LIMITED WARRANTY

WARRANTY: We make a commitment that our products, at the time of sale to the customer, meet standards applicable to uses recommended by the manufacturer. Our products will offer best service when installed, used and maintained according to our recommendations. If we determine that a product does not meet these standards, the product will, at our option, be replaced, repaired, or credited. This is the exclusive remedy, limited to the customer's purchase price of the product. Damage to the product due to abuse, misuse, improper use, inadequate maintenance, or failure to follow published installation, use and service recommendations automatically voids this warranty. For warranty service, please contact YOUR SUPPLIER, or the Customer Service Department, Plews/Edelmann Division, Route 38 East, Airport Industrial Park, Dixon, IL 61021.

THERE IS NO OTHER WARRANTY, EXPRESSED OR IMPLIED, INCLUDING FITNESS FOR A PARTICULAR PURPOSE. ALL IMPLIED WARRANTIES ARE EXPRESSLY DISCLAIMED. LIABILITY FOR CONSEQUENTIAL OR INCIDENTAL DAMAGES UNDER ANY AND ALL WARRANTIES ARE EXCLUDED TO THE EXTENT EXCLUSION IS PERMITTED BY LAW.

POWER STEERING HOSE

Replacement “O” Ring Assortment

Ideal for Jobbers and Installers for replacing “O” Rings and seals. Replacement components are available by ordering part numbers in content lists below.

NEW – 70011 – Replacement “O” Ring / Seal / Gasket / Plug Assortment

CONTENTS:

Part Number	Size	Description	Quantity
70001	5/16"	Standard “O” Ring	25
70002	3/8"	Viton “O” Ring	25
70003	3/8"	Standard “O” Ring	25
70004	9/16"–18	Type II Teflon Seals	25
70005	16mm	Type III Teflon Seals	25
70006	14mm	Copper Washer	12
70007	16mm	Copper Washer	12
70008–NEW	3/8"–24	Switch Socket Plug	5

Power Steering Tech-Tips

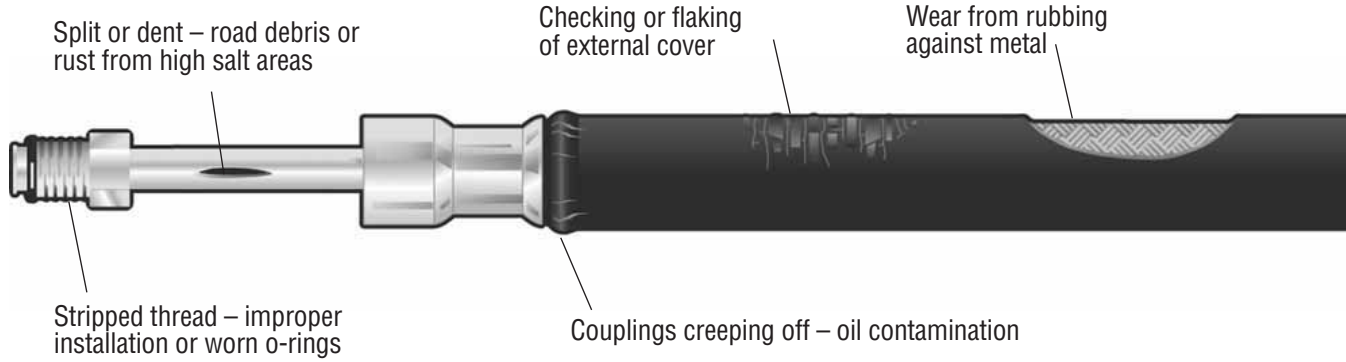

Power Steering Hose Change and System Flush

- Remove hose using open-end wrench or screwdriver.
- Install new hose, hand thread fitting and tighten with open-end wrench.
- Disconnect return line at pump and point to drain pan. Cover pump tube with cap.
- Fill reservoir and start engine.
- Turn wheel side to side, filling reservoir as needed until fluid is clear.
- Stop engine. Remove cap, connect return line and re-check fluid level.

It is always recommended that you replace your return line when replacing a pressure hose. Failure to do so could result in further system damage.

