on the IR remote.
- When the desired statistic is found, press the "?" on the remote or the SET button on the control to view the count on the LCP. (The LCD will already be showing the name and its count)
- If the count is above 999 the LCP will display ---.
- To clear a particular displayed count, press the F1 key on the IR remote. The control will ask for confirmation (CONF will display for Confirm).
- To clear all counters press the "+" key on the IR remote or the UP button on the control.
- To not clear all counters press the "-" key on the IR remote or the DOWN button on the control.
- All counters will be retained, even with the power off.

 12 -10 thru 14 are reserved diagnostics  
 13  
 14

### LEARN SAFETY LIMITS

**CAUTION: The door will move on its own when these routines (diagnostic 15 & 16) are initiated! Use extreme caution to avoid entrapment.**

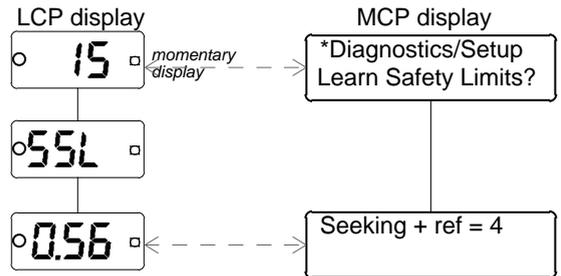

The C9150 control can measure the current draw of the door's motor and automatically set the "safety sensitivity" settings to the suggested values for the installation. These parameters are automatically set when a complete control setup is performed. A large adjustment in motor speed may require changing these settings. Instead of hand adjusting them, this routine will force the control to update the settings. Adjust the parameters to individual requirements as low as possible without causing nuisance stops.

-Press 15 or "+" up "-" down

-Press "?"

-This diagnostic will run 4 routines and store the highest current draw of each one.

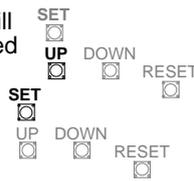

-The highest current value for each routine is displayed on the LCP

-Press UP till 15 is reached

-Press SET

-The name of the routine and the highest current draw will be displayed on the LCD

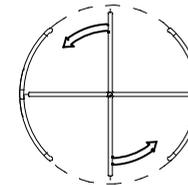

15

-The door will proceed through 4 quarterpoints at:

Normal speed forward  
 then  
 Reduced speed forward

Parameter 6 **Safety Sens** - Fwd and  
 Parameter 7, **Safety Sens** - Reduced  
 The highest running current will be stored and display and the parameter set at 200% of this value.

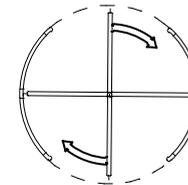

Forward at normal speed then reduced speed

-The door will back up through 4 quarterpoints at:

Reverse speed

Parameter 8 **Safety Sens** - Reverse  
 The highest running current will be stored and display and the parameter set at 200% of this value.

Reverse speed

-The door will proceed forward to the:

Next quarterpoint

Parameter 10 **Safety Sens** - Startup  
 The highest startup current will be stored and displayed and the parameter set at 200% of this value.

-The display will return to the main diagnostic menu.

If the door speed is changed re-do diagnostic 15 (reset safety sensitivity levels)

-Press **SU** again to exit

**NOTE:**  
 Factory defaults are set for testing and may not be suitable for individual conditions. See parameters 6 thru 10 for manual setup of safety sensitivity

-Press **RESET** to exit

H915.25

## 20. DIAGNOSTICS CHART 6

### Accessing the diagnostics from the infrared control.

### Accessing the diagnostics from the main control panel.

#### COMPLETE SETUP

**CAUTION: The door will move on its own when this routine is initiated! use extreme caution to avoid entrapment.**

This diagnostics allows a complete control setup to be performed. This diagnostic can be the most **DESTRUCTIVE** if it is performed accidentally. All parameters will be initially set to factory default and all counters are set to zero.

This diagnostic should always be performed when initially installing a door and **never** be performed without good reason otherwise.

-Press 16 or "+" up "-" down

-Press "?"

-Confirmation will be requested.

-To confirm press the "+" key

-Press the "+" key again to perform the diagnostic.

-To **CANCEL** the setup, press the "-" key.

The setup restores factory default settings to all parameters, and zeros all counters.

-It rotates the door through four quarterpoints and counts the total encoder pulses to determine how many pulses are present in each door quadrant.

-Finally, the door is rotated through additional quadrants to automatically set safety limits (see diagnostic 15).

Once all the above is complete, the display is returned to the main diagnostic menu.

-Press the lock key

LCP display  
16  
momentary display

-Confirmation will be requested

-Press the **UP** button again to perform the diagnostic.

-To **NOT** do the setup, press the **DOWN** button.

#### NOTE:

Factory defaults are set for testing and may not be suitable for individual conditions. Some parameters may require manual adjustment.

d 1A

\*Diagnostics/Setup

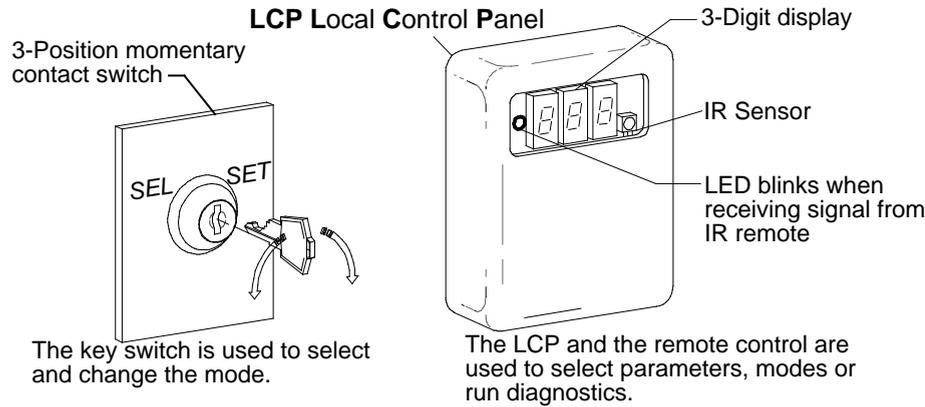

-Press the **RESET** button.

