protected keyway

The Security Leg

The Yale KeyMark keyway has three distinct components: an upper portion or blade, a middle ledge, and a unique, lower angled portion or leg which exits the plug at an angle. This Security Leg keyway offers these advantages:

1. Keyway differentiation by angle;
2. Increased pick resistance;
3. Prevents other manufacturers' or other angle users' keys from entering the cylinder;
4. A unique and strong key with true key control;
5. A key blank of added thickness for extra strength and durability;
6. Prevents duplication of keys on standard key machines.

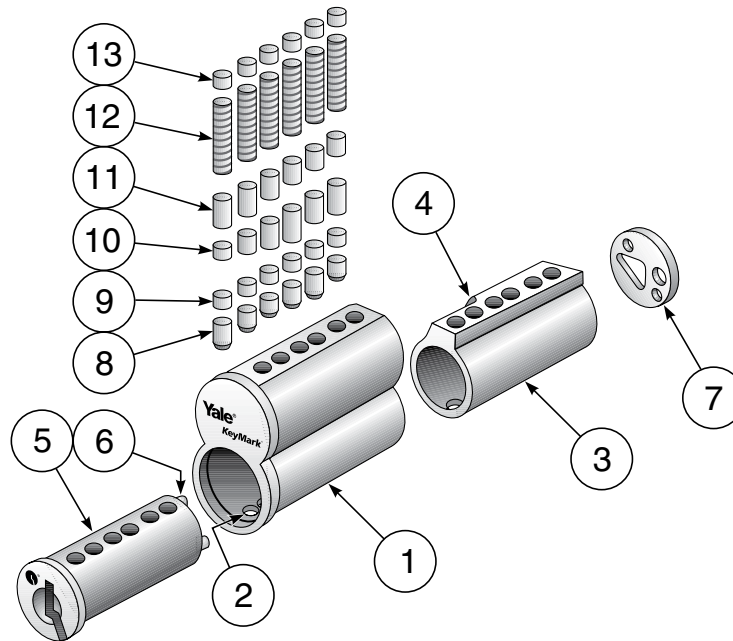

mortise/rim cylinders

| Item | Description | Qty. | Mortise Model No. | Rim Model No. | Remarks |
|------|------------------------------|--------|-------------------|---------------|---|
| 1 | Mortise Plug-.511" | 1 | K150 | NA | Length, keyway and finish required |

Lubrication

Yale® KeyMark® cylinders are lubricated from the factory with a Teflon® lubrication. Cylinders should be lubricated periodically depending upon environmental conditions and usage. LAB Lube is the approved lubricant.

Caution: It is not recommended to lubricate cylinders with oil or to mix lubricants.

pin specifications

Yale® KeyMark® cylinders use selected top and bottom pins that are spool type for added security. While other manufacturers' pin kits can be used with Yale KeyMark cylinders, the strict tolerances of pins and the added security from the spool pins are good reasons to use original Yale KeyMark pins. Also, use of non-factory original pins can void the warranty.

To minimize the possibility of decoding the cylinder combination by reading the color of the pins, never use colored replacement pins.

Bottom pins are made of high-quality nickel silver. This distributes wear evenly between the key and the pins.

Top, build-up and master pins are made of brass.

- Pin increment is .0125"
- Pin diameter is .1085"
- Bottom pin tip flat is .015"
- Bottom pin crown is 45° x .008"; Top pin crown is 30° x .008"
- Total stack height is:
 - .3975" for small format interchangeable core cylinders (23)
 - .2375" for non-small format interchangeable core cylinders (19)

Master, Build-up and Top Pins

key biting specifications

Applies to all Yale® Keymark® keyways

"A2" PINNING SPECIFICATIONS

MACS: 9

| | |
|--------------------|----------|
| Increment: | .0125" |
| Progression: | Two Step |
| Blade Width: | .310" |
| Depth Tolerance: | ±0.0015" |
| Spacing Tolerance: | ±0.0010" |

All Cuts Are Read and Written TIP to BOW

All depths are referenced from the offset or ledge of the key rather than from the bottom of the blade.

key cutting

K900 Code Cutting Punch

- Automatic Key Advance
- Interchangeable Vise Assembly

- | | |
|------------------|-------------------|
| 1. Depth Knob | 3. Mounting Holes |
| 2. Paddle Handle | 4. Vise Assembly |

Keys should only be cut using the Yale® KeyMark® K900 Code Cutting punch or other approved machines. These machines and special vises are only available through *Yale*.