SERVICING YOUR

Identifying Power Steering Problems

Probable Causes

Symptom	Low Tire Pressure	High Internal Leak (Pump or Gear)	Pump Belt Loose	Flow Control Valve Sticking	Low Oil In Reservoir	Air In System	Front End Mis-aligned	Steering Linkage/ Coupler Damaged	Restriction In System
Hard Steering	●	●	●	●	●		●		
Increased Effort		●	●		●				●
Wheel Jerks at Low Speeds			●	●	●	●			
Loose Steering or Excess Wheel Return							●	●	
Vehicle Wanders from Side to Side							●	●	
Poor Wheel Return	●						●		
	Fill Tire To Recommended Pressure	Replace Gear Or Pump	Tighten Pump Belt	Remove Valve Buff Clean And Replace	Fill Reservoir With Oil	Flush And Bleed System	Realign	Replace Ball-Studs Tie-Rods Or Linkage	Flush System Check Hoses For Blockage

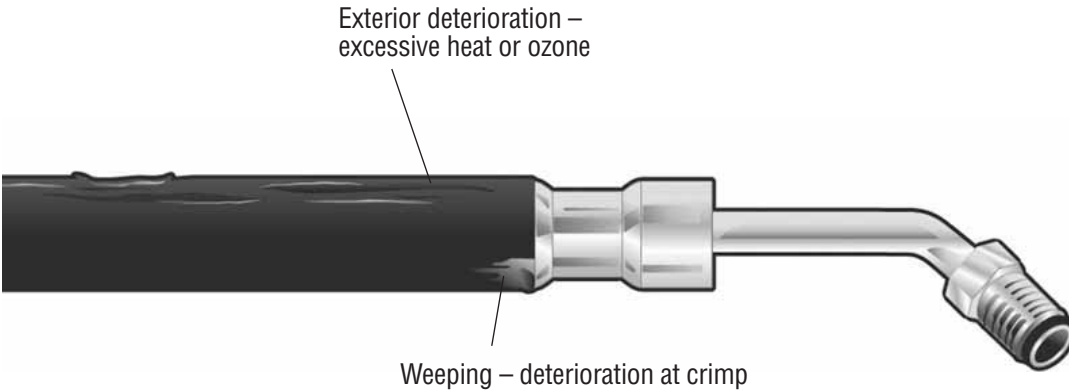

Probable Solutions

Physical Problems

Guidelines for Inspection

- Brittleness or hardness — an early sign of internal wear. The hose has lost its ability to absorb pressure surges.
- Soft, spongy hose — A more serious sign of wear, indicating advanced internal deterioration and probably leakage.
- Leakage of power steering fluid — easily detected by visual inspection of hose at fittings.
- External wear and abrasion — caused by contact with manifold or other engine parts; calls for replacement and realignment of hose.
- Thick, sludgy fluid in pump reservoir — indicates internal hose wear and need for a complete flush of system.

POWER STEERING HOSE

Probable Causes

Symptom	Flow Control Valve Sticking	Low Oil In Reservoir	Air In System	Damper “O” Ring On Spool Valve Cut	Restriction In System	Scored Pump Shaft Bushing/Bearing	Scored Pump Plate	Wear On Cam Ring
Gear Squawk				●				
Growling		●	●		●	●	●	●
Hissing Noise	●		●					
Groan		●	●					
Swish in Pump	●							
Whine in Pump		●	●			●		
	Remove Valve Buff Clean And Replace	Fill Reservoir With Oil	Flush And Bleed System	Replace “O” Ring	Flush System, Check Hoses For Blockage	Replace Bushing	Replace Pump	Replace Pump

Probable Solutions

Audible Problems

Maintenance and Causes of Wear

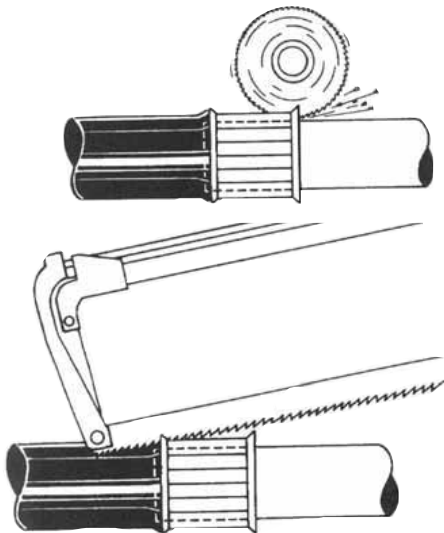

- Inspection of power steering hose eliminates expensive repairing or replacing of the pump or other components.
- Hoses should be replaced after 20,000 – 24,000 miles as preventive maintenance.
- High temperature pulsations cause power steering hoses to deteriorate from the inside. The constant flexing and pressure surges result in the breaking off of small particles of hose, which are carried through the system, and can lead to system malfunction.