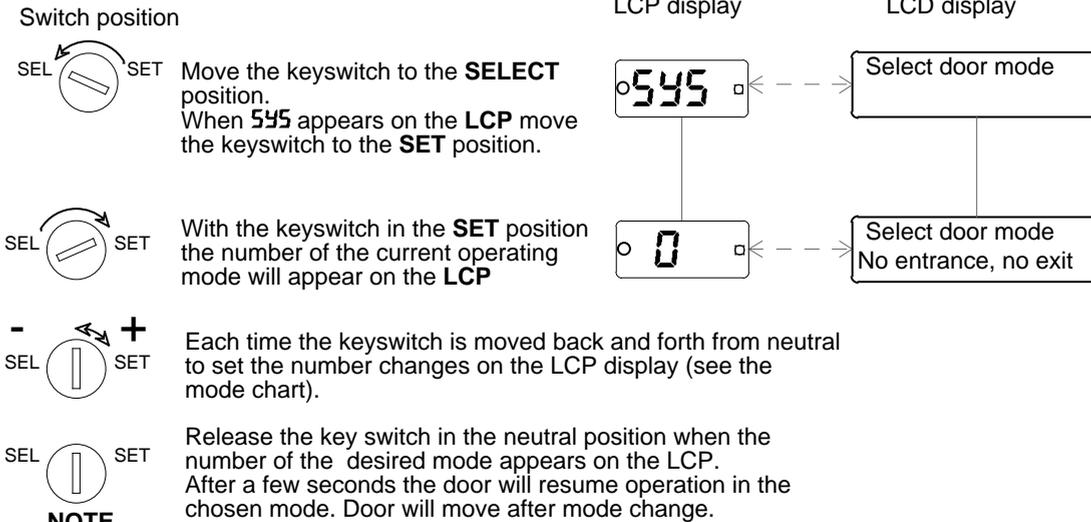

## 21. DOOR OPERATING MODES

The door must be inactive (standby condition) to change the mode.

### KEY SWITCH MODE SELECTION

### SELECTING A MODE

The number of available codes can be restricted to those required by the building management .  
Using parameters 44-59, certain modes can be restricted so they can not be accessed by the kewswitch.

### HARD WIRED MODE SELECTION

When parameter 60,remote mode select, is turned on, mode selection can NOT be made with the key switch or remote.  
When remote select is in use,remote mode A selects the door mode to use when terminals 3 and 4 of CN5 are open. Hard wired remote mode B selects the mode to be used when terminals 3 and 4 are closed.  
See parameter 60, 42 & 43.

### MODE CHART

The following chart shows the 12 modes that are always available regardless of the software version available.

MODE	STANDBY POSITION	ENTRANCE	EXIT
0	+	No entrance	No exit
1	+	Motec arms mat	Motec arms mat
2	+	Card	Card
3	+	Card	Motec arms mat
4	+	No entrance	Card
5	+	No entrance	Motec arms mat
6	+	No entrance	Mat actuates
7	+	Card	Mat actuates
8	+	Mat actuates	Mat actuates
9	n/a	Freewheels	Freewheels
10	X	No entrance	No exit
11	X	Motec	Motec

Standard operating software for the C9150 control does NOT allow "X" operation, except for a totally secure or free access door. All of these software versions end in even numbers (4.00, 4.02...)

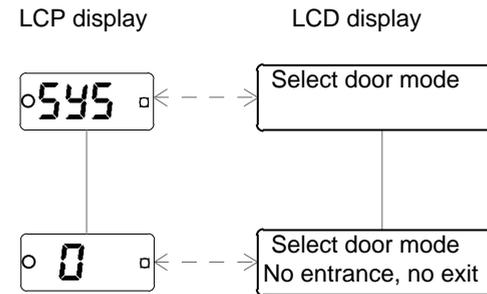

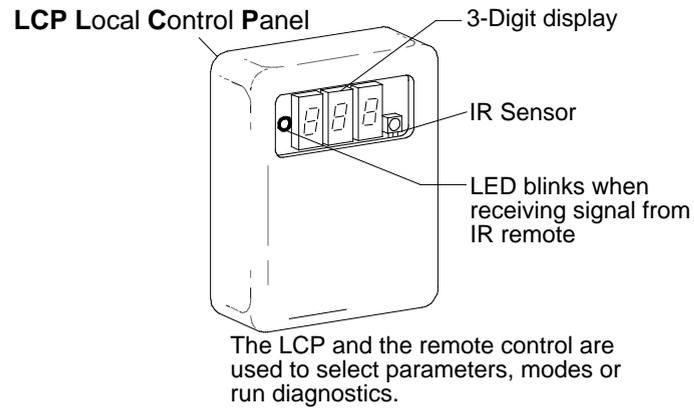

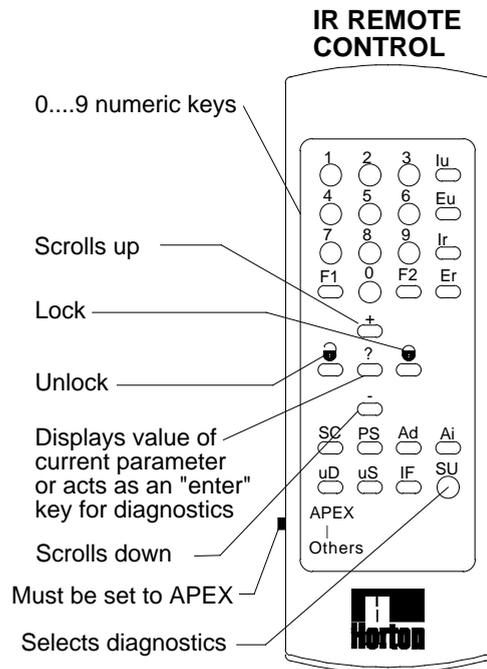

Software to permit "X" position operation is available for an additional charge due to a licensing agreement. These software versions end in odd numbers (4.01, 4.03...)

These versions add 4 unique "X" position modes as shown below, for a total of 16.

MODE	STANDBY POSITION	ENTRANCE	EXIT
12	X	Card	Card
13	X	Card	Motec
14	X	No entrance	Card
15	X	No entrance	Motec

## 21.1. DOOR OPERATING MODES (using the IR remote)

The door must be inactive (standby condition) to change the mode.

### Accessing the modes from the infrared control.

#### To change the mode setting:

- Point the IR remote at the LCP and press "SU"
- System "SYS" will display
- While on SYS push "?" current mode will display
- Press + or - to change the current setting

#### To control the lights:

- Point the IR remote at the LCP and press "SU"
- System "SYS" will display
- Press + or - to toggle the lights

## 22. PARAMETER CHART 1

-The door must be inactive (in standby condition)

### Accessing the parameters from the infrared control.

-Point the IR remote at the LCP and press unlock  
 -The red LED on the LCP display will flash - indicating the signal is being received.  
 -If the control was previously locked with a password, the LCP will show **UnL** to indicate that it is waiting for the unlock code. Enter the correct password within 5 seconds.

-If the correct password was entered or none was required, the parameter menu will be displayed. The display will be some parameter number such as **P. 1**

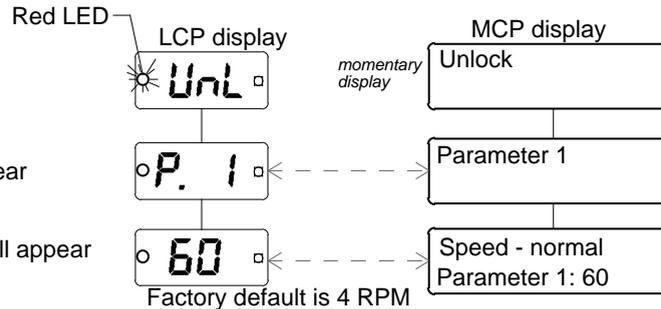

-Parameter will appear

-To view or adjust the setting of a parameter, briefly press the "?"