Each code punch machine is designed to cut only the unique angle of *Yale Keymark* keys.

Any inserts or jaws for other machines, available in the future, will also only be available through *Yale*.

The K900 Code Cutting Punch can rest on a work bench or it can be mounted securely to the bench by means of the two mounting holes located in the base.

Note: The code punch uses a tip reference and all keys are cut tip to bow. LFIC Control Keys are furnished pre-cut in the tip position. When referencing the bitting list, the “0” cut used on the tip bitting is only to advance the vise one position.

When cutting these keys:

1. Insert the keyblank into the vise assembly.
2. Turn the depth knob to “0” and depress the paddle handle.

This will advance the vise assembly to the correct starting position for cutting the key.

3. Continue with cutting the key depths.

combinating cylinders

Calculating the “A2” Pin Stack

Rules For Top Loading

K600 (SFIC) Cylinders

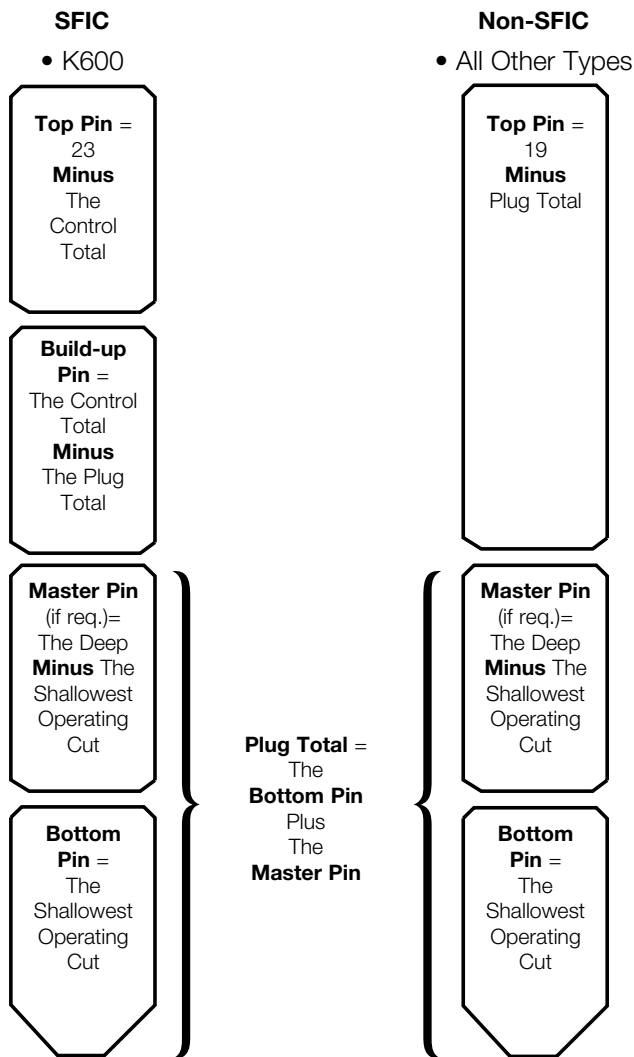

For best results, pin the cylinder one chamber at a time.

- Pin the cylinder to the operating keys – change key(s) and master keys(s) – using bottom and master pins
- Pin the cylinder to the control key by inserting a “build-up pin” in each chamber. To determine the build-up pin numbers:
 - Add 10 to each of the control key cuts. This is called the “control total”;
 - For each chamber, subtract the bottom pin and master pin total (plug total) from the control total;
 - Use the resulting number as your build-up pin number.
- Load the top pin. To determine the top pin number, subtract the control total from 23. Reference the “Quick Subtraction Chart” for quick calculation (see page 15).
- The total stack height (the sum of all the pins) must equal 23.
- After all chambers have been pinned, insert the core into the capping block, load springs, and cap.