INSTALLATION PROCEDURE

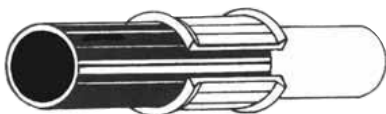

Installation Procedure for Replacing Crimped or Ferruled Power Steering Return Line Assemblies

Note: This is ONLY for return line assemblies and will not work for pressure assemblies.

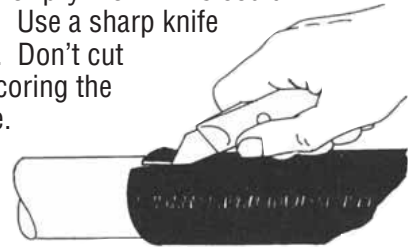

1. Locate hose to be replaced. If possible, for easier access, remove assembly from vehicle. Locate ferrule attaching hose to the assembly.
2. If assembly is removed from vehicle, clamp it with a vise or to a stationary object, such as a table. BE CAREFUL, do not distort assembly when clamping.
3. Using a hacksaw, dremmel tool or other cutting-type tool, carefully cut the ferrule lengthwise, slitting the ferrule from end to end. **IMPORTANT:** Cut only the ferrule. Cutting through the hose can damage the tube or nipple surface. **CAUTION: ALWAYS WEAR EYE PROTECTION WHEN USING A ROTOR TOOL.**

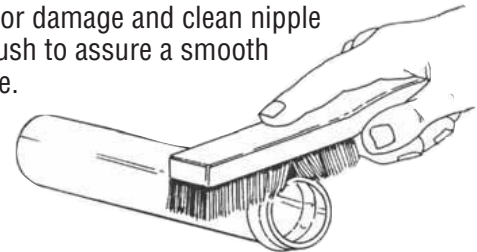

4. After ferrule is split, spread it open and remove from assembly.

5. Remove ferrule and existing hose. If hose is stuck don't force or pry it off. This could damage the nipple. Use a sharp knife to cut or peel it off. Don't cut too deep – avoid scoring the tube/nipple surface.

6. Check nipple for damage and clean nipple with a wire brush to assure a smooth sealing surface.

7. Install new hose and secure with new clamps. Lubricating hose with coolant makes installation over nipple easier. Position new clamp over hose between raised bead and exposed tube surfaces. See below. Tighten clamp to recommended specifications.

8. Reinstall assembly. With engine at operating temperature, check for leaks and tighten clamps as needed.

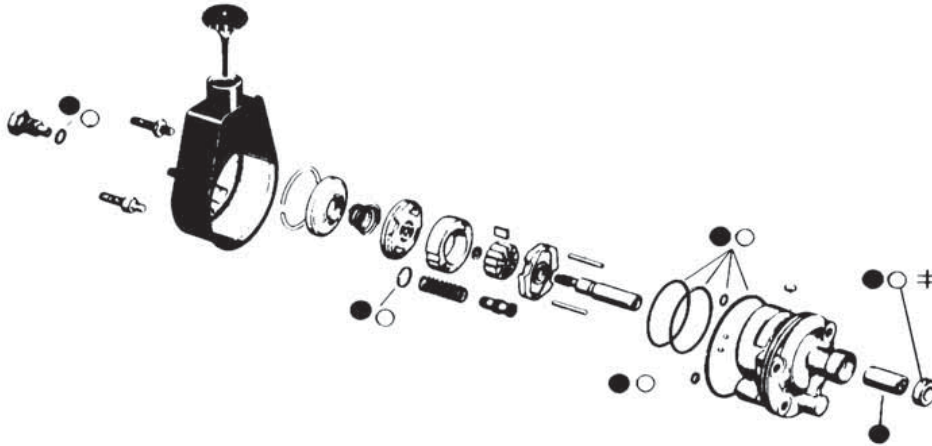

POWER STEERING REPAIR KIT CONTENTS

(Excludes Rack & Pinion)

All repair kits are supplied with detailed instruction sheets including exploded view illustrations and step by step service procedures.