-Parameter value will appear

-Press the "+" or "-" key to change a yes or no or numeric parameter. Numeric values may be set with the number keys 0....9.

-Press the lock key to return to normal operation

#### NOTE:

After a few seconds with no entries the display will switch back to the parameter number. The new value will be stored in memory

### Accessing the parameters from the control itself.

-Press and hold the **SET** button while briefly pressing **UP**.

-Unlock will display

•Release the set button

-The parameter name, number and current setting will appear.

-The parameter value is changed with the **UP** and **DOWN** buttons.

•Press reset to return to normal operation

The values shown for parameters in the following charts are default values that are set when the complete control setup is performed. In most cases these values will be acceptable for ideal door performance. Do not adjust control parameters without having a desired goal in mind.

### Speed - (1)normal / (2)reduced / (3)reverse / (4&5) reserved

Parameters 1 thru 3 set the operating speed of the door during normal, reduced, and reverse run conditions (4 & 5 are reserved). The selected value directly equals the motor voltage. Acceptable values are 25 and up - the door will not turn below 25 volts. Horton suggest a run speed of 4 RPM as per ANSI 156.27. **CAUTION:** Higher settings increase the possibility of serious injury to pedestrians. These parameters should be set at the lowest acceptable speed.

#### Accessing parameters from the infrared control.

**P. 1 MAX 4 RPM per ANSI 156.27**

-Press "+" up "-" down or the number keys to locate the desired parameter

-Press "?" to view the parameter

-Press "+" up "-" down or the number keys to change the value

-Press **SU** again to exit

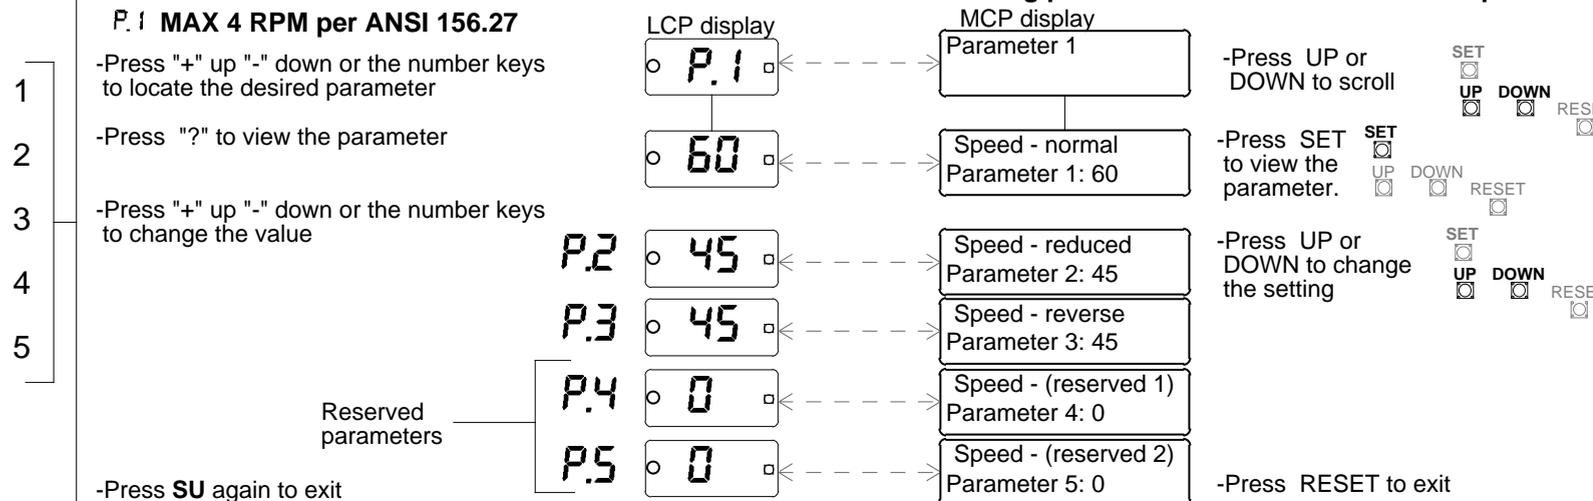

#### Accessing parameters from the main control panel.

-Press UP or DOWN to scroll

-Press SET to view the parameter.

-Press UP or DOWN to change the setting

-Press RESET to exit

## 23. PARAMETER CHART 2

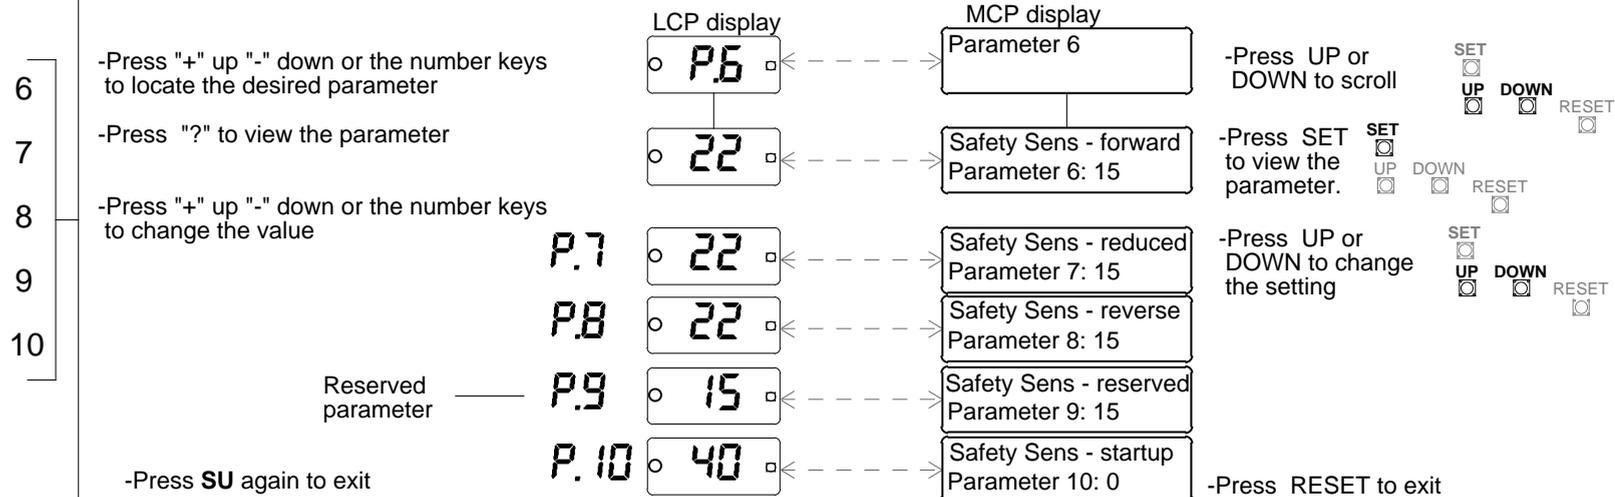

### Safety sens - forward / reduced / reverse / startup

Parameters 6 thru 8 and 10 (parameter 9 is reserved) set the sensitivity to increased motor current caused by obstructions to the doors. The default values are set at 15 - this means that a safety stop will occur if the motor current exceeds 1.5amps. During the control setup routine these values will be "tweaked" to 200% of the highest current found. For example: if during the forward run the maximum motor current detected was 1.2 amps, parameter 6 will be set at a value of 24 (2.4 amps).