Rules For Top Loading K100/K200/K300/K400/K800 (Non-SFIC) Cylinders

For best results, pin the cylinder one chamber at a time.

- Pin the cylinder to the operating keys – change key(s) and master keys(s) – using bottom and master pins
- Load the top pin. To determine the top pin number, subtract the bottom pin and master pin total (plug total) from 19. Reference the “Quick Subtraction Chart” for quick calculation (see page 17).
- The total stack height (the sum of all the pins) must equal 19.
- After all chambers have been pinned, insert the core/cylinder into the capping block, load springs, and cap.

See page 14 & 15 for completed sample and blank combinating worksheets of SFIC cylinders.

See page 16 & 17 for completed sample and blank combinating worksheets of Non-SFIC cylinders.

master keying

Standard Key Coding System

Standard Master Key System: 2 Levels of Keying

Master key is assigned two letters. Change key numbers come before the MK letters.

Grand Master Key System: 3 Levels of Keying

Grand master key is assigned one letter. Masters under the GMK are assigned two letters, the first being the same as the GMK letter. Change key numbers come after the MK letters.

Great Grand Master Key System: 4 Levels of Keying

Great grand master key has the symbol of GGM. Grand master keys are each assigned one letter. Masters under the GMK are assigned two letters, the first letter being the same as the GMK letter. Change key numbers come after the MK letters.

Special Keying Situations

Cylinder is operated by the change key and GMK, but no MK: Change key numbers come after the single GMK letter. Example: A1, A2, B1, etc.

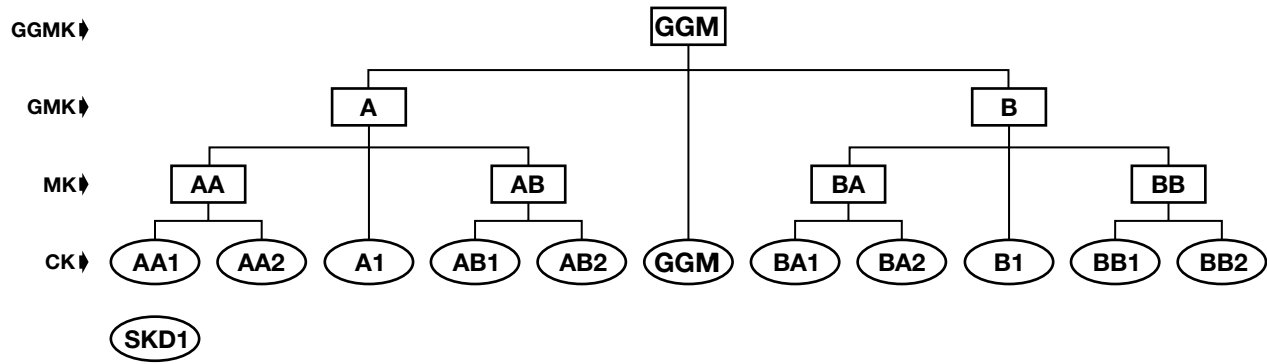

Cylinder is operated by change key and GGM only, but no GMK or MK: Use symbols GGM1, GGM2, etc.

Cylinder is operated by one of the system's change keys but no MK's of any level: Suffix "(NMK)" to the regular symbol. Example: 3AA(NMK), AA7(NMK), etc.

Cylinder is operated by no keys in the system other than its own individual key: Single keyed sets SKD1, SKD2, etc.

master keying

Master Key System Specifications

Refer to page 10 for the Key Bitting Specifications.

Expansion Specifications

Yale® KeyMark® systems should include expansion specifications which indicate the maximum planned quantity of theoretical bitting combinations needed at each level of keying. The expansion specification is the arithmetic expression of the expansion in the form of numbers separated by dashes. Each number refers to the level of keying system to which it relates.

Examples:

For a 2-level system requiring fifty change keys, the expansion specification would be: 1-50

For a 3-level system requiring two masters under the grand and forty change keys under each master, the expansion specification would be: 1-2-40

For a 4-level system requiring three grands each with ten masters with fifty changes, the expansion specification would be: 1-3-10-50

The number of changes needed directly operated by the GGM or GM is indicated in parenthesis after that level's specification. For example: 1(10)-4-75 would be read "one grand master with four masters under the grand, seventy-five changes under each master, and ten changes directly under the grand master only."