(Parts may vary by type)

REPAIR KITS FOR POWER STEERING PUMPS

● **Parts included with complete rebuilding kit:**

- Housing “O” rings
- External reservoir “O” rings
- Pressure union “O” ring fittings
- Drive shaft bushing/bearing
- Drive shaft seal

○ **Parts included with Pump Seal kit:**

- All above excluding drive shaft bushing/bearing

≠ **Parts included with drive shaft seal kit:**

- Drive shaft seal only

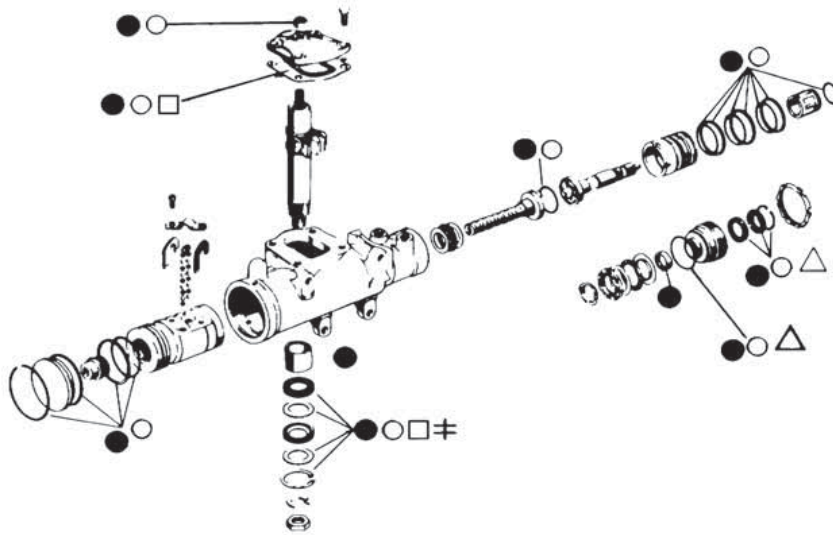

Power steering pump parts **NOT** available in above kits:

- Hard parts like vanes, rotors, shaft, cam ring, plates or slippers

POWER STEERING REPAIR KIT CONTENTS – cont.

(Excludes Rack & Pinion)

REPAIR KITS FOR POWER STEERING GEARS

● **Parts included with complete rebuilding kit:**

- Pitman shaft bearing (most kits)
- Input shaft bearing (most kits)
- Teflon seals (for piston and spool valve)
- Pitman shaft seals, snap ring, input shaft seals, dust covers
- “O” rings
- Housing “O” rings

○ **Parts included with gear seal kit:**

- All above excluding Pitman & input shaft bearings

△ **Parts included with input shaft seal kit:**

- Input shaft seal
- Dust cover
- Snap ring

□ **Parts included with complete Pitman shaft seal kit:**

- Housing cover “O” ring
- Pitman shaft & seals (number of seals may vary)
- Dust cover

≠ **Parts included with lower Pitman shaft seal kit:**

- All above excluding housing cover “O” ring

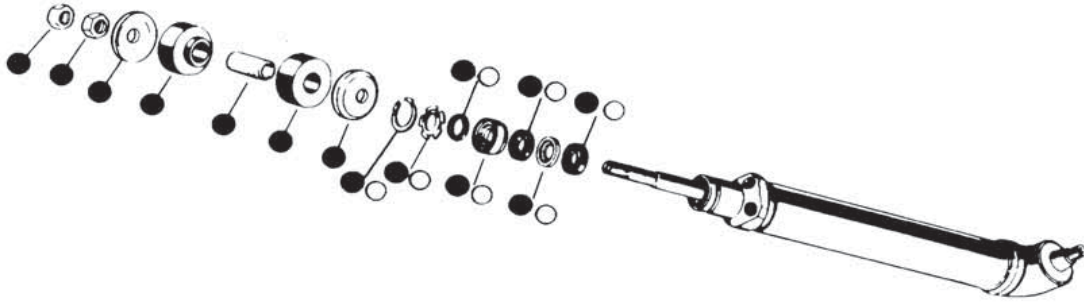

Power steering gear parts **NOT** available in above kits:

- Piston
- Ball bearings, Pitman shaft, piston, spool valve assembly
- Adjuster plug, housing cover

POWER STEERING REPAIR KIT CONTENTS – cont.