Decreasing these values will provide greater safety and additional nuisance stops.

#### Accessing parameters from the infrared control.

#### Accessing parameters from the main control panel.

**NOTE:** If parameter 6, 7 or 8 is automatically set to 20 or more by the setup routine, or parameter 10 was set at 45 or more, excessive motor current is being drawn which may indicate a mechanical problem or a bind in the door.

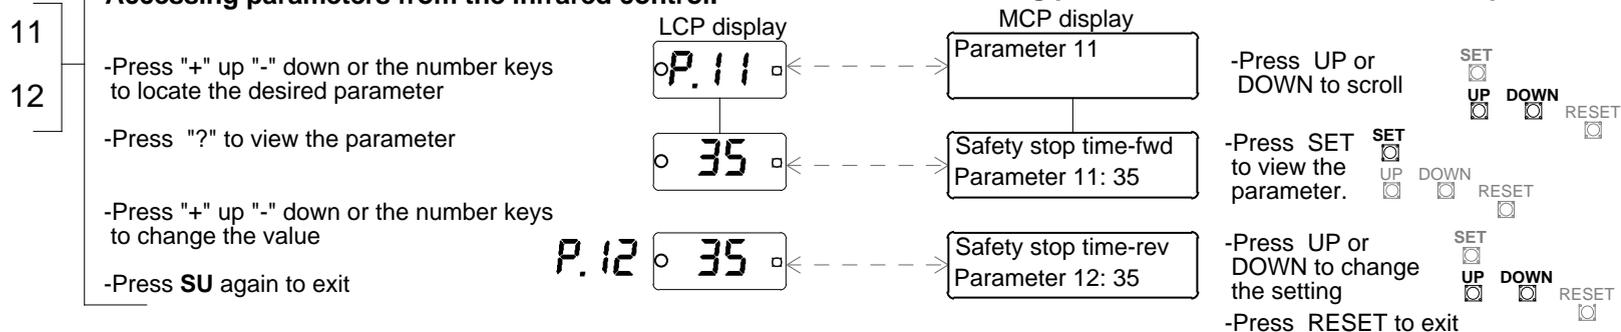

-All time delay parameters are measured in 1/10 second intervals. Example: a parameter setting of 100 = 10.0seconds. A setting of 20 = 2.0 seconds.

### Safety stop time fwd / rev

Parameters 11 & 12 determine how long the door will remain locked after a safety stop before it continues. Values below 20 (2.0 seconds) are NOT recommended.

#### Accessing parameters from the infrared control.

#### Accessing parameters from the main control panel.

## 24. PARAMETER CHART 3

### Inactive timeout

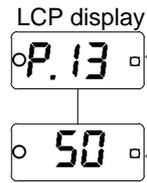

Parameter 13 sets the time the door will wait for mat activity before it "times out" following a valid card or motion detector presentation. When the door times out, it returns to the standby condition as follows:

- All card requests are cancelled, if any were active.
- All motec timers are reset to zero.
- Parameter 13 is meaningless during "X" quarterpoint operation.

#### Accessing parameters from the infrared control.

13

- Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- Diagram showing MCP display steps for parameter 13. The first display shows 'Parameter 13' and the second shows 'Inactive timeout Parameter 13: 50'. A control panel diagram shows SET, UP, DOWN, and RESET buttons.

-All time delay parameters are measured in 1/10 second intervals. Example: a parameter setting of 100 = 10.0seconds. A setting of 20 = 2.0 seconds.

### Security pass timeout

Parameter 14 sets the time the door will wait before it "times out" following a security pass request.

- When the door times out, it returns to standby condition.
- Parameter is meaningless during "X" quarterpoint operation.

#### Accessing parameters from the infrared control.

14

- Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- Diagram showing MCP display steps for parameter 14. The first display shows 'Parameter 14' and the second shows 'Security pass timeout Parameter 14: 100'. A control panel diagram shows SET, UP, DOWN, and RESET buttons.

## 25. PARAMETER CHART 4

### Idle mode timeout - For versions prior to build 28

Parameter 15 sets the time the door will wait for mat activity before it "times out" and proceeds to the next quarterpoint after it has been forced into the idle mode by a safety stop. The door must be totally idle before this timer begins running. Any activity whatsoever resets this delay. If parameter 15 is set to 100 and no cards, mats or motion detectors are encountered for 10 seconds following a safety stop to idle, the door resets itself by proceeding forward at reduced speed to the next quarterpoint position (either "+" or "x")

#### Accessing parameters from the infrared control.

- 15
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

-All time delay parameters are measured in 1/10 second intervals. Example: a parameter setting of 100 = 10.0seconds. A setting of 20 = 2.0 seconds.

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- The diagram shows a set of four buttons: SET, UP, DOWN, and RESET. Dashed arrows indicate the sequence of operations: UP or DOWN to scroll, SET to view the parameter, UP or DOWN to change the setting, and RESET to exit.

### Entry / exit alert time

Parameter 16 & 17 set the amount of time the entry and exit alert devices sound when a valid card is presented.

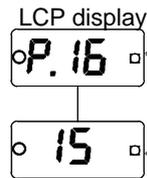

•Longer times may result in each user not receiving a separate alert.

Example: if these parameters are set for a 5 second alert and 2 cards are presented within 3 seconds.

•Very short times are not recommended, since the user will have difficulty hearing the alert.

#### Accessing parameters from the infrared control.

- 16  
17
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

•All time delay parameters are measured in 1/10 second intervals. Example: a parameter setting of 100 = 10.0seconds. A setting of 20 = 2.0 seconds.

#### Accessing parameters from the main control panel.

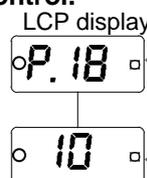

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- The diagram shows a set of four buttons: SET, UP, DOWN, and RESET. Dashed arrows indicate the sequence of operations: UP or DOWN to scroll, SET to view the parameter, UP or DOWN to change the setting, and RESET to exit.

### Verify contact time

Parameter 18 sets the length of time that the "entry / exit" verification relay contacts are active following a validated entry or exit.

#### Accessing parameters from the infrared control.

- 18
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

-All time delay parameters are measured in 1/10 second intervals. Example: a parameter setting of 100 = 10.0seconds. A setting of 20 = 2.0 seconds.

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- The diagram shows a set of four buttons: SET, UP, DOWN, and RESET. Dashed arrows indicate the sequence of operations: UP or DOWN to scroll, SET to view the parameter, UP or DOWN to change the setting, and RESET to exit.

## 26. PARAMETER CHART 5

19 **Reserved**  
 Thru Parameter 19 thru 22 are for future use.  
 22

### Motec delay time (X)

Sets the length of time that the door runs when an active motion detector is triggered in any "X" mode of operation. This parameter allows adjustment of the total time that the door remains active without having to set the delay in the motion detectors themselves.