The following charts are examples of master keying specifications for Yale KeyMark 6- and 7-pin master key systems:

| | | 6-pin | | | |
|---------|---|-------|----|----|------|
| | | GGM | GM | MK | CK |
| Level 2 | | ⊘ | ⊘ | 1 | 4096 |

FINISH CHART

| ANSI Code | Finish Description |
|-----------|--|
| 612* | Satin bronze, clear coated |
| 613* | Dark oxidized satin bronze, oil rubbed |
| 626* | Satin chrome plated |
| 630 | Satin stainless steel |
| 689 | Aluminum painted |
| 691 | Light bronze painted |
| 695 | Dark bronze painted |

*Trim finish option only.

INTRODUCTION

Installation Notes

1. Only fire-rated components can be used on fire-rated exit devices. Doing otherwise will void any type of product warranty, labeling and listing. Any component bearing the UL mark for fire rating cannot be supplied Ref. items with symbol.
2. Refer to the templates and installation instructions for complete door preparation and installation requirements.
3. Machine screws are provided for steel reinforced doors, threaded-to-the-head AB Type screws are provided for wood door applications. In addition, sex nuts and bolts are provided for fire-rated devices and are optional for non-rated devices. It is recommended that sex nuts and bolts be used for all exit device applications. This will improve the performance and extend the life of the product.

How to Order Parts

1. In order to simplify the ordering procedure and maintain regulatory compliance, parts are only available as listed
2. To order parts, provide the appropriate quantity, part number, finish, hand (when required) and description as directed and illustrated below.

For example, use the following configuration to order:

- A) ten mullion stabilizer kits (page 38) to match 600 application (primed for painting)
- B) one surface vertical rod latch cover (page 6) in bright brass

| | Quantity | Part Number | Finish | Hand | Description |
|---|----------|------------------|--------|------|-----------------|
| A | 10 | 81-9500-1417-FIN | 600 | --- | Stabilizer Kit |
| B | 1 | 60-7010-X040-FIN | 605 | --- | Top Latch Cover |

For assistance, contact your authorized Yale® distributor or sales agency, or visit our website at www.yalecommercial.com.

Handing

Left Hand Reverse: Hinges on left, opens outward. For handed devices, specify LHR.

Right Hand Reverse: Hinges on right, opens outward. For handed devices, specify RHR.

Note: Doors with Panic-Exit and Fire Exit hardware must open out. Therefore, hands must be reverse bevel.

HANDING INSTRUCTIONS

Rim Devices

2100/2100F Series

These devices are non-handed.

Surface Vertical Rod Devices

2110/2110F Series

Remove four screws and vertical lifter assembly. Turn device to opposite (180 degrees) orientation, insert lifter assembly and reinstall screws.

NOTE: Lifter must fit under lift block as shown.

HANDING INSTRUCTIONS

Lever Handle Trim

1. Remove cotter pin.
2. Remove castle nut.
3. Observe spring orientation:
 - LHR:** Red spring (part # 60-7000-1225-999) Short lead is at 1 o'clock and long lead is to lever side of stump at 6 o'clock.
 - RHR:** Blue spring (part # 60-7000-1224-999) Short lead is at 11 o'clock and long lead is to lever side of stump at 6 o'clock.
4. Remove round housing, spring and spacer.
5. Note orientation of "gap" which governs rotation in gear and remove gear.
6. Rotate lever 180°.
7. Flip gear over and reinstall, observing proper gap orientation for new direction of rotation:
 - LHR** 6 - 8 o'clock
 - RHR** 4 - 6 o'clock
8. Install spring of opposite hand (color). Place spring around spindle with long lead against gear and to lever side of post. Place housing (gap side toward lever) over spring and spindle until square in housing begins to slide down on spindle. While applying downward pressure on housing, wind short lead of spring toward lever until housing snaps into place.
9. Replace spacer in housing. Spring, housing and spacer should now be oriented as indicated in step 3 above.
 - Note:** Housing gap will always be to the lever side and spring will be slightly preloaded when properly installed.
10. Be sure lever thimble is seated properly in escutcheon. Reinstall nut snugly, but do not over tighten. Lever should rotate freely.
11. Replace cotter pin.