(Excludes Rack & Pinion)

REPAIR KITS FOR POWER CYLINDERS

● **Parts included with complete rebuilding kit:**

- Cylinder rod seals
- Washers
- Cylinder rod grommets (link cylinder to frame)
- Spacers
- Cylinder rod boot (not in all kits)

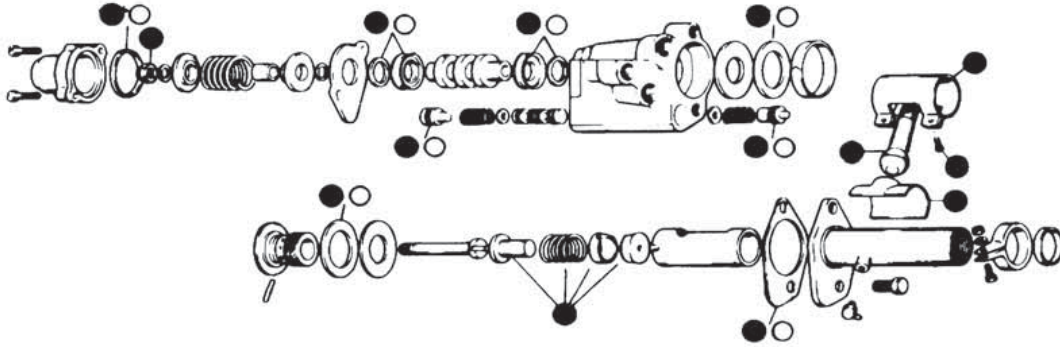

○ **Parts included with Pitman rod seal kit:**

- Snap rings
- Copper washer
- Seal
- Metal washer
- Gasket

POWER STEERING REPAIR KIT CONTENTS – cont.

(Excludes Rack & Pinion)

REPAIR KITS FOR POWER CONTROL VALVES

● **Parts included with complete rebuilding kit:**

- Dust clamp and boot
- Ball stud, ball stud seat and spring
- Cap gasket, gaskets and spool seals
- Adjusting nut
- Bumper spool stop