#### Accessing parameters from the infrared control.

- Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press RESET to exit
- 
- MCP display  
 Parameter 23  
 Motec delay time (x)  
 Parameter 23: 50
- 

### Safety stops to idle - Prior to build 30

Parameter 24 sets the number of safety stops that must be encountered before the door switches to "idle" mode.  
 -With the default value of 1 in use, the first motor overcurrent or nosing encountered places the door in the idle mode.  
 -If a value of 2 is used, the first safety stop will stop the door and lock the brake for the duration of the time set in parameter 11. After this timer expires, the door will attempt to move forward again. A second motor overcurrent or nosing will place door in idle mode.  
 -Values higher than 2 will result in additional "lock the brake" sequences before an idle is permitted.  
 -If idle operation is never desired, parameter 24 may be set to a very high value such as a 100.  
 -The safety stop counter is reset at every "+" quarterpoint. "Idle" operation is not permitted during the 45° of door revolution for each "x" position to the following "+" position. If motor overcurrent or a safety nosing is encountered in this door quadrant, the door *always* locks the brake (if required) and times the safety stop.

#### Accessing parameters from the infrared control.

- Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- 
- MCP display  
 Parameter 24  
 Safety stops to idle  
 Parameter 24: 1
-

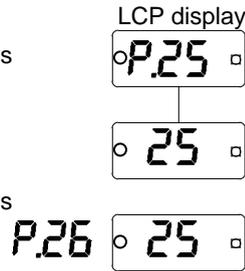

## 27. PARAMETER CHART 6

### (25) Max entry / (26) exit cards

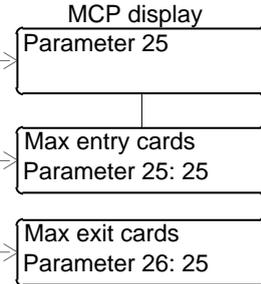

Parameters 25 and 26 set the maximum number of entry and exit cards that are permitted in the card stacks at any time. Additional card requests are ignored.

#### Accessing parameters from the infrared control.

- 25 -Press "+" up "-" down or the number keys to locate the desired parameter
- 26 -Press "?" to view the parameter
- Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

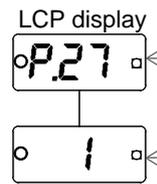

- Press UP or DOWN to scroll
- Press SET to view the parameter.
- Press UP or DOWN to change the setting
- Press RESET to exit
- 

### Backup warnings

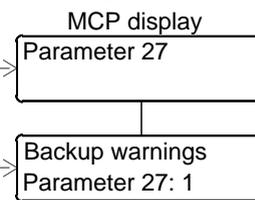

Parameter 27 sets the number of complete voice annunciations that will be performed following an attempted security breach before the door backs up.

#### Accessing parameters from the infrared control.

- 27 -Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
- Press SET to view the parameter.
- Press RESET to exit
- 

### 29 Thru 35,37 Reserved

Parameters 28 through 35, 37 are reserved for use in future software

### Idle beyond "X" - For versions prior to build 30

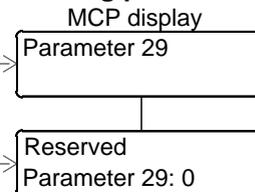

Parameter 36 determines the number of degrees past "X" where bump to idle is still active; up to a max of 20 degrees. The previous software goes to idle within either a safety edge activation or a torque stop between "+" & "x". After "x" it drives in slow speed to the next "+" to prevent a security breach.

#### Accessing parameters from the infrared control.

- 36 -Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
- Press SET to view the parameter.
-

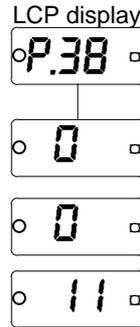

## 28. PARAMETER CHART 7

### Relay (38)K2, (39)K3 & (40) K4 mapping

Parameters 38, 39 and 40 set the function of relays K2, K3 and K4 on the motherboard.

#### Accessing parameters from the infrared control.

- 38 - Press "+" up "-" down or the number keys to locate the desired parameter
- 39 - Press "?" to view the parameter
- 40 - Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
- Press SET to view the parameter.
- Press UP or DOWN to change the setting
- Press RESET to exit
- 

When set to the following values, each relay may be used to perform any of the following functions.

- |  |  |  |
|--|--|--|
| 0 Relay disabled - no function                       | 6 Entrance is permitted ("green light")          | 13 Leading nosing shorted after (X) position.              |
| 1 Door in idle mode                                  | 7 Exit violation attempt in progress             | 14 Door jams without tripping safety nosing (torque stop). |
| 2 Door is busy                                       | 8 Exit verification (parameter 18 sets duration) | 15 Combination of functions 12, 13 & 14.                   |
| 3 Entrance violation attempt in progress             | 9 Exit alert (parameter 17 sets duration)        |  |

| 5 Entrance alert (parameter 16 sets duration)        | 11 Door is secured                               |  |
|  | 12 Violation lockdown signal                     |  |

More than one relay may be used for the same function, if additional contacts are needed.

When mapped to function 11, the relay doubles as a power failure detection contact, since the relay will be held on whenever the door is secured.

### Default door mode

Parameter 41 works in conjunction with parameter 63, fixed power-up mode, to determine how the door operates when power returns after a power failure.

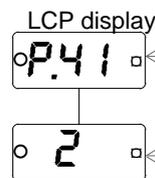

- If parameter 63 is turned on, parameter 41 determines what mode the door uses after power returns.

- The default is mode 2 ("+" operation, card in / card out.)

- If parameter 63 is turned off, the door always returns to whatever mode was in use prior to the power failure.

#### Accessing parameters from the infrared control.

- 41 - Press "+" up "-" down or the number keys to locate the desired parameter
- Press "?" to view the parameter
- Press "+" up "-" down or the number keys to change the value
- Press **SU** again to exit

#### Accessing parameters from the main control panel.

- Press UP or DOWN to scroll
- Press SET to view the parameter.
- Press UP or DOWN to change the setting
- Press RESET to exit
-

## 29. PARAMETER CHART 8

### Hardwired (42) mode A / (43) mode B

Parameters 42 and 43 are only active if parameter 60, hard wired mode select, is turned on.

When remote mode select is in use:

-Remote mode A selects the door mode to use when Aux A input is not active (terminals 3 & 4 of CN 5 are open).

-Remote mode B selects the door mode to use when Aux A input is active (terminals 3 & 4 of connector CN5 are shorted together)

-Parameters 42 and 43 and 60 are use when the door mode is remotely controlled by a building management system.

-If Parameter 60, remote mode select, is not in use the door mode is set with the LCP and parameters 42 and 43 are meaningless.

42  
43

#### Accessing parameters from the infrared control.

-Press "+" up "-" down or the number keys to locate the desired parameter

-Press "?" to view the parameter

### Mode 0 thru 15 permitted

Parameters 44 through 59 determine which modes are available at the keyswitch (LCP). Any mode that is set to NO will be skipped when the keyswitch is use to select a new door mode.