RIGHT-HAND REVERSE (BLUE SPRING)

LEFT-HAND REVERSE (RED SPRING)

TROUBLESHOOTING GUIDE

1. Many problems with the operation of exit devices are caused by factors other than the device itself. Among the most common is a misalignment or an improper fit of the door within the frame.

2. Another common source of problems is improper installation. Even if all cutouts and screw holes are properly located, exit devices must be securely fastened to properly reinforced doors. Hollow doors and frames with a structural thickness (metal skin plus reinforcement, or solid hardwood) must have at least three full screw threads to be considered reinforced.

3. Most problems with dogging occur on vertical rod devices. When the dogging function is hard to engage or will not work at all, the rods may be incorrectly adjusted, allowing the mechanism to bottom out. Readjust rods per the device instructions or as outlined on the previous pages.

introduction

Installation Notes

1. Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Yale Locks & Hardware makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.
2. Refer to the templates and installation instructions for complete door preparation and installation requirements.
3. Machine screws are provided for steel reinforced doors, threaded-to-the-head AB Type screws are provided for wood door applications. In addition, sex nuts and bolts are provided for fire rated devices and are optional for non-rated devices. It is recommended that sex nuts and bolts be used for all exit device applications. This will improve the performance and extend the life of the product.

How to Order Parts

1. In order to simplify the ordering procedure and maintain regulatory compliance, parts are only available as listed
2. To order parts, provide the appropriate quantity, part number, finish, hand (when required) and description as directed and illustrated below.

For example, use the following configuration to order:

A) ten escutcheon assemblies (page 30) in satin chrome

B) one surface vertical rod latch cover (page 8) in bright brass

| | Quantity | Part Number | Finish | Hand | Description |
|---|----------|------------------|--------|------|-----------------------|
| A | 10 | 60-7000-0612-FIN | 626 | — | Escutcheon Assemblies |
| B | 1 | 60-7010-X040-FIN | 605 | — | Top Latch Cover |

For assistance, contact your authorized Yale distributor, sales agency or visit our website at www.yalelocks.com.

Finishes

| ANSI/BHMA Code | Finish Description |

As with exit device trim you must order a cylinder to go with a keyed removable mullion. The Yale® keyed removable mullion accepts a standard 6-pin 2153 mortise cylinder with cam #2160. Other cylinders are optional.

*U5153 6 and 7-pin cylinders cannot be used with a keyed removable mullion.

Surface and Concealed Vertical Rod Extension Kits

Used to extend the height of standard length rods for 7110(F)(8' max), 7120, 7160(F), 7170(F), and 7210 Series exit devices.

Optional Vertical Latches

accessories

Anti-Pry Bracket

Model number: 725

Offers increased security by improving resistance against jamb spreading during a pry attack. When the door is in the closed position, the Anti-Pry Bracket interlocks in position between the exit device strike and frame preventing the strike and exit device latch from being separated.

retrofit kits

Schlage® Cam and Housing Assembly

Part Number: 60-7000-0815

Von Duprin® Tailpiece

Part Number: 34-1145-1005-048

M300

handing instructions

Handing

Left Hand Reverse: Hinges on left, opens outward. For handed devices, specify LHR.

Right Hand Reverse: Hinges on right, opens outward. For handed devices, specify RHR.

Note: Doors with Panic-Exit and Fire Exit hardware must open out. Therefore, hands must be reverse bevel.

Rim Devices

7100(F), 7150(F), 7200(F) Series

These devices are non-handed.

Vertical Rod Devices, Surface and Concealed

7110(F), 7120(F), 7160(F), 7170(F), 7210(F), 7220 Series

Remove four screws and vertical lifter assembly. Turn device to opposite (180 degrees) orientation, insert lifter assembly and reinstall screws.

NOTE: Lifter must fit under lift block as shown.

handing instructions

Effective April 16, 2010, the following Free-Wheeling exit device lever trims will ship with a new universal lever spring and hub:

626F, 627F, 628F, 629F, 690F, 691F

The new universal spring allows the handing for the trim to easily be changed without the need for any additional parts. This means no more red or blue springs!