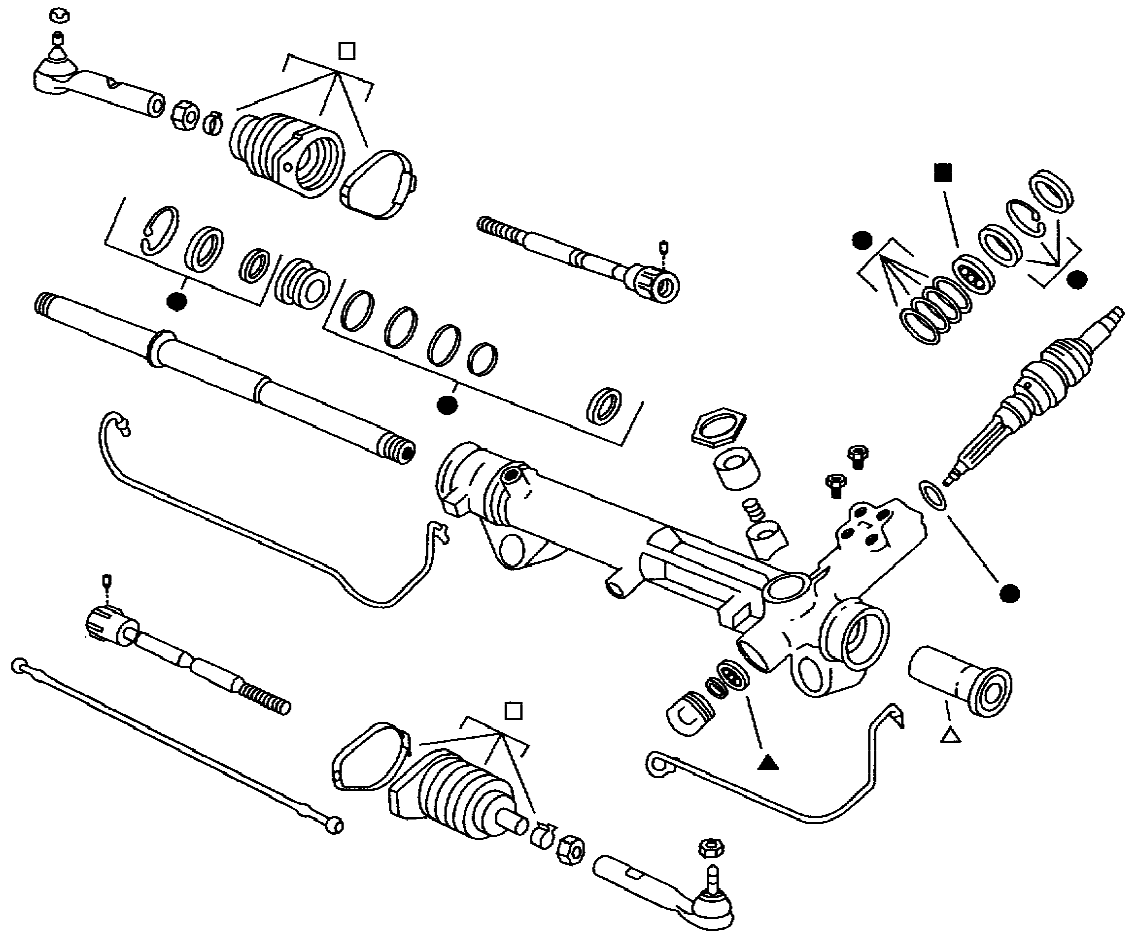

○ **Parts included with control valve seal kit:**

- Spool seals
- “O” rings and bushings
- Housing and valve housing “O” rings, seals and gaskets

POWER STEERING REPAIR KIT CONTENTS – cont.

(For Rack & Pinion)

REPAIR KITS FOR RACK AND PINION

● **Parts included with complete seal kit:**

Contains the seals and miscellaneous hardware necessary for a complete rebuild.

- Teflon seals
- Rubber seals
- “O” rings
- Snap rings and washers

■ **Parts included with upper pinion bearing kit:**

Designed for specific repair of the pinion/hydraulic valve assembly within the rack and pinion unit.

- Bearings

▲ **Parts included with lower pinion bearing kit:**

Designed for specific repair of the pinion/hydraulic valve assembly within the rack and pinion unit.

- Bearings

□ **Parts included with bellow kit:**

Sold separately as left and right bellow kit.

- Bellows
- Clamps

△ **Parts included with mounting kit:**

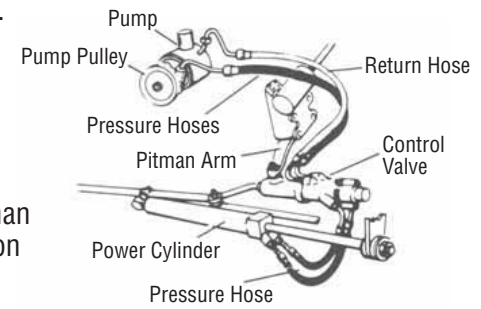

Contains the bushing and hardware necessary to restore stability and absorb vibration.

- Bushings

POWER STEERING SYSTEMS

SYSTEM
PUMP &
GEAR
IDENT.

There are five major systems using power steering hose assemblies: Linkage (or Booster), Power As-

Linkage (Booster) System

- **3 Pressure Hose Assemblies**
- **1 Return Hose Assembly**

A pump supplies hydraulic pressure to control valve attached to pitman arm. This valve senses movement of steering wheel in either direction and directs the proper amount of fluid pressure to power cylinder.

SYSTEM &
COMPONENT
IDENT.

PASS.
CARS

The power cylinder is attached to car's frame on one end and to intermediate rod on the other end.

As fluid pressure is applied to one end or the other of power cylinder, it "pushes" or "pulls" intermediate rod to effect steering boost.

LIGHT
TRUCKS

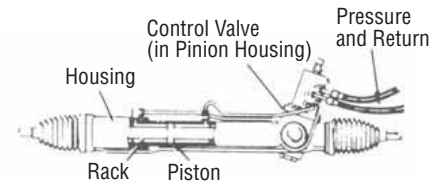

Spent fluid is returned to pump reservoir via return line hose.

This system is found in Fords, Mercurys, early Chevrolets and late model Corvettes.

Power-Assisted Rack and Pinion System

- **1 Pressure Hose Assembly**
- **1 Return Hose Assembly**

This system is similar to integral type in that the power cylinder and control valve are in the same housing.

MEDIUM/
HEAVY
TRUCKS

BUSES

The power piston is actually part of the rack and the rack housing acts as the cylinder. The control valve is located in pinion housing.

Rotation of steering wheel (pinion) turns valve to direct hydraulic pressure to either end of rack piston.