EXAMPLE: Setting parameter 53, mode 9 permitted, to "no" (door freewheel) mode cannot be selected by the keyswitch.

-If the software does not enable the "x" operation, the default setting for mode 12 permitted thru mode 15 permitted is "no".

In these restricted versions, these parameters can be changed to "yes" by the technician, but the keyswitch will continue to skip over the unpermitted modes.

-If an attempt is made to use the restricted modes by enabling parameter 60, remote mode select, and setting either parameter 42, remote mode A, or parameter 42, remote mode B, to a restricted mode, the door will default to mode 2, "+" operation card in / card out instead

"X" operation requires an upgrade in software.

#### Accessing parameters from the infrared control.

-Press "+" up "-" down or the number keys to locate the desired parameter

## 30. PARAMETER CHART 9

### Remote mode select

Parameter 60 determines whether the door's operating mode is set locally by the keyswitch (LCP) or remotely by a building management system or by dry contacts. (See remote mode A, parameter 42, for additional information).

#### Accessing parameters from the infrared control.

- 60
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

#### Accessing parameters from the main control panel.

- MCP display
- 
- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- The diagram shows two states of the MCP display. In the first state, the display shows 'Parameter 60'. In the second state, the display shows 'Remote mode select Parameter 60: off'. Dashed arrows indicate the transition between these two states. To the right of the MCP display are three buttons: SET, UP, DOWN, and RESET.

### Slows to qpt x modes

When parameter 61 is turned on, the door will slow from normal speed to reduced speed at the final "+" position just prior to quarterpointing in any "x" mode of operation.

Parameter 61 is only used in conjunction with "x" operation.

#### Accessing parameters from the infrared control.

- 61
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

#### Accessing parameters from the main control panel.

- MCP display
- 
- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- The diagram shows two states of the MCP display. In the first state, the display shows 'Parameter 61'. In the second state, the display shows 'Slows to qpt modes Parameter 61: off'. Dashed arrows indicate the transition between these two states. To the right of the MCP display are three buttons: SET, UP, DOWN, and RESET.

### Clears mats every cycle

When parameter 62 is turned on, the door will stop at every "+" position regardless of whether another entrance or exit is permitted or not, and will insist that all mats be cleared after each cycle before the next cycle is permitted.

Parameter 62 is only used in connection with "+" operation.

#### Accessing parameters from the infrared control.

- 62
- Press "+" up "-" down or the number keys to locate the desired parameter
  - Press "?" to view the parameter
  - Press "+" up "-" down or the number keys to change the value
  - Press **SU** again to exit

#### Accessing parameters from the main control panel.

- MCP display
- 
- Press UP or DOWN to scroll
  - Press SET to view the parameter.
  - Press UP or DOWN to change the setting
  - Press RESET to exit
- The diagram shows two states of the MCP display. In the first state, the display shows 'Parameter 62'. In the second state, the display shows 'Clr mats every cycle Parameter 62: off'. Dashed arrows indicate the transition between these two states. To the right of the MCP display are three buttons: SET, UP, DOWN, and RESET.

## 31. PARAMETER CHART 10

### Fixed power-up mode

If parameter 63 is off, after a power failure or other system reset the door will always return to the mode of operation last in use.  
If parameter 63 is on, the door will use the mode selected in parameter 41 - default door mode.

#### Accessing parameters from the infrared control.

-Press "+" up "-" down or the number keys to locate the desired parameter

-Press "?" to view the parameter

-Press "+" up "-" down or the number keys to change the value  
-Press **SU** again to exit

LCP display

### Brake Locked in auto mode

Parameter 64 chooses whether the brake will be locked in modes that do not require it.

-Mode 8 (mat in/out), mode 9 (freewheel), mode 10 (motec in/out) do not require the core brake.  
All other modes are completely or partially secured, and the brake will always be use.

#### Accessing parameters from the infrared control.

-Press "+" up "-" down or the number keys to locate the desired parameter

-Press "?" to view the parameter

-Press "+" up "-" down or the number keys to change the value  
-Press **SU** again to exit

65

### Reserved

Parameters 66 through 99 are reserved on/off. They are not used by the current software.

66  
Thru  
98

### Violation lockdown

If parameter 99 is off, (DEFAULT) the door will lockdown if a forced entry is attempted and the door is pushed approx. 4" opposite its direction of rotation.  
A signal will be sent to the security system if available. (K2, K3 or K4 must be mapped to value 12)

If parameter 99 is on, the door will not lockdown, but a signal will be sent to the security system if available. (K2, K3 or K4 must be mapped to value 12)

**Access and set the paramete as described above**

99

## 32. PARAMETER QUICK REFERENCE CHART

PARAMETER	FUNCTION	DEFAULT	Comments	SECTION

13	↓	↓	19
14	Reserved	Reserved for future use	19
15	Learn safety limits	Sets the safety limits by current sensing	19
16	Complete setup	Restores factory default settings to all parameters, and zeros all counters	20

### 34. ERROR CODES

All errors except 7 are considered major and require a keyswitch reset to clear them and restart the door.

#### LCP display

- Er 1 Direction error** (the door was pushed in the wrong direction when not in idle).  
If the door is properly set up this run time error will never be seen because the safety stop will kick in before the door can be stopped manually and pushed in the wrong direction.
- Er 2 Drive system failure** - This is either a run time or setup error and indicates that the motor could not be ramped to the proper voltage. (Motor test see H915.41 & 42)
- Er 3 Motor current excessive** - only occurs during setup phase (Motor test see H915.41 & 42)
- Er 4 No reference switch** - only occurs during setup phase (Encoder test see H915.41 & 42)
- Er 5 Encoder phasing incorrect** - only occurs during setup phase (Encoder test see H915.41 & 42)
- Er 6 No encoder pulses received** - only occurs during setup phase (Encoder test see H915.41 & 42)
- Er 7 Brake failure** - A run time error that is displayed if insufficient brake voltage and / or current are detected when the door is supposed to be secure. It is self-clearing when proper voltage is restored. (Brake test see H915.41 & 42)
- Er 8 High voltage DC failure**
- Er 9 System failure**

# 35. TROUBLE SHOOTING AND ADJUSTMENTS

## For Security revolver MOTOR, BRAKE AND ENCODER

If trouble is found in the C9007-1 use this supplement to locate the specific part and replace only the defective part. HORTON AUTOMATICS WILL NO LONGER SERVICE THE 9007-1 AS A COMPLETE UNIT.

The following test are conducted using publication H915 (C9150-2/3 setup instructions)

### MOTOR TEST for VOLTAGE and CURRENT

Note: See H915.7 to access the diagnostic setup.

Refer to diagnostic 3 of H915.22. The test may be ran using the IR control or the control itself.

When diagnostic 3 is selected the motor should run.