To accommodate the new universal spring, a slight modification to the door prep has been incorporated. In anticipation of this change, revised door templates for these functions were posted to our website in August 2009.

The required trim handing should be specified on the purchase order and will be set at the factory.

The following details changing the handing in the field:

Tools Needed: Needle Nose pliers, Crescent wrench

Notes:

During change ensure black gear does not rotate.

Please wear safety glasses and be aware of spring tension on spring hub upon removal and assembly.

Light lubrication is recommended under flat gear, white lithium grease can be used.

- Remove cotter pin
- Remove castle nut
- Remove washer
- Carefully pull up on spring hub to disengage spring
- Remove spring and note orientation
- Remove lever handle
- Pick-up flat gear, flip and orient stop on opposite side of stop post. See pictures for hand orientation.
- Install spring upside down from original orientation and place spring leg on opposite side of stop post from original installation orientation
- Install lever 180 degrees from original position
- Install spring hub with stamped number in the 6 o'clock position
- Rotate spring leg around with needle nose pliers to engage notch in spring hub, refer to pictures for reference position. Press down on spring hub to ensure complete engagement.
- Install washer
- Install castle nut, do not over tighten, verify by insuring lever returns horizontally on its own
- Install cotter pin

Left Hand Reverse Shown

Left Hand Reverse gear & spring orientation

Right Hand Reverse gear & spring orientation

Notch for spring to engage for left hand reverse operation

Spring orientation for right hand reverse operation

surface vertical rod exit devices

If top latch does not engage properly, check alignment. When locked, latch bolt should not be preloaded by strike (**Area A**). Shim or reposition strike if necessary.

Bolts extend automatically when door closes and top strike hits tripping lever. Top bolt should retract flat. Bottom bolt should travel 1/2" and engage 3/8" into strike in down position, without dragging on floor surface in up position.

Rod Adjustment

1. Remove active case cover screws and cover.
2. Remove rod guide cover screws and rod guide covers. Tilt rods, top and bottom, out of engagement in active case and out of rod guides.
3. **Adjust top rod first.** Push up on top rod to fully retract top latch with hold back feature engaged. With device in dogged position (panic devices) or touch-bar fully depressed (fire devices), adjust top rod so that the square head of the rod connector slides into engagement in the active case. Shorten rod an additional 1/2 turn.
4. **Adjust bottom rod.** With top rod engaged, top latch retracted in hold back position, and touch bar dogged or fully depressed, adjust bottom rod so that the deadbolt clears the strike by 1/16". The bottom rod should be in position in the active case with the square head of the connector hanging in the slide.
5. **Check device operation** by opening and closing the door. When present, operate the device with the outside trim. An additional minor adjustment may be required for full retraction and correct strike engagement.
6. Reinstall the rod guide covers and the active case cover.

Maintenance

1. Periodically remove covers and coat mechanisms with an appropriate lubricant. This is regularly required in corrosive environments for proper product operation.
2. Check mounting fasteners periodically. Retighten if found loose. Apply screw locking compound or change part fasteners if screws continue to back out.
3. Periodic checks and adjustments of rods may be required to compensate for door or frame sag.

concealed vertical rod exit devices

Rods should move freely inside door. Bolts extend automatically when door closes and top strike is tripped. Top bolt should retract flat. Bottom bolt should travel 1/2" and engage 3/8" into strike in down position, without dragging on floor surface in up position.

If top latch does not engage properly check alignment. When locked, latch bolt should not be preloaded by strike (**Area A**). Shim or reposition strike if necessary.