HOSE
NUMERICAL

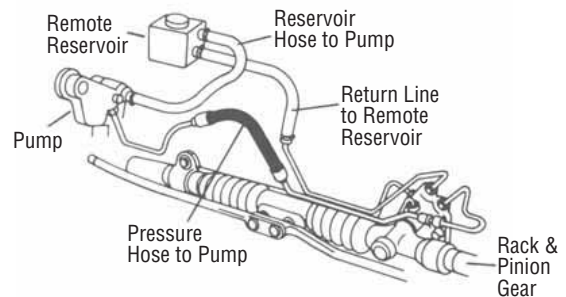

Spent fluid is returned to pump reservoir via return line hose.

This type of system is found on many import cars and light trucks and some late model U.S. cars.

Remote Reservoir System

- **1 Pressure Hose Assembly**
- **1 Return Hose Assembly**
- **1 Reservoir Hose**

This system is common on many small, front wheel drive vehicles and vans.

REPAIR
KITS

KIT
NUMERICAL

Car manufacturers use remote reservoirs to maximize space under the hood.

Fluid is transported from reservoir to pump through the reservoir hose.

ILLUSTRATIONS

The pump then supplies the pressure to transport fluid through the system and returns it to the remote reservoir.

POWER STEERING SYSTEMS

Hydro-Boost System

- 2 Pressure Hose Assemblies
- 3 Return Hose Assemblies

In this system, hydraulic pressure is supplied by power steering pump to activate a power brake booster system (in contrast to conventional vacuum-assisted power brake).

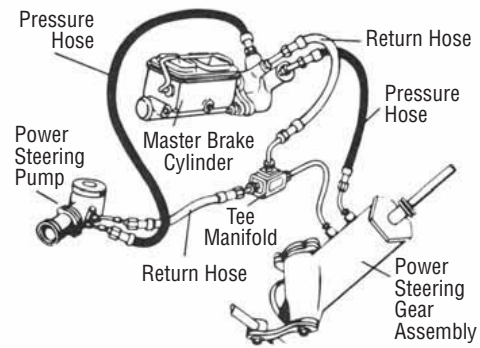

This system has a valve assembly which meters power steering pump pressure to a brake booster pressure chamber connected to brake master cylinder.

Movement of brake pedal actuates system to provide a variable boost to pedal force required to stop the car.

In addition to normal pressure and return lines used in this system, additional pressure and return lines are utilized from pump to brake master cylinder.

Vehicles using this system are late model Thunderbirds, Lincolns and Mercurys, some late model GM passenger cars and light trucks.

NOTE: Before installing a Hydro-Boost hose assembly, pump brake pedal several times to reduce pressure in the system's accumulator.

Integral System

- 1 Pressure Hose Assembly
- 1 Return Hose Assembly

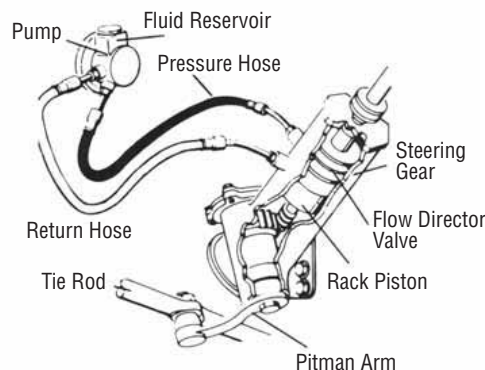

The power cylinder and control valve functions are combined into one unit located at the end of the steering column.

Here, a pressure flow director valve senses movement of steering wheel and directs pressure to one side or the other of a rack piston (which is geared to pitman arm shaft).

As the rack piston moves up or down under pressure, it applies needed boost to pitman arm. This turns the wheels.

Spent fluid is returned to pump reservoir via return line hose.

Vehicles using this system are late model GM cars and light trucks, Chrysler and Plymouth standard sizes, late model Fords, Lincolns and Mercurys.

	BMW				IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.				V-8 472 ENG.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code. IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

	IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

	IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.

IMPORTANT: PLEASE NOTE. To select correct replacement parts, it may be necessary to identify the code character for the engine by looking at the VIN (Vehicle Identification Number) located on the dash panel. For 1981 and newer cars, refer to the 8th digit of VIN for the correct engine code. For 1980 and older cars, refer to the 5th digit of VIN for the correct engine code.				ASTRO - Continued