- The voltage should read 60vdc  $\pm 10\%$  if parameter 1 is at factory default
- The current should read .50 to 1.5

If the current is high- ( over 1.5) check the resistance in the motor (500 rpm motor should read 13 to 18 ohms

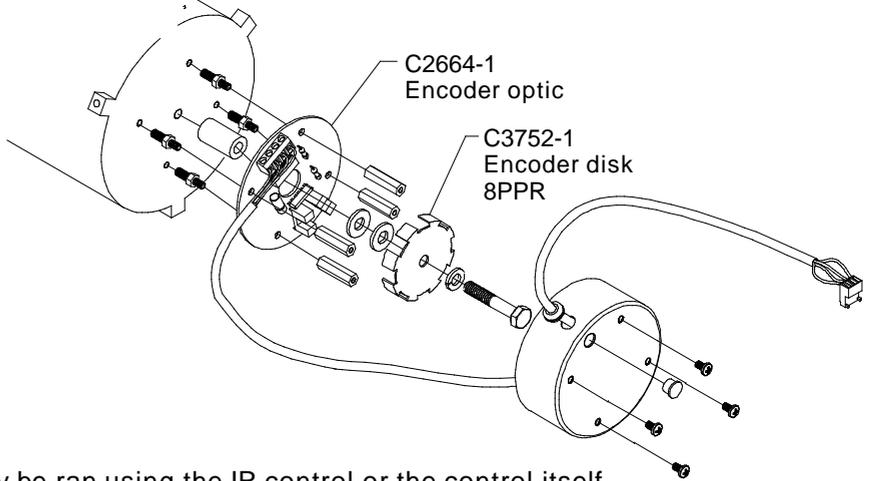

If the current is absent or low- check wiring, connections and resistance.

### ENCODER TEST

Refer to diagnostic 6 of H915.23. The test may be ran using the IR control or the control itself.

When diagnostic 6 is selected the encoder count is displayed

If a defective part is found it can be individually replaced.

### BRAKE TEST

Refer to diagnostic 4 & 5 of H915.22. The test may be ran using the IR control or the control itself.

If the brake is mechanically engaging there will be an audible click and the door can't be pushed.

- The voltage should read 100vdc  $\pm 10\%$
- The current should read approx 200ma

If the current is zero or close to it, check the wiring and connections.

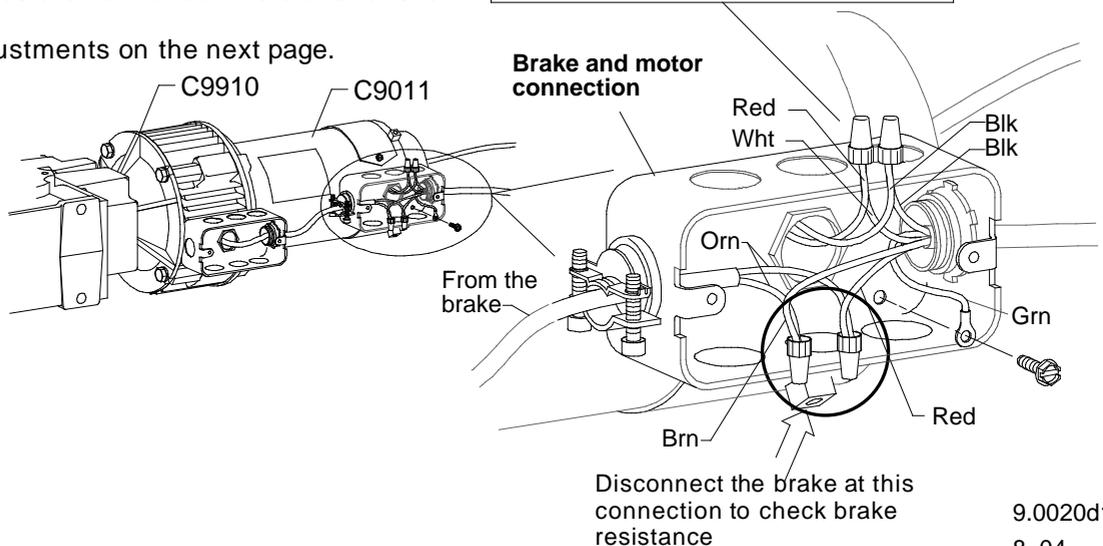

If no wiring problems are found - disconnect the brake at the location shown below.