Rod Adjustment for Bolt Throw

1. Remove Latch assembly cover screws and cover.
2. Use 3/32" Allen wrench to loosen set screws **C₁** and **C₂**.
3. Adjusting screws **B₁** and **B₂** only provide fine rod adjustment. If screws bottom out before proper device operation, door and device must be removed. Larger adjustments may then be made either by threading rod in or out, or by moving cotter pin to different hole in rod.
4. **Adjust top rod first.** With device in dogged position (panic devices) or touchbar fully depressed (fire devices), adjust top rod so that the top latchbolt is flush and the hold back feature is engaged. Lengthen top rod an additional 1/2 turn.
5. **Adjust bottom rod.** With top latch retracted in hold back position, and touch bar dogged or fully depressed, adjust bottom rod so that the deadbolt clears the strike by 1/16". The bottom rod should be in position in the active case with the square head of the connector hanging in the slide.
6. **Check device operation** by opening and closing the door. When present, operate the device with the outside trim. An additional minor adjustment may be required for full retraction and correct strike engagement.
7. When finished, lock adjusting screws in place with Allen set screws.

Caution: To avoid thread damage and provide positive locking, be sure Allen set screws engage flats on adjusting screws.

Maintenance

1. Periodically remove covers and coat exposed mechanisms with an appropriate lubricant. This is regularly required in corrosive environments for proper product operation.
2. Check mounting fasteners periodically. Retighten if found loose. Apply screw locking compound or change part fasteners if screws continue to back out.
3. Periodic checks and adjustments of rods may be required to compensate for door or frame sag.

troubleshooting guide

1. Many problems with the operation of exit devices are caused by factors other than the device itself. Among the most common is a misalignment or an improper fit of the door within the frame.
2. Another common source of problems is improper installation. Even if all cutouts and screw holes are properly located, exit devices must be securely fastened to properly reinforced doors. Hollow doors and frames with a structural thickness (metal skin plus reinforcement, or solid hardwood) must have at least three full screw threads to be considered reinforced.
3. Most problems with dogging occur on vertical rod devices. When the dogging function is hard to engage or will not work at all, the rods may be incorrectly adjusted allowing the mechanism to bottom out. Readjust rods per the device instructions or as outlined on the previous pages.

how to order parts

To order parts, use the appropriate part number and specify finish if necessary.

For example, to order 10 curved lip strikes for any function:

| Quantity | Part Number | Description |
|----------|------------------|--------------------|
| 10 | 50-8800-2023-FIN | Strike, Curved Lip |

To order 5 lockbody assemblies for a Passage or Closet Latch function (8801FL):

| Quantity | Model Number | Description |
|----------|--------------|--|
| 5 | LBDY8801FL | Lockbody Assembly , Including Armor Front and Strike |

For assistance, contact your authorized Yale distributor, sales agency or visit our website at www.yalelocks.com.

finish chart

| ANSI/BHMA Code | Finish Description |
|----------------|---|
| 605 | Bright Brass, Clear Coated |
| 606 | Satin Brass, Clear Coated |
| 609 | Satin Brass, Blackened, Satin Relieved, Clear Coated |
| 611 | Bright Bronze, Clear Coated |
| 612 | Satin Bronze, Clear Coated |
| 613 | Dark Oxidized Satin Bronze, Oil Rubbed |
| 613E | Dark Oxidized Satin Bronze - equivalent |
| 616 | Satin Bronze, Blackened, Satin Relieved, Clear Coated |
| 618 | Bright Nickel Plated, Clear Coated |

| ANSI/BHMA Code | Finish Description |
|----------------|--|
| 619 | Satin Nickel Plated, Clear Coated |
| 620 | Satin Nickel Plated, Blackened, Satin Relieved, Clear Coated |
| 625 | Bright Chrome Plated |
| 626 | Satin Chrome Plated |
| 629 | Bright Stainless Steel |
| 630 | Satin Stainless Steel |
| 693 | Black Painted |
| 722 | Black Oxidized Bronze, Oil Rubbed |

For "X" in part number, specify finish required:

- For 605, 606, 609, 611, 612, 613, 613E, 616, 618, 619, 620, 625, 626, 693 or 722 substitute "X" with "2"
- For 629 or 630 substitute "X" with "7"

Example = 50-8847-7219 would be an armor front used for an 8847 mortise lock in 630 finish.

FINISH CARE

8800 Series Mortise Locks are designed to provide the highest standard of product quality and performance. Care should be taken to ensure a long-lasting finish. When cleaning is required, use a soft damp cloth. Using lacquer thinners, caustic soaps, abrasive cleaners or polishes could damage the coating and result in tamishing.

MAINTENANCE

Yale® 8800 Series Mortise Locks are manufactured to be maintenance-free under normal operating conditions and environments. Subjection to extremely heavy traffic and/or particularly dusty and dirty environmental conditions, however, may eventually cause unsatisfactory operation due to slow-moving parts or sticking cylinders. In this case, it may be necessary to clean and re-lubricate the lockset to maintain optimum performance. To clean the lockset mechanism, use a penetrating or solvent type lubricant to loosen sticking components, then lubricate with lithium grease. To free sticking or jammed cylinders, lubricate with graphite or a non-oily lubricant (such as Lock-EZE). Do not use petroleum-based lubricants in the cylinder keyway.

trim: escutcheon plates

When ordering escutcheons separately, specify the model number of the escutcheon plate suffixed with the spacing number. The spacing number indicates the hole preparation in the escutcheon plate to coordinate with the lock functions (i.e. CN87 x 201).

- 260, 261, & 262 used with CN escutcheon only. These are an assembly which includes indicator.
- 262 used with CN88 only

| Model Number | Description |
|--------------|----------------|
| CN87 | Inside for CN |
| CN88 | Outside for CN |
| SL87 | Inside for SL |
| SL88 | Outside for SL |
| E1-87 | Inside for E1 |
| E1-88 | Outside for E1 |
| E2-87 | Inside for E2 |
| E2-88 | Outside for E2 |
| E3-87 | Inside for E3 |
| E3-88 | Outside for E3 |
| E4-87 | Inside for E4 |
| E4-88 | Outside for E4 |

handing/troubleshooting

handing the 8800 mortise lock

Units Shipped Prior To March 2012

HANDING THE LATCHBOLT

1. Locate and depress spring plate mechanism in one of the rectangular holes.
2. While depressing spring plate pull latchbolt head.
3. Rotate head for desired handing.
4. Push head into lockbody until secured.
5. Operate several times to insure operation.

Units Shipped After March 2012

HANDING THE LATCHBOLT

1. Insert a flat blade screwdriver into cover slot.
2. Pull back on screwdriver until latchbolt extends past the base front.
3. Rotate head to desired position.

HANDING THE HUBS (LEVER OPERATION)

1. Locate the red mark on locking piece
2. The red mark indicates the locked side
3. Push toggle button to the "Unlock" position
4. With a flat blade screwdriver push red mark on locking piece to rotate locking piece 180° to the desired location
5. The locking piece must be fully rotated 180° for proper operation

troubleshooting

| Installation Trouble Shooting Tips | | |
|---|--|---|
| Problem | Possible Cause | Solution |
| Difficult to operate lock by lever or by key. | Loose (Trim H.M. Doors) (Vibration caused by normal operation of door opening and closing can loosen attaching screws) | Adjust and tighten - as necessary. If screws continually loosen up, use a screw locking compound (such as Loctite) on all attaching screws. |
| | Door is warped or sagging, binding up latch bolt in strike cutout. | Check to see where latch is hanging up in strike. If door is sagging, tightening top hinge screws may solve problem. Hole in strike plate may have to be filed to relieve bind. Doors can warp when weather changes: warm inside - cold outside cool inside - hot outside (Exterior doors painted in a dark color are particularly susceptible to warpage when exposed to direct sunlight.) It may take a few seasonal changes to work out all binding problems. |
| Loose Trim (wood doors) | Wood doors after being installed will sometimes shrink slightly as the building dries out. | Tighten all screws as needed |
| Latch bolt hangs up in lock body | Foreign object in lock body (metal shavings, saw dust, wood particles, mineral ore etc.) | Remove lock from door and remove foreign object from body. *Lubricate if necessary. |
| | Lock body lacks lubrication or lubrication has gummed up with age. | Use penetrating or solvent type lubricant as a cleaning agent to loosen frozen or sticking components. Lubricate with silicon base or Lithium Grease. |
| Cylinder jams up | Dirt or other foreign object may be in keyway affecting operation. | Lubricate cylinder with graphite or other non-oily lubricant (such as Lock-EZE) Do not use oil based lubricants in Keyway. |