### DISCONNECT POWER FOR THIS TEST

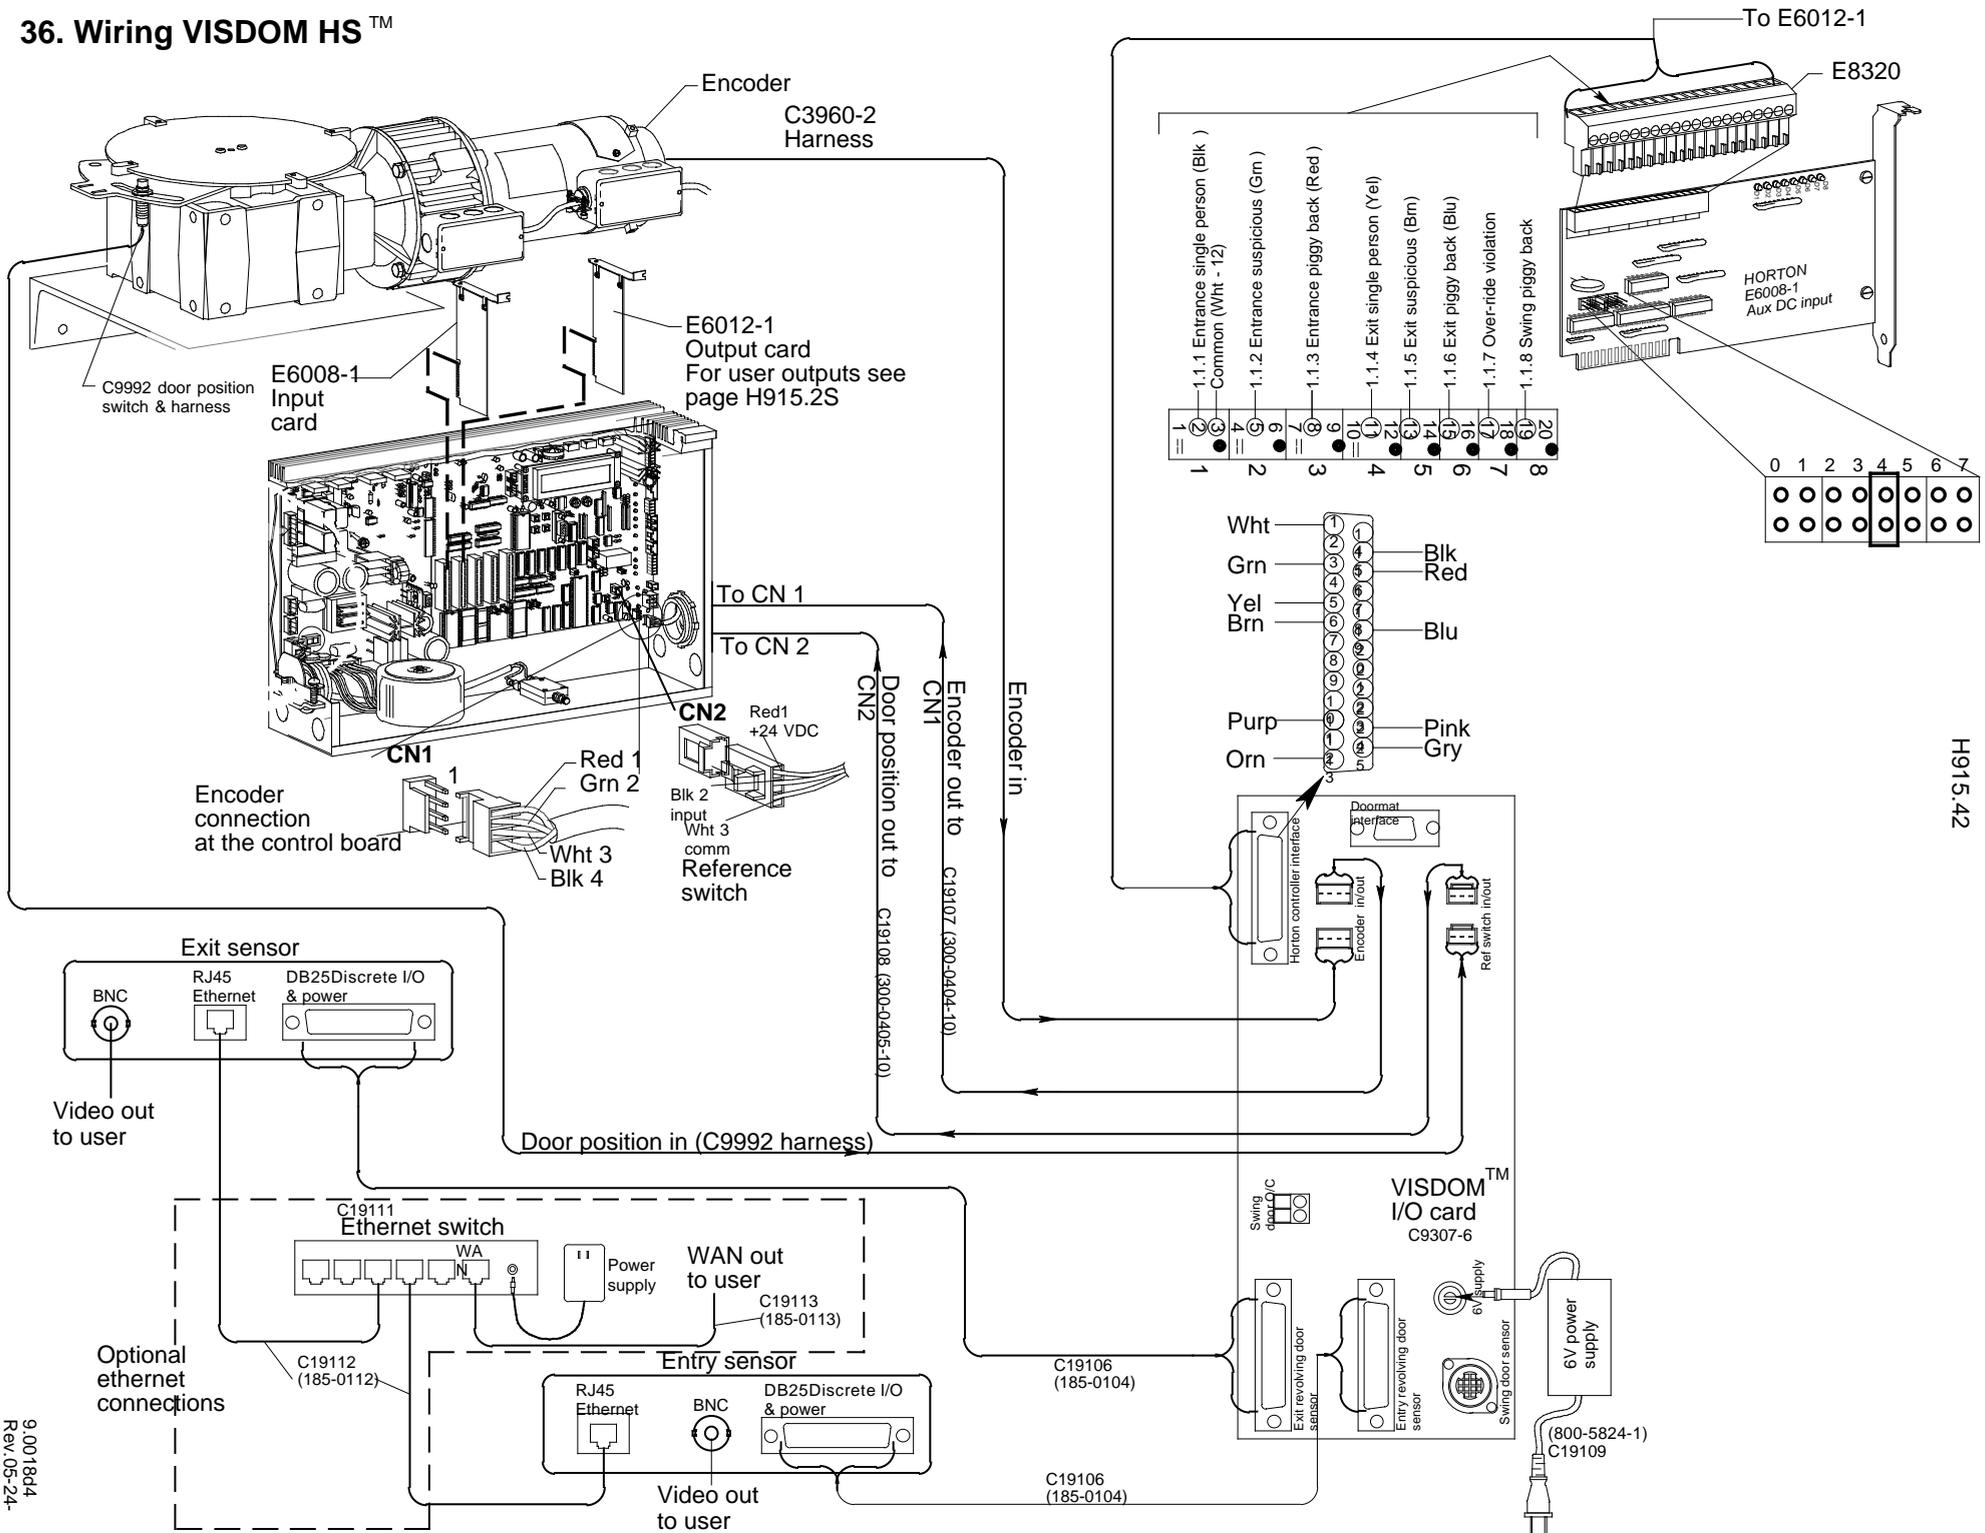

- The resistance range should be 450 ohms  $\pm 10\%$
- If the resistance is zero the coil is shorted and C9910 should be replaced
- If the resistance is infinite the coil is open and C9910 should be replaced

-If the voltage and resistance are normal but the brake fails to engage

check the mechanical adjustments on the next page.
